

# Annual Report

KBC Group

2024

# KBC group passport

## Our area of operation

We are an integrated bank-insurance group, catering mainly for retail, private banking, SME and mid-cap clients. Our core markets are Belgium, the Czech Republic, Slovakia, Hungary and Bulgaria. We are present to a limited extent in several other countries.

## Our goal and ambition

Through our activities, we want to help our clients to both realise and protect their dreams and projects.

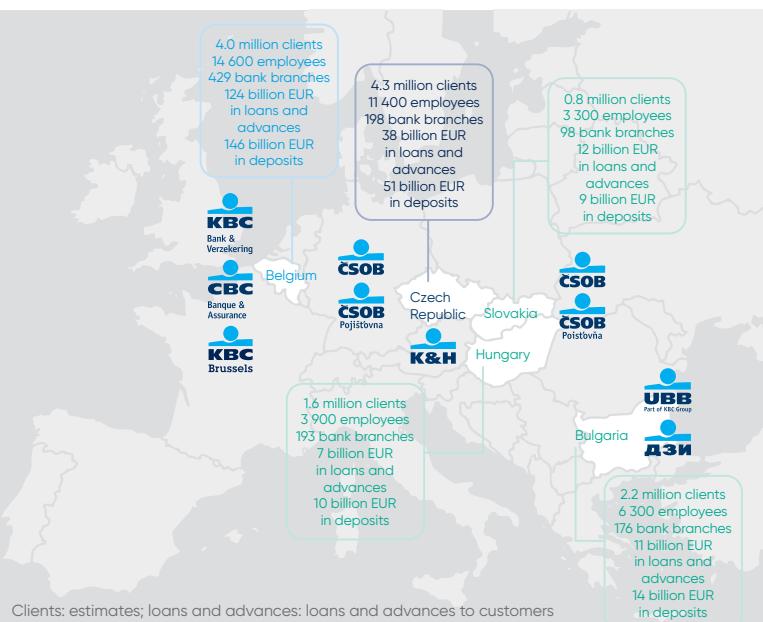

It is our ambition to be the reference for bank-insurance in all our core markets.

## Our clients, staff and network as at 31-12-2024

Clients	approximately 13 million
Staff	approximately 40 000
Bank branches	1 106
Insurance network	283 agencies in Belgium, various distribution channels in Central and Eastern Europe

## Our ratings as at 31-12-2024

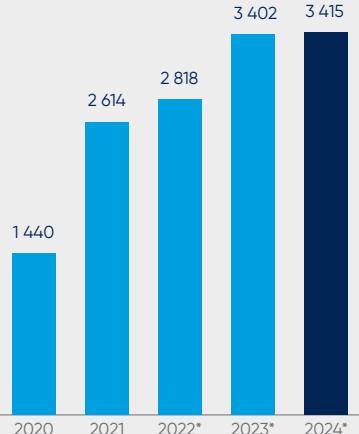

Long-term debt ratings	Fitch	Moody's	S&P's
KBC Bank NV	A+	A1	A+
KBC Insurance NV	–	–	A
KBC Group NV	A	A3	A-
Sustainability ratings (selection)	CDP	Sustainalytics	S&P Global
KBC Group	A	10.9	67/100

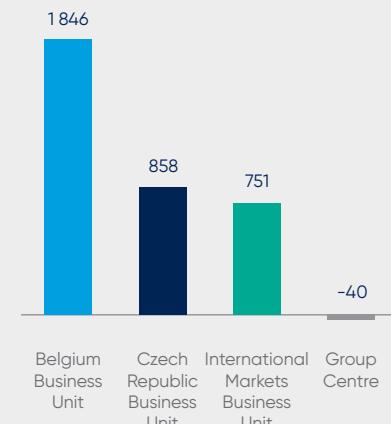

## KBC group in 2024

5.3 million clients have already used Kate, and the number of cases resolved autonomously by Kate continues to rise	3,4 billion EUR in net profit	Solid capital and liquidity ratios
Challenging geopolitical and economic conditions	First sustainability report under CSRD included in this annual report	Successful conclusion of 1.3-billion-euro share buyback programme
Recognition from several external entities for our digitalisation and sustainability strategy	10th anniversary of Start it @KBC 10 years of supporting numerous start-ups	Advancing our strategy with Save Time and Earn Money (S.T.E.M.): the Ecosphere

## Net result (in millions of EUR)

## Breakdown of net result by business unit (2024, in millions of EUR)

Key figures	2024	2023	2022
<b>Consolidated balance sheet (in millions of EUR)</b>			
Total assets	373 048	346 921	354 545
Loans and advances to customers	192 067	183 613	178 053
Securities	80 338	73 696	67 160

- 362** EU taxonomy – detailed tables
- 414** Management certification
- 414** Contact details and calendar

*Statutory annual report:* we have incorporated the content of the annual report required by law into the 'Report of the Board of Directors', which also contains non-compulsory information. We have combined the reports for the company and consolidated financial statements. Other reports and the websites we refer to do not form part of our annual report.

*Company name:* 'KBC', 'we', 'the group' or 'the KBC group' refer to the consolidated entity, i.e. KBC Group NV plus all the group companies included in the scope of consolidation. 'KBC Group NV' refers solely to the parent company.

*Glossary:* a list of the most important financial ratios and terms used (including the alternative performance measures) can be found at the end of this report.

*Translation and versions:* The Annual Report is available in Dutch and English ESEF (European Single Electronic Format) versions and in Dutch, English and French PDF versions. The Dutch ESEF version is the original version; the other language translations are unofficial versions. We have made every reasonable effort to avoid discrepancies between the different language and format versions. However, should such discrepancies exist, the Dutch ESEF version will take precedence.

*CSRD:* this is the first report to provide sustainability information in line with the new Corporate Sustainability Reporting Directive, which contains new EU rules that enhance and update social and environmental reporting, including business conduct. This information can be found in the 'Sustainability statement' section. We specifically note that, when we use terminology such as 'green' and 'sustainable' elsewhere in this annual report, these terms do not suggest in any way that what is described is already (fully) aligned with the EU Taxonomy.

*Disclaimer:* The expectations, forecasts and statements regarding future developments that are contained in the annual report are based on the assumptions and assessments we made when drawing up this report at the start of March 2025. By their nature, forward-looking statements involve uncertainty. Various factors could cause actual results and developments to differ (considerably) from the initial statements.

# Report of the Board of Directors

# Statement by the Chairman of the Board of Directors and the Chief Executive Officer

This annual report presents an overview of last year's achievements and initiatives, highlighting the key financial and non-financial results and strategic developments as well as the steps we have taken to further optimise the service we provide to our clients. We also share our vision for the future and set out how we are preparing for the challenges and opportunities that lie ahead.

## Kate is becoming an increasingly important part of our digital strategy

**Johan Thijs:** "We have always been at the forefront of new digital developments, which we combine with the power of human interaction. One of the most visible examples of our digital approach is our personal digital assistant Kate, who is constantly enhanced to provide maximum convenience for our clients. We are pleased to say that Kate is a huge success. At year-end 2024, no fewer than 5.3 million clients had already used Kate, again marking a considerable increase from the year-earlier figure of 4.2 million clients. The number of cases resolved fully autonomously by Kate also continues to grow: at year-end 2024, this stood at roughly 69% in Belgium and 71% in the Czech Republic, compared to 63% and 66%, respectively, at year-end 2023.

By combining Kate and a few other concepts and building blocks previously launched, such as Digital First and Kate Coins, and incorporating them in ecosystems, we are able to offer our clients a new type of service, supporting them – through our distribution channels – every step of the way in their search for solutions to housing, mobility, healthcare and other issues, using our own financial products and services as well as those of our partners and suppliers. This enables our clients to save and earn money in and beyond the traditional banking and insurance environment. We summarise this next step in our digital strategy as 'S.T.E.M., the Ecosphere', with S.T.E.M. standing for 'Save Time and Earn Money'.

**Koenraad Debackere:** "We also receive external recognition for our continued successful efforts towards innovation and providing our clients with maximum convenience based on our strategy. We are particularly proud that independent international consulting firm SIA Partners named KBC Mobile the world's best banking app in 2024. Moreover, SIA Partners also awarded Bolero a top position in 2024 as one of the very best investment apps available today, and Euromoney named several banks of our group Best Digital Bank in their respective countries.

## Sustainability is integral to our business model and strategy

**Johan Thijs:** "We believe that, as a bank-insurer, we are uniquely positioned to contribute to a sustainable and resilient future and to truly make a change in the daily lives of all our clients. We support our clients on their journey towards greater sustainability, we have defined concrete climate indicators for carbon-intensive sectors in our loan portfolio, which we monitor closely, and we joined various international

initiatives related to climate change, the environment and sustainability. We also successfully issued a new green bond with a maturity of eight years for an amount of 750 million euros, marking the first issue under our updated Green Bond Framework. The proceeds are used towards energy-efficient buildings, renewable energy transactions and environmentally friendly transport.

**Koenraad Debackere:** "Our sustainability efforts are also appreciated by external parties, as is reflected in our excellent sustainability ratings, including our CDP score A and our inclusion on the Financial Times' list of Climate Leaders.

This is the first year in which we also disclose sustainability information as required by the Corporate Sustainability Reporting Directive, or CSRD for short, which contains new EU rules on mainly social and environmental reporting that should help investors and stakeholders assess companies' sustainability performance and impact. Information about how KBC continues its sustainability efforts can also be found on our website, [www.kbc.com](http://www.kbc.com), and in our Sustainability Report.

## Focus as a success factor

**Koenraad Debackere:** "Our core business remains bank-insurance in a clear selection of five core markets. Having sold our Irish portfolios in 2023, our focus is now on Belgium, the Czech Republic, Slovakia, Hungary and Bulgaria. We view our presence in these countries as a long-term commitment that involves building sustainable relationships with our local clients. The goal is to know and understand those clients better, pick up signals effectively and respond to them proactively, offer tailored products and services, and focus on the sustainable development of the different communities in which we operate. We want to consolidate our presence there by means of organic growth and/or attractive acquisitions while taking into account strict strategic and financial criteria.

Over the past few years, we achieved this in Bulgaria in particular, where we acquired NN's Bulgarian pension and life insurance business and especially Raiffeisenbank Bulgaria, allowing us to significantly strengthen our position in this important home market. As a result, in 2024 we focused mainly on the continued operational integration of the new Bulgarian operations, in addition to the further settlement of our exit from Ireland."

Johan Thijs

Koenraad Debackere

### Once again a strong performance in challenging conditions

**Johan Thijs:** "In 2024, we posted an excellent net result of 3.4 billion euros. Our income benefited from factors including higher net interest income, higher insurance revenues (although offset by higher claims due to adverse weather conditions, such as storm Boris) and particularly strong net fee and commission income, whereas our trading and fair value income and other income dropped. Our lending went up by 5% and our customer deposits, excluding the volatile deposits at KBC Bank's branches abroad, grew by no less than 7%, supported by the successful initiatives to secure money released after the one-year Belgian State Note matured. Although our impairment charges were somewhat higher, our credit cost ratio remained far below the long-term average. Our costs, excluding bank and insurance tax, rose slightly but remained perfectly in line with our guidance. Finally, just like last year, our results also benefited from one-off items relating to the sale of our Irish portfolios. Our group's liquidity position remained particularly strong, as reflected in our long-term and short-term liquidity ratios, i.e. an NSFR of 139% and an LCR of 158%, and we maintained our very robust capital position, which resulted in a fully loaded common equity ratio of 15.0% at year-end 2024. We propose to the General Meeting of Shareholders a gross total dividend of 4.85 euros per share entitled to dividend, comprising an interim dividend of 1 euro and an exceptional dividend of 0.70 euros, both of which were paid in 2024, and a final dividend of 3.15 euros, payable in May 2025. Last but not least, at the end of July 2024 we successfully completed the share buyback programme launched in August 2023. We repurchased around 21 million treasury shares in total under this programme, involving a total amount of 1.3 billion euros."

### The economic environment in 2024 and beyond

**Koenraad Debackere:** "2024 was a year of distinct growth divergence around the globe. The most robust growth dynamics were seen in the US, supported by private consumption and government spending. By contrast, weak euro area growth suffered from cautious consumers and few budgetary incentives with a European industrial policy yet to take more shape. Its latest stimulus programme notwithstanding, China was unable to overcome the structural problem of overcapacity and deflationary trends. The disinflationary trend in the US and the euro area remained intact in 2024, despite persistent core inflation driven by services prices. Against that background, both the ECB and the Fed initiated the easing cycle for their key rates in 2024.

The prospect of trade disputes and geopolitical tensions impacts the growth and inflation expectations for 2025. The Fed is likely to respond more vigorously to inflation and implement a more moderate easing process, whereas the ECB is expected to assign more weight to the downward impact on growth than to potentially slightly higher inflation. The laborious budget drafting process in a number of euro area Member States is a point of concern for 2025, as it may give rise to higher risk premiums on their public debt. Our strong performance in these challenging conditions is obviously testament to our solid foundations and future-oriented strategy but, most of all, it reflects the trust you, our dear client, employee, shareholder or other stakeholder, have placed in us and for which we thank you sincerely."

# Our business model

## How do we create sustainable value?

Our value creation

Our model

Our environment

Our capitals

As a banker, we see to it that our clients are able to save and invest in a well-informed manner and that we actively offer them sustainable investment products. In this way, every client can grow their assets in keeping with their personal wishes and risk profile, and call on our expertise to assist them. We use the deposits our clients entrust to us to provide loans to individuals, businesses and public authorities, thus keeping the economy turning. We also hold a portfolio of investments, which means we invest in the economy indirectly too. At the same time, we fund specific sectors and projects, such as the social profit sector and infrastructure projects that have a major impact on the domestic economy.

As an insurer, we enable our clients to operate free of worry and to limit their risks. We work hard every day to provide the best insurance cover at a fair price and we invest in a high-quality claims-handling service. What's more, we use our knowledge of the causes of accidents to develop accident prevention campaigns and we have a long-standing tradition of working with organisations involved in road safety, welfare and victim assistance.

We also offer our clients a variety of other services that are important to them in their everyday lives, including payments, cash management, trade finance, leasing, corporate finance, and money and capital market products. In this way too, we contribute to the economic system.

In all these activities, we seek to take account of the impact on society and the environment, which we translate into concrete targets. At the same time, we have made a conscious choice to enhance our positive impact on society – where possible – by focusing on areas where we can make a difference as a bank-insurer. The areas in question include financial literacy, environmental awareness, entrepreneurship and the issue of longevity and health. In our business operations, we also prioritise areas such as cyber risk, anti-corruption measures, climate change and other environmental aspects.

**“** We strive to make our clients' financial lives easier in a proactive manner, in which we go beyond pure banking and insurance products alone. The ultimate intention is to support them every step of the way in their search for solutions to housing, mobility, energy and other issues.

In terms of climate, we as a bank-insurer have a direct influence on climate change through our own energy consumption. More important, however, is our indirect influence, through lending, holding an investment portfolio, providing investments to clients and insuring counterparties who can have a direct impact on the climate. We ourselves also feel the impact of climate change. Examples include higher levels of claims under the insurance we provide relating to consequences of extreme weather conditions and the impact on our loans or investments when relevant counterparties suffer the negative consequences of climate change or the transition to a lower-carbon society. We carefully consider these factors, not only to reduce or prevent adverse consequences, but also to contribute actively by launching sustainable products and services. We closely track our performance in this regard, to which end we apply specific targets. For several years now, we have been expanding the scope of our Sustainable Finance Programme to include other environmental aspects, such as biodiversity and circularity.

What's more, as a major player in each of our core countries, we form part of the local economic and social fabric. We make an important contribution to employment in all our core markets and, as such, recognise that we have a significant impact on the lives of our staff. We encourage responsible behaviour on the part of our employees and offer them a fair reward for their work, thereby contributing to the welfare of the countries in which we operate.

## How do we create value?

	Raw materials	Activities
Financial capital	 <p>Total equity of <b>24 billion</b> euros  <b>271 billion</b> euros in deposits and debt securities</p>	<p><b>Goal and ambition</b></p> <p>To offer proactive and data-driven solutions to meet our clients' needs. Environment and society	 <p><b>Direct</b> use of electricity, gas, water, paper, etc.  More important <b>indirect</b> environmental and social impact through lending, investment portfolio, funds, insurance, etc.</p>	<p><b>Most relevant SDGs for the group</b>  (more details are provided in our 'Sustainability statement')</p> 

## Results (selection, 2024)

## Goals and term

(results: see 'Our strategy')

- Net profit of **3.4 billion** euros
- Solid capital and liquidity ratios
- Cost/income ratio of **43%** and combined ratio of **90%**
- **5%** growth in loans and advances to customers
- **13%** growth in assets under management
- **7%** growth in customer deposits

- Growth in net interest income, insurance revenues and total income (2027)
- Growth in operating expenses excluding bank and insurance tax (2027)
- Combined ratio (2027)
- Credit cost ratio (through-the-cycle)

- **2.7 billion** euros in remuneration paid to our staff
- Firmly embedded PEARL+ business culture
- Around **194 000** registered training days
- Staff turnover: **13.5%**
- Diversity: **26%** women in top management (top 300)

- Annual employee engagement surveys

- Innovative digital, AI and data-driven approach
- Success of digital assistant **Kate**: the proportion of cases resolved E2E by Kate stood at approximately **70%** in Belgium and the Czech Republic.
- Focus on simplification and straight-through processes

- Share of digital sales (2026)
- Straight-through processing score (2026)

- **14.2 billion** euros in interest paid to clients and counterparties
- Stakeholder interaction process by country
- Aggregate **1.2 billion** euros paid in income taxes and bank and insurance taxes
- Successful completion of a 1.3-billion-euro share buyback programme in 2023-2024

- Dividend payout ratio and surplus capital payout
- Client NPS score (2026)
- Share of bank-insurance clients (2026)

- Focus on environmental awareness initiatives, the issue of longevity and healthcare, financial literacy initiatives and promoting entrepreneurship
- **51 billion** euros in responsible investment funds
- Various environmental and sustainability targets

- Responsible investment funds (2025 and 2030)
- Reduction in own CO<sub>2</sub> emissions (2030)
- Share of renewable energy loans (2030)
- Greenhouse gas intensity targets, for various sectors (2030 and 2050)

## What makes us who we are?

Our value creation

Our model

Our environment

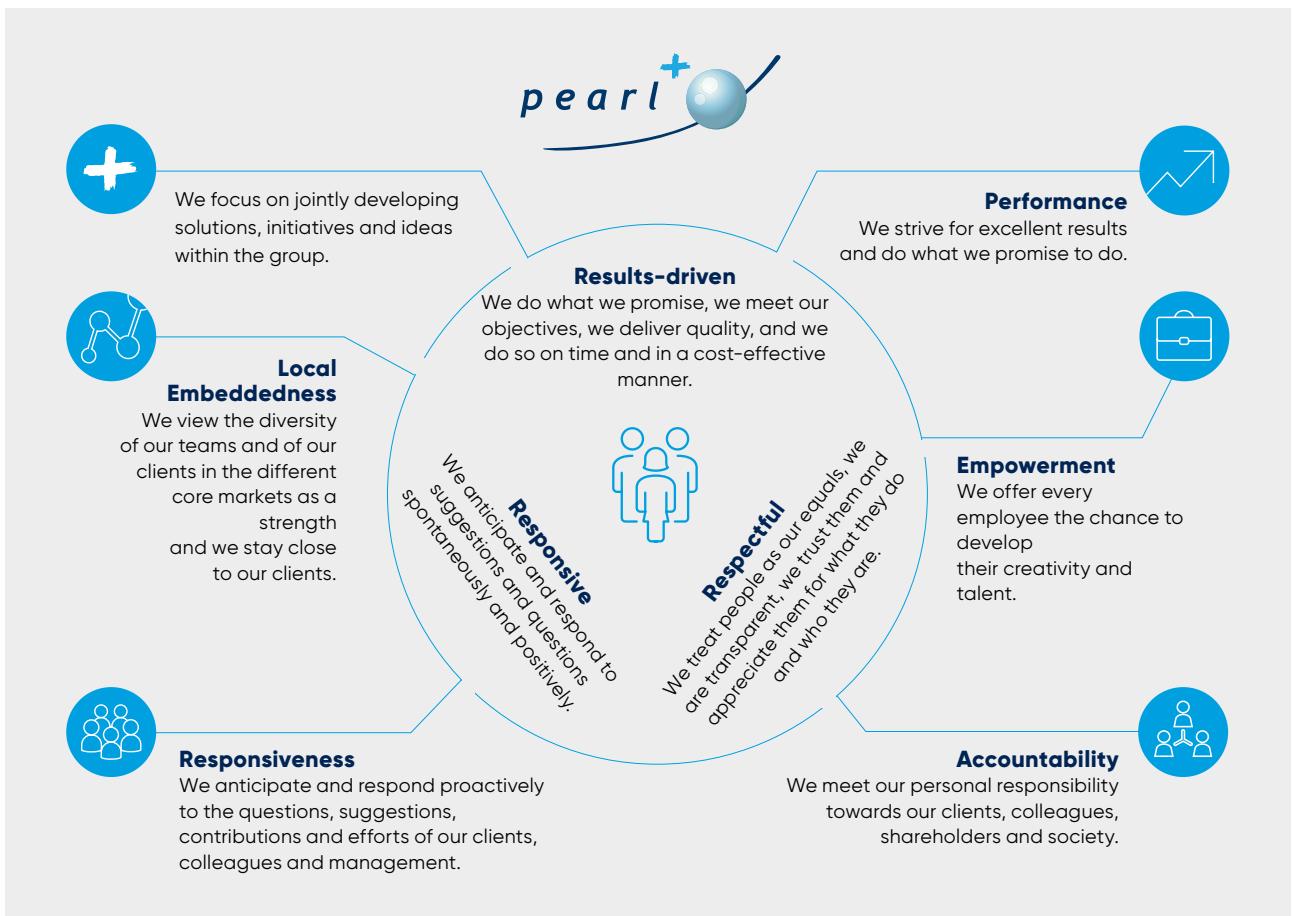

Our capitals

We sum up our business culture in the acronym 'PEARL+', which stands for Performance, Empowerment, Accountability, Responsiveness and Local Embeddedness. The '+' sign in PEARL+ symbolises our focus on the joint development and smart copying of solutions, initiatives and ideas so that they are easy to utilise and deploy throughout the group, enabling us to work more efficiently, respond more quickly to change and make full use of local skills and talents group-wide. We encourage all our employees to behave in a way that is responsive, respectful and results-driven. An explanation of what we mean is given in the diagram.

PEARL+ is a mindset, a working culture, shared by all our staff. We have appointed a dedicated PEARL manager to make sure that all our employees are thoroughly imbued with these values. The PEARL manager reports to our CEO. To embed this culture across the entire group and to ensure its success, we adopt not only a top-down but also a bottom-up approach to its implementation. This includes appointing hundreds of PEARL ambassadors in the workplace, who give concrete shape to PEARL and help other colleagues to apply it.

## What differentiates us from our peers?

1

### Our integrated bank-insurance model

We offer an integrated response to our clients' banking and insurance needs. Our organisation is similarly integrated, with most services operating at group level and the group also managed in an integrated style. Our integrated model offers our clients the benefit of a comprehensive, one-stop, relevant and personalised financial service that allows them to choose from a wider, complementary and optimised range of products and services, which go beyond pure bank-insurance. For ourselves, it offers benefits in terms of income and risk diversification, additional sales potential through intensive cooperation between the bank and insurance distribution channels, significant cost-savings and synergies, and heightened interaction opportunities with and a more complete understanding of our clients.

2

### Our digital approach

Digital interaction with clients forms the basis of our business model in our strategy, not only in terms of sales and advice, but also in process and product development. In addition to a digital product range, therefore, we also offer our clients digital advice and develop all processes and products as if they had to be sold digitally. Artificial intelligence and data analysis will play an important part in digital sales and advice. Kate, our personal digital assistant, will feature prominently in this regard. Our experts naturally remain available at our branches and call centres to answer complex questions or provide advice at key life moments. The very success of our digital strategy allows us to free up more time to improve the advice we provide to clients.

3

### Our strong geographical focus and local responsiveness

We focus on our core markets of Belgium, the Czech Republic, Slovakia, Hungary and Bulgaria. This selection of countries allows us to operate in a mix of mature and growth markets, taking advantage in the latter of the catch-up potential for financial services. We have a limited presence elsewhere in the world, including to support the activities of our corporate clients in our core markets. We want to build sustainable relationships with our local clients in our core countries. The goal is to know and understand our local clients better, pick up signals effectively and respond to them proactively, offer tailored products and services, and focus on the sustainable development of the different communities in which we operate. Where relevant, we facilitate collaboration among our core countries to avoid duplicating our efforts and to offer our clients the best solutions.

## Our strengths and challenges

### Strengths

Unique bank-insurance model and innovative, data-driven digital strategy, which enables us to respond immediately to our clients' needs	Strong commercial banking and insurance franchises in all our business units	Successful track record of underlying business results	Solid capital position and strong liquidity	Firmly embedded in the local economies of our core countries	Strong focus on sustainability, ambitious climate targets that we also use to guide our clients towards a more sustainable future
---	--	--	---	--	---

4

#### Our approach to sustainability

As a financial institution, we have a major direct and indirect impact on society. As a company that aims to support the transition to a more sustainable and climate-proof society, we have made sustainability integral to our overall business strategy and integrated it into our day-to-day business operations and the products and services we provide. Our sustainability strategy, which is geared towards the local economy and society, consists of financial resilience and three cornerstones: encouraging responsible behaviour on the part of all our employees, increasing our positive impact on society and limiting any adverse social impact we might have.

5

#### Our shareholder structure

A special feature of our shareholder structure is the core shareholder syndicate consisting of Cera, KBC Ancora, MRBB and the other core shareholders, which together held roughly 42% of our shares at the end of 2024. These shareholders act in concert, thereby ensuring shareholder stability in our group.

#### Challenges

A macroeconomic environment characterised by geopolitical challenges

Impact of climate change on our and our clients' operations, and the use of opportunities related to the transition to a greener economy

Stricter regulation in areas like client protection, solvency, the environment, data, AI, etc.

Changing client behaviour, competition (e.g. integrated financial solutions from non-financial players)

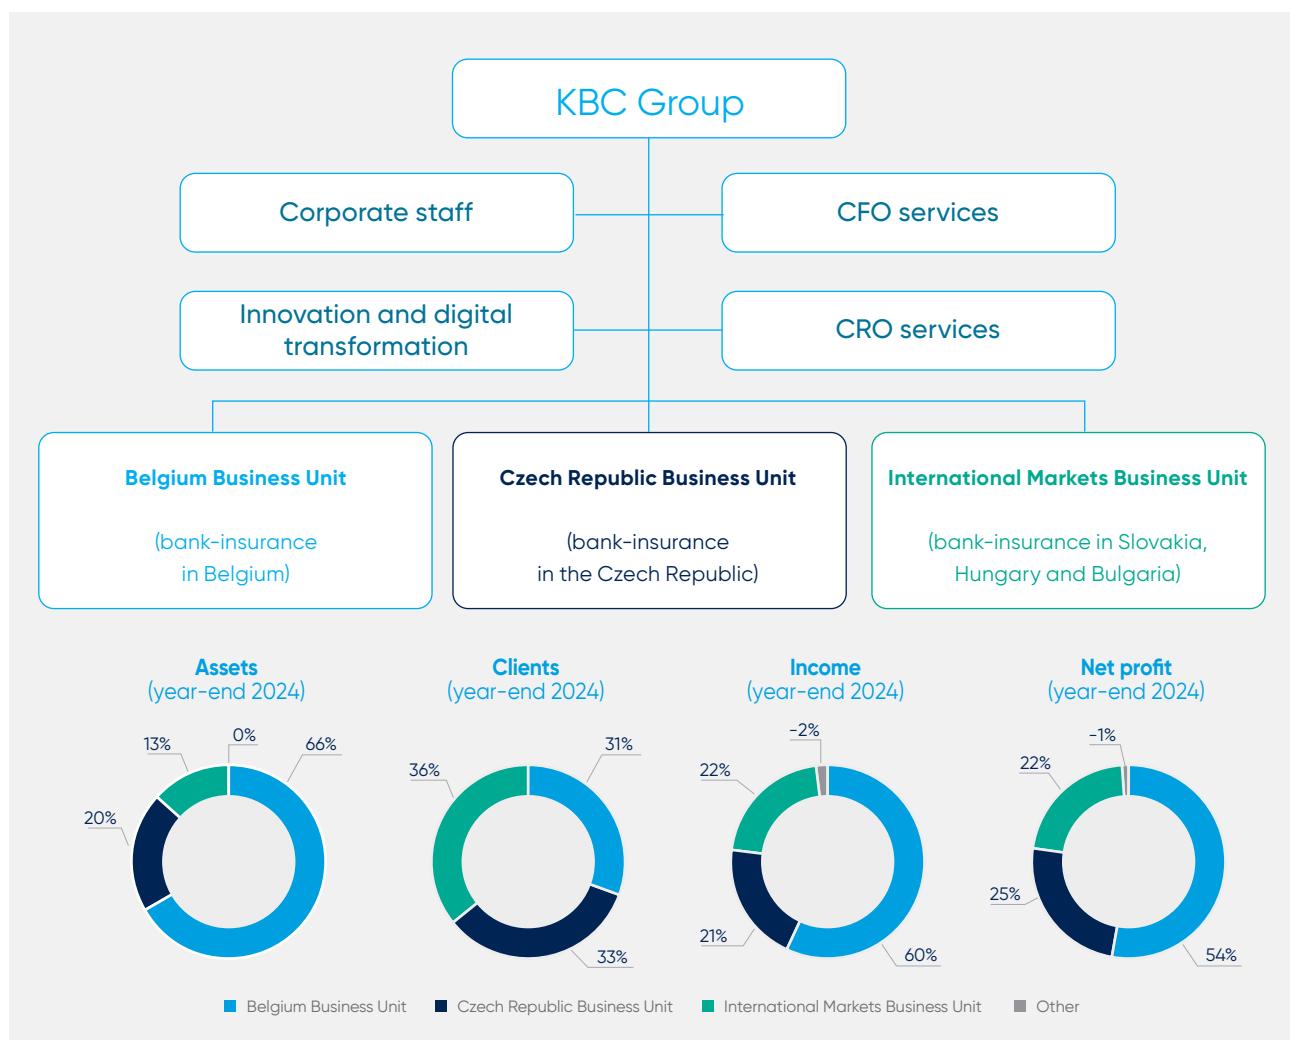

New technologies and cybercrime

We have structured our group around three business units, which focus on local activities and contribute to sustainable earnings and growth. The units are Belgium, the Czech Republic and International Markets. A more detailed description is provided in the 'Our business units' section.

The Board of Directors is responsible for defining our group's strategy, general policy and risk appetite. It is supported by several specialised committees: the Audit Committee, the Risk & Compliance Committee, the Nomination Committee and the Remuneration Committee. These committees are dealt with in the 'Corporate governance statement'. The

most important matters discussed by the Board in 2024 and our remuneration policy for senior management can also be found in that section.

Our Executive Committee provides the operational management of the group within the confines of the general strategy approved by the board. Besides the CEO, the Executive Committee includes the Chief Financial Officer (CFO), the Chief Risk Officer (CRO) and the Chief Innovation Officer (CIO) of the group, as well as the CEOs of the three business units.

'Other' in the charts: a proportion of our employees work in other countries or in group functions; we also allocate part of our capital and earnings to the Group Centre.

## In what environment do we operate?

Our value creation

Our model

Our environment

Our capitals

2024 was a year of distinct growth divergence in the global economy, with real GDP growing by 2.8% in the US, by 0.7% in the euro area and by 5.0% in China. The substantial US growth dynamics were primarily driven by private consumption, underpinned by a robust labour market, and by government spending. In many ways, the growth composition in the euro area was the mirror image of the US economy. Domestic demand remained weak due to the high consumer savings ratio and the lack of incentives included in the fiscal policy. Meanwhile, China still suffered from the structural problem of overcapacity in 2024 and the associated deflationary trends.

The disinflationary trend in the US and the euro area continued in 2024, with US and euro area inflation amounting to 3.0% and 2.4%, respectively, although underlying core inflation (excluding food and energy prices) persisted due to services price inflation. The prospect of large-scale trade disputes in 2025 is weighing on the underlying disinflation path, as US import duties will have an inflationary effect on US price levels. The extent of the inflationary boost to the European economy will depend on the European policy response.

Against the background of declining inflationary pressure in 2024, both the Fed and the ECB started easing their key rates in 2024. The ECB commenced its easing cycle in June by lowering its deposit rate from 4% to 3.75%. More steps – of 25 basis points each – followed in September, October and December, leading to a year-end deposit rate of 3%. In January 2025, the ECB cut its deposit rate by another 25 basis points to 2.75%. The interest rate easing is likely to continue in 2025. In the second half of 2024, the ECB also started its net phase-out of the PEPP portfolio, and the ECB fully discontinued its reinvestments in 2025.

The Fed initiated its easing cycle a few months after the ECB, first lowering its key rate by 50 basis points in September and then further easing interest rates twice, in November and December, each time by 25 basis points. As a result, the key rate stood at 4.375% at year-end 2024. We expect the Fed to also introduce further easing measures in 2025, but they are

likely to tread cautiously due to the inflationary impetus given by the more restrictive US trade policy expected in 2025.

In 2024, the divergence between the US and the euro area in terms of both economic growth dynamics and monetary policy prompted a rising long-term interest rate differential between the US and Germany on balance. The considerable increase in the interest rate differential that started in the run-up to the US elections firmly strengthened the dollar against the euro.

A key risk for 2025 is the escalation of trade disputes and geopolitical tensions. The laborious process of drafting the 2025 budget in a number of euro area Member States is also a major point of concern for 2025, as it carries a risk of higher risk premiums on their public debt.

## What are our main challenges?

### Climate change, global health risks and geopolitical and economic challenges

Our financial performance is obviously impacted by the global economy, as well as by the financial markets and the demographic trends. The coronavirus pandemic and the recent extreme weather conditions demonstrated that climate change and public health risks, too, can have a significant impact. And geopolitical developments, such as the war in Ukraine, can also have major implications for the economy and hence our results.

#### How are we addressing them?

- We ensure in our long-term planning/scenario that our capital and liquidity positions are capable of withstanding a negative scenario.
- We calculate the impact of changes in key parameters and estimate the impact of material events as effectively as possible.
- If it turns out that the models are not capturing the increased credit risk resulting from specific events, we will set aside additional reserves based on management's assessment.
- Where necessary (in response to the coronavirus crisis, for example), we take the measures needed to secure business accessibility and continuity.
- We have translated our environmental and climate change strategy into specific targets and have committed ourselves to several relevant international initiatives. We provide a detailed report on sustainability.
- We constantly adjust our product and service offering by, for instance, responding to demand for sustainable products. We also want to be a partner for our clients in their transformation to a more sustainable future.
- We aim to diversify our income sources to include more fee business, for example, alongside interest income.

### Shifting client behaviour and competition

We face strong competition (from traditional players, online banks, fintechs, bigtechs, and so on), technological changes and shifting client behaviour. All this is influencing clients' expectations in terms of speed, digital interaction, proactivity and personalisation. The development of AI, and generative AI in particular, also fuels expectations and competition in the field of AI-driven assistants.

#### How are we addressing them?

- The creative input and diversity in terms of training and background of our employees is exceptionally important when it comes to equipping ourselves to deal with competition and technological change.
- We can draw on an immense volume of data, which – subject to clients' consent – enables us to understand more clearly what clients want. Our integrated model enables us to gain better insights and to offer our clients more comprehensive solutions than pure banks or insurers can. Meanwhile, we are closer to our clients than bigtech companies are, for instance.
- We have a process in place to ensure that the business side receives approval efficiently for new product and service launches. The process also includes a thorough examination of the potential risks. We regularly review all our existing products, so that they can be adapted to take account of evolving client needs or changing circumstances.
- Research and development have been performed at a variety of group companies as part of a programme to develop new and innovative digital solutions in a more data-driven financial organisation (see 'Our business units').
- In order to monitor our clients' satisfaction and our market position, we apply a structured approach to data collection and analysis. We actively monitor trends and analyse the market. We also consistently send out client surveys to keep track of their satisfaction with our products and services and the level of our service.
- Where possible, applications are copied across the group's different core markets. We are also open to partnerships with fintech firms and sector peers.
- In addition to innovation and digitalisation, we are working hard to simplify and automate products and processes (straight-through processing). Our digital assistant Kate is a great example of one of our solutions aimed at ensuring maximum convenience for our clients.

## Regulation

The following trends and regulations will have a significant impact in the years ahead:

- Sustainability: EU measures to mobilise financial resources for sustainable growth including by means of tailored reporting (CSRD and Article 8 of the Taxonomy Regulation) and by means of obligations regarding due diligence and preparing and implementing a transition plan for climate change mitigation (CS3D);
- Digitality: EU initiatives related to the impact of new technologies on the financial services sector (Digital Operational Resilience Act, Cyber Resilience Act, AMLD (virtual currencies), Markets in Crypto-Assets Regulation, proposals for regulations concerning Financial Data Access, the digital euro and the European Digital Identity);
- Artificial intelligence: the EU intends to regulate the sale, development and application of AI systems at the European level by means of a risk-based approach;
- Prudential supervision: transposition of Basel IV into the Capital Requirements Regulation (CRR3) and Capital Requirements Directive (CRD6); revision of Solvency II; further developments related to the reform of the Crisis Management & Deposit Insurance Framework; further developments related to the draft Directive on recovery and resolution planning for insurance undertakings;
- Payment transactions: a Regulation for instant credit transfers in euro, revision of the legal framework for payment services (PSR) and a proposal for a Directive (PSD3) applicable to payment and electronic money institutions that focuses on prudential aspects;
- Financial markets and products: reform of the European Market Infrastructure Regulation, proposal for a Directive on distance marketing of financial services; EU Green Bonds Standards Regulation; developments related to the EU Listing Act, which amends, for example, the Prospectus Regulation and the Market Abuse Regulation; further expansion of the Capital Markets Union.

### How are we addressing them?

- We are making thorough preparations for the new regulations: details of the new regulations are kept in a database and specialised teams keep close track of the trends and rules, and propose the necessary responses in terms of the group's capital planning, for instance.
- We participate in working groups at sector organisations, where we analyse draft texts.
- A special team focuses on contacts with government and regulators.
- We produce memorandums and provide training courses for the business side.
- We study the impact of regulations on client behaviour and, where appropriate, adjust our products and processes to take account of shifts in that behaviour; we likewise study the impact on transformation and innovation projects.

## Cyber risks and data protection

Following trends in the digital landscape, cyberattacks pose a constant threat in a rapidly digitalising world.

Developments based on artificial intelligence increase the number of potential cyberattacks and introduce new ways of launching cyberattacks. Our focus at KBC is on ensuring both our clients and our entities optimum protection against cybercrime.

### How are we addressing them?

- We raise our employees' awareness of cyber risks by providing training in areas like phishing, smishing ('SMS phishing') and vishing ('voice phishing'), and cyber fraud in general. We use simulation tests to check whether employees respond appropriately to various scenarios.
- We work to achieve highly secure and reliable ICT systems and data protection procedures.
- We are making every effort to collect threat intelligence and apply several tools that allow us to anticipate and respond to different cyber threats such as DDoS attacks and ransomware as quickly and accurately as possible.
- Our group-wide Competence Centre for Information Risk Management & Business Continuity tracks all risks relating to data protection, cybercrime and operational ICT. The team informs and assists local entities, tests KBC's defence mechanisms and provides training.
- We are members of the Belgian Cyber Security Coalition – a knowledge and consultative platform consisting of around 50 public and private-sector enterprises and academics.
- We also have our entities' cyber risks and defence mechanisms evaluated by internal and external security experts.

## Our employees, capital, network and relationships

Our value creation

Our model

Our environment

Our capitals

### Our employees

This is the first year in which we report on our employees in line with the Corporate Sustainability Reporting Directive, or CSRD for short, which contains new EU rules that enhance and update social and environmental reporting by large and listed companies. As required, we disclose the information in a separate 'Sustainability statement' section elsewhere in this annual report.

In order to avoid repeating issues already addressed in the 'Sustainability statement' section, in this section we focus on our values in relation to our employees, how we give them the opportunity to expand their skills and competences – which are essential in implementing our strategy – and how management can contribute to this. Finally, we will also discuss the results of employee surveys and awards. We also refer to our Sustainability Report at [www.kbc.com](http://www.kbc.com) for more details and additional information about our employees.

Our values group-wide are the same and are founded on our PEARL+ business culture. The 'E' in PEARL+ stands for 'Empowerment', referring to our commitment to give every employee the space they need to develop their talent and creativity and to deploy it towards accomplishing our business strategy. The '+' in PEARL+ stands for co-creation across national borders and 'smart copying' between us. In this way, we can benefit even more from the wealth and diversity in our group.

Through the group-wide 'Team Blue' initiatives, we actively promote our PEARL+ culture and unite employees from different countries, to make them proud of their team and their company and enable them to draw on each other's experience. These initiatives include the Team Blue Challenges, the Group Diversity Days and the Group Inspiration Days.

In the autumn of 2024, we launched the latest Team Blue Challenge, called 'Team Blue loves your dreams'. We put our goal of 'making clients' dreams come true and protecting them every day' into practice by rolling up our sleeves for social non-profit organisations that could use some help with their projects, thereby strengthening the bond between employees while giving back to society.

The world is changing at an accelerating pace, as are our client's expectations. KBC aims to be nothing less than the benchmark in this new world. A rapidly evolving environment calls for dynamic and creative employees who are able to respond quickly to their surroundings and the new world of work. By assigning the right person with the right skills to the right job at the right time, we make sure that employees continue to develop and grow in lockstep with KBC. To this end, we are committed to a learning culture, in which learning forms an integral part of our everyday activities and is based on skills. All employees have a personal skills profile that helps them focus on the skills that are needed to improve the performance of their duties and increase their

contribution to KBC's strategy. To achieve all this in a smart way, we use an AI-driven learning and talent platform that goes by the name of StiPPLÉ. It offers learning content that is tailored not only to the relevant skills but also the appropriate skill level. Through progression reviews held with the manager, StiPPLÉ helps them focus on the right performance and development targets. StiPPLÉ simultaneously serves as an integrated marketplace for internal job openings that matches available jobs with qualified internal candidates. Employees can also gain insight into the jobs that best match their profile and the skills they can still develop to achieve their further career ambitions. We are also supported by MyKate, every employee's personal, digital assistant who, based on the right prompts at the right time, supports employees in their KBC journey by recommending learning opportunities and initiating actions that improve their performance and benefit their career. Lastly, we also introduced career counselling for employees to help them gain a better understanding of their personal talents and interests, as well as their career options within KBC.

Good managers are key when it comes to bringing out the best in our employees and implementing the KBC strategy successfully. We therefore invest in the training and education of all our managers, guided by the PEARL+ values as our compass. We provide junior managers with intensive training and offer optional digital and classroom training to experienced managers who wish to learn more about crucial skills and competences. We also provide intensive coaching and training to groups of managers who take on a leading role in specific transformations. In Belgium, we continue to organise 'SAMEN Werkt!' ('Working TOGETHER Works!') sessions to promote teamwork, in which we inspire and motivate formal and informal leaders through company-wide challenges. To enable them to pursue a common vision, senior managers from across the group take part in the 'KBC University', an ambitious development programme. We are also actively working on a separate policy for top talent management, in which we identify future senior managers and fast-track them to face tomorrow's challenges.

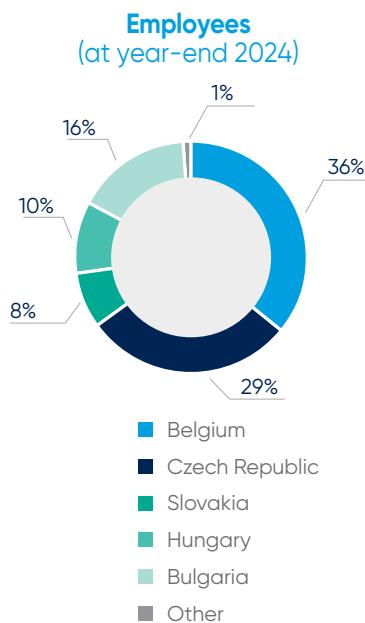

We keep close track of our employees' opinions by means of group-wide employee surveys. We conducted two surveys in 2024, with a global response rate of 84% in the second half of the year. In Belgium, the survey response rate was 81% in March and 82% in October. In the survey conducted in the second half of the year, 74% of our employees group-wide reported feeling engaged with KBC (Belgium 82%, Czech Republic 74%, Slovakia 75%, Hungary 61%, Bulgaria 63%). Employee engagement is defined as pride in working for the company, motivation to be in the current role, and a sense of connection with KBC. In 2024, it was precisely this sense of connection that rose to 82% in Belgium and to 73% at group level, as employees are proud of the stability of KBC as a company and of its innovative approach. Apart from

engagement, the surveys also gauge the support for and impact of the KBC strategy among our employees, as well as other aspects of PEARL+, such as a sense of autonomy and empowerment. The outcome of the survey reveals, for example, that 80% of our employees throughout the group recognise how their job helps to put the KBC strategy into practice.

The surveys have also resulted in a number of measures, including initiatives to support managers in their coaching roles. Managers can access their results and choose to implement specific measures as necessary.

All our efforts translate into externally validated HR awards for the entire group. In early 2025, several group entities were again certified as Top Employers 2025: KBC (for the fifth time in a row) and CBC (for the fourth time in a row) in Belgium, K&H in Hungary (for the third time in a row) and our shared service centres in the Czech Republic and Bulgaria (both for the third time in a row) received this recognition.

More detailed information about the number of persons employed and the composition of the workforce is provided in our 'Sustainability statement' (section 3.1.2).

## Our capital

Our activities are only possible if we have a solid capital base. At year-end 2024, our total equity came to 24.3 billion euros and our capital was represented by 417 544 151 shares.

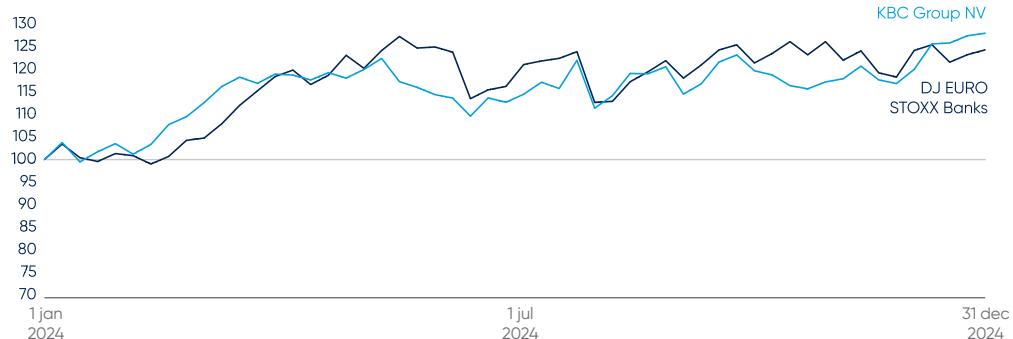

Our shares are held by a large number of shareholders in a number of countries. A group of shareholders consisting of MRBB, Cera, KBC Ancora and the Other core shareholders constitute our core shareholders.

Dividend policy and share buyback programme: see 'We aim to achieve our ambitions within a stringent risk management framework'.

Dividend for 2024: see 'Consolidated statement of changes in equity' in the 'Consolidated financial statements' section.

1 Based on the most recent notifications made under the transparency rules or (if they are more recent) on disclosures made under the Act on public takeover bids or other publicly available information.

2 The voting rights attached to these shares are suspended. For information on the 2023–2024 share buyback programme, see Note 5.10 in the 'Consolidated financial statements' section.

3 Rough breakdown by country/region, based on KBC's own estimates for 30 September 2024.

A major part of our activities involves transforming deposits and other forms of funding into loans. For that reason, funding through deposits and debt securities is an important raw material for our group. We have therefore developed a strong retail/mid-cap deposit base in our core markets. We also regularly issue debt instruments, including via KBC IFIMA, KBC Bank and KBC Group NV itself.

## Our network and our relationships

Alongside staff and capital, our network and relationships are especially important to our activities. An overview of our network can be found under 'Market conditions in our core markets in 2024'.

Our social and relationship capital comprises all relationships with our clients, shareholders, government, regulators and other stakeholders, enabling us to remain socially relevant and to operate as a socially responsible business. This theme is dealt with in depth under 'Our role in society' in the 'Our strategy' section and in our Sustainability Statement.

#### Ratings on 31 December 2024

Financial ratings for KBC group, KBC Bank and KBC Insurance <sup>1</sup>	Long-term debt rating	Outlook	Short-term debt rating
Fitch			
KBC Bank NV	A+	Stable	F1
KBC Group NV	A	Stable	F1

	Score
CDP	A
Sustainalytics ESG Risk Rating	10.9
S&P Global ESG Score	67/100

1 Please refer to the respective credit rating agencies for definitions of the different ratings and the most recent ratings. As far as financial ratings go, KBC Insurance is concerned with the financial strength rating, which indicates the likelihood of policyholders' claims being met, whereas the ratings given for KBC Bank and KBC Group indicate the likelihood of their financial obligations being met.

2 Long-term deposit rating of Aa3.

3 Long-term debt rating raised from Baa1 to A3 in July 2024.

4 Outlook changed from stable to positive in November 2024.

## Key intangible resources

The legislation requires that the annual report contains information about the key intangible resources and how the business model of the company fundamentally depends on such resources and how such resources are a source of value creation for the company.

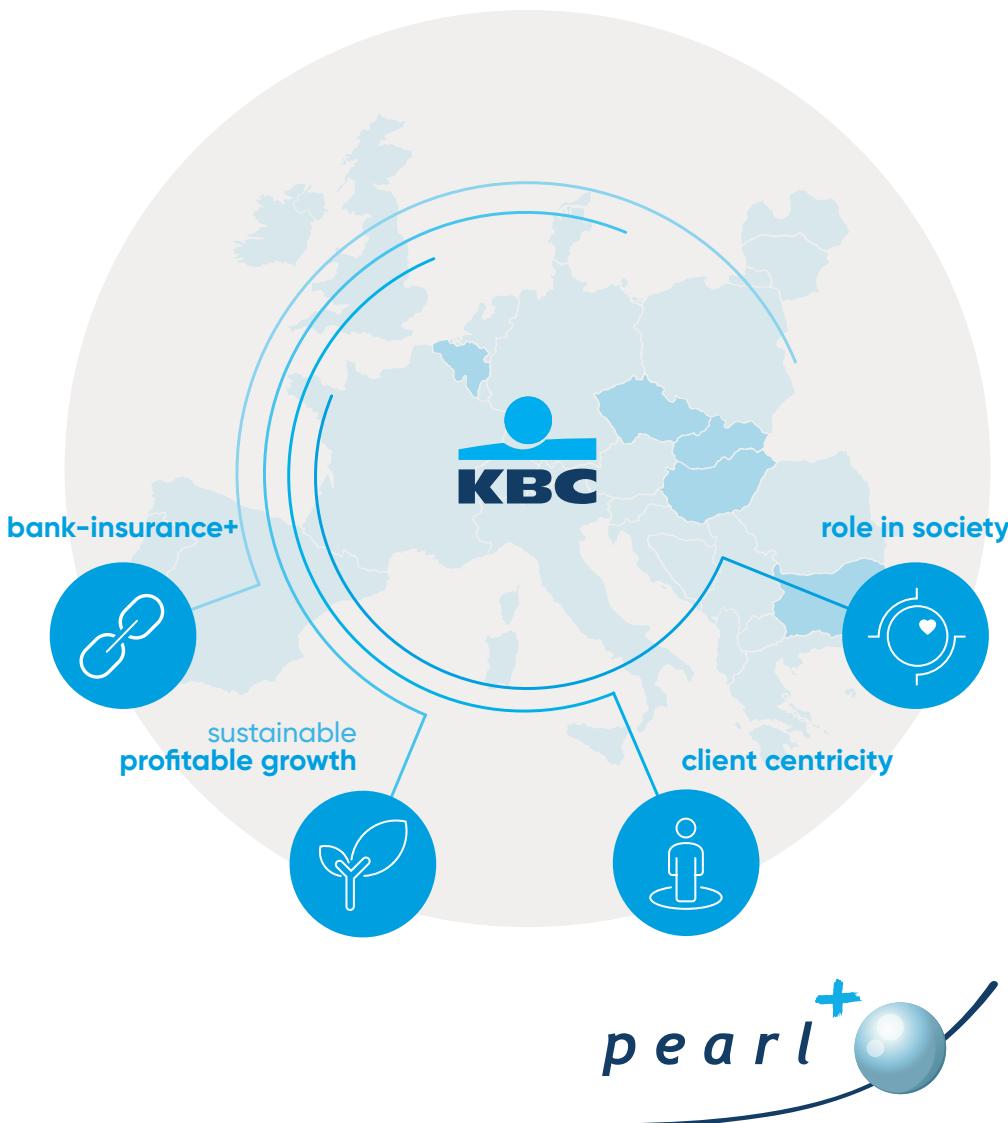

We refer to the 'How do we create value?' diagram in this section for a general overview of our value creation. Key intangible resources in our business model include the values, loyalty, knowledge, motivation and responsible behaviour of our employees, our corporate culture, our capacity to innovate (including in relation to software, AI, etc.) and our relationships with various stakeholders (our clients in particular, but also our suppliers, investors, etc.).

We have incorporated that information into several sections of this annual report. The most relevant sections are:

- 'What makes us who we are?' (PEARL+), 'What are our main challenges?' (changing client behaviour and competition) and 'Our employees, capital, network and relationships' in the 'Our business model' section
- 'The client is at the centre of our business culture' and 'Our role in society' in the 'Our strategy' section
- 'Main features of the internal control and risk management systems' in the 'Corporate governance statement' section
- The 'Sustainability statement' section, especially sections 1.3.2, 1.3.3.2, 3.1, 3.2 and 4.1

# Our strategy

Our strategy rests on the following principles:

- We place our clients at the centre of everything we do.
- We look to offer our clients a unique bank-insurance experience.
- We focus on our group's long-term development and aim to achieve sustainable and profitable growth.
- We assume our role in society and local economies.
- We implement our strategy within a strict risk, capital and liquidity management framework.

As part of our PEARL+ business culture, we focus on jointly developing solutions, initiatives and ideas within the group.

More information on PEARL+ is provided in the 'Our business model' section.

## The client is at the centre of our business culture

client centricity

bank-insurance+

sustainable  
profitable growth

role  
in society

PEARL+: jointly developing solutions, initiatives and ideas within the group.

Within a stringent risk, capital and liquidity management framework

Access to financial services and solid financial advice for all sections of society contributes to economic development and forms the basis for financial and social integration.

As a bank-insurer, we are committed to financial literacy and by means of solid and transparent advice we aim to help our clients make the right decisions.

We take initiatives to promote financial literacy. For example, by introducing the option to receive financial and economic news through KBC Mobile we contribute to awareness-raising and financial education.

We also expect our employees to communicate with our clients in an accessible, clear, understandable and transparent manner.

For a few years now, we have been designing products, services and processes from a 'digital-first' perspective. This implies that they were modified before being digitalised to make them simpler, more user-friendly and scalable and that they allow a fast and appropriate response to our clients' questions and expectations. For clients who so desire, we will use the available data in an intelligent and appropriate manner.

This is why we are transitioning from an omnichannel distribution model towards a digital-first distribution model. The human factor remains important in both models and our staff and branches are at the disposal of our clients. In a

### Main challenges

- Making client experience central and focusing on operational efficiency
- Offering proactive client-friendly solutions, powered by Artificial Intelligence and qualitative data
- Paying special attention to data protection and privacy and to transparent client communication
- Retaining client relationships while integrated financial services are emerging (with non-financial players offering financial products)

digital-first distribution model, digital interaction with clients will form the initial basis. We therefore aim over time to provide all relevant commercial solutions via mobile applications. In addition to a digital product range, we will offer our clients digital advice and develop all processes and products as if they were sold digitally.

Kate – our personal digital assistant – plays an important role in digital sales and advisory, so that personalised and relevant solutions can be offered proactively. Clients can personally ask Kate questions regarding their basic financial transactions. They also receive regular discrete and proactive proposals at appropriate times in their mobile app to ensure maximum convenience. If the client accepts a proposal, the solution will be offered and processed completely digitally.

After KBC Mobile was named the best digital banking app in Belgium for the third time in a row and even entered the global top 3 of independent international consulting firm SIA Partners, KBC Mobile took no less than first place globally in 2024.

Moreover, concluding that Bolero is one of the very best investment apps, SIA Partners awarded it a top position in 2024. As a result, Bolero came out best in the Belgian-Dutch market and took fifth place worldwide.

Employees in the branch network and contact centres continue to function as a beacon of trust for our clients. Our employees also support and encourage the use of digital processes and monitor this use, supported by artificial intelligence, data and data analysis.

To guarantee our clients maximum ease of use and to be able to offer a growing number of possibilities via Kate, we also changed our internal processes, the way we supply our products and services, and how we organise ourselves internally. At the same time, this requires a further change in mentality and in-service training for our staff. For instance, Kate automates certain administrative acts and answers questions, enabling employees to address other issues, saving valuable time which our employees can use to

connect with clients and speak with them about anything that might be on their minds.

A few years ago, we launched our own banktech, Discai, which globally markets our trailblazing artificial intelligence applications that have been developed in-house. The first application focused on the fight against the growing problem of money laundering, which is becoming more and more complex. Discai responds to this market demand by entering into strategic collaborations with specialist partners such as Harmoney. These partnerships enable us to offer powerful end-to-end solutions that combine AI-based warning systems with advanced case and process management platforms, allowing us to help financial institutions effectively and efficiently combat financial crime.

#### Digitality in practice

	2024	2023
Share of banking products sold through digital channels (see the targets for more information)	55%	52%
Share of insurance products sold through digital channels (see the targets for more information)	29%	26%
Growth in mobile app users	+9%	+13%
Number of clients who have already used Kate	5.3 million	4.2 million
The proportion of cases resolved fully autonomously by Kate (E2E) (Belgium/Czech Republic)	69% / 71%	63% / 66%

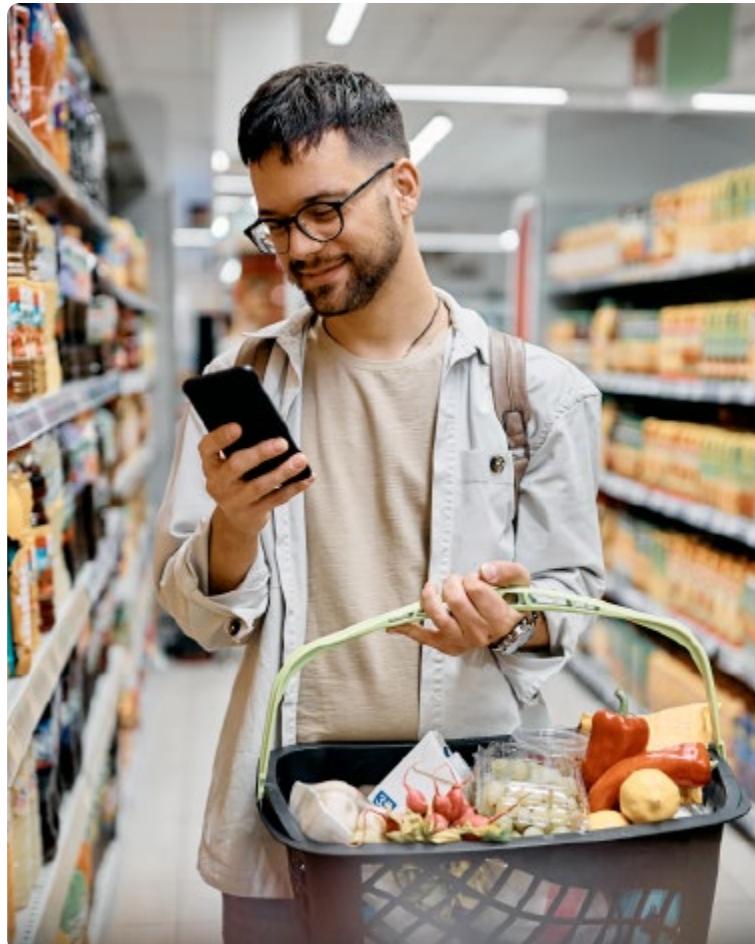

Since the start of 2023, KBC clients have been able to acquire Kate Coins when purchasing certain products or services from us, such as a home loan, home insurance or saving spare change, and when purchasing products from specific commercial partners. They can then use those Kate Coins to save money by exchanging them for additional benefits. For instance, KBC clients can exchange Kate Coins when purchasing an investment plan, a prepaid card, personal accident insurance or family insurance, and enjoy a cashback. KBC clients can also spend their Kate Coins at a number of commercial partners. The partners themselves determine the conditions and timing of their offer. In KBC Mobile, clients can check out partners where they can earn money, and in their Kate Coin Wallet they can see how many Kate Coins they have earned and spent with KBC and the various partners.

Last year, we took the next step by introducing 'S.T.E.M., the Ecosphere', with S.T.E.M. standing for Save Time and Earn Money. By combining a number of concepts and building blocks previously launched, such as Digital First, Kate and Kate Coins, and incorporating them in ecosystems, we are able to offer our clients a new type of service, supporting them – through our distribution channels – every step of the way in their search for solutions to housing, mobility, healthcare and other issues, using our own products and services as well as those of our partners and suppliers. This enables our clients to save and earn money in and beyond the traditional banking and insurance environment.

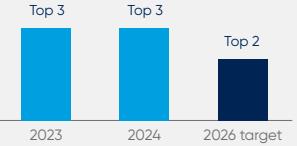

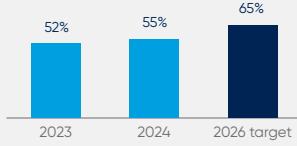

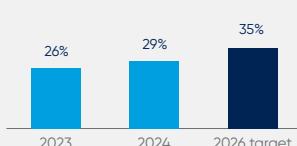

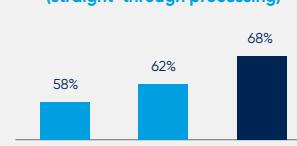

Digitalisation also comes with the obligation to use the available data in a responsible manner. We therefore make sure we process data in accordance with the GDPR and all privacy rules, and that processes are in place to ensure this for each new service we launch. In doing so, we take into account the key data protection principles of purpose limitation (i.e. not using data for any purpose other than that for which it was collected), data minimisation (i.e. not collecting more data than is required for the intended purpose) and transparency (i.e. being transparent regarding the data collected and used). The latter is related to our privacy policy, which is published by each entity of our group through the appropriate channels in order to ensure that all individuals whose personal data is processed are properly informed. We make every effort to secure and protect data against unwanted or unauthorised access, loss or damage, to not retain any personal data once it is no longer required for the purpose for which it was collected, and to keep all personal data accurate and up to date.

We have documented all the rights of the data subjects and protect this from any infringements on fundamental human rights resulting from our access to data. Because privacy and data protection are not only objective concepts, defined by law, they are highly subjective ones too. We therefore want to let our clients decide how we use their data and how Kate can use this data. In the process, we aim to communicate in a transparent way and offer our clients a clear privacy overview, in which they can adjust their choices at any moment.

Since putting the interests of our clients at the heart of everything we do is the cornerstone of our strategy, we keep a close eye on their situation. We continuously survey our clients and organise regular debates with client panels. A specific dialogue is likewise maintained with NGOs, and a stakeholder debate also organised on a regular basis. We closely monitor our reputation and communicate this analysis to all the departments and individuals concerned, so they can take appropriate action.

The main targets and results for client satisfaction and digital sales are set out below.

KPI	Description	Target and result	
 <b>Client NPS score</b>	A ranking is drawn up based on Net Promoter Scores for each core country. The rankings are aggregated at group level based on the number of retail clients.	Target: top 2 ranking in 2026 2024 result: top 3	<b>NPS ranking for client satisfaction</b> 
 <b>Digital sales</b>	Digital sales as a percentage of total sales, based on weighted average of a selection of core products.	Target: $\geq 65\%$ for banking and $\geq 35\%$ for insurance in 2026 2024 result: 55% for banking 29% for insurance	<b>Digital sales – banking</b>  <b>Digital sales – insurance</b> 
 <b>Straight-through processing (STP)</b>	The STP ratio measures how many services that can be offered digitally are processed without human intervention from the moment of the interaction with the client to final agreement by KBC. The STP score is based on analysis of all retail processes.	Target: STP ratio $\geq 68\%$ in 2026 2024 result: 62%	<b>STP-score (straight-through processing)</b> 

## We offer our clients a unique bank-insurance experience

client centricity

bank-insurance+

sustainable  
profitable growth

role  
in society

PEARL+: jointly developing solutions, initiatives and ideas within the group.

Within a stringent risk, capital and liquidity management framework

As a bank-insurer, we put our clients at the heart of what we do by offering them an integrated range of products and services.

Our integrated model offers the client the benefit of a comprehensive, relevant and personalised one-stop service that allows them to choose from a wider, complementary and optimised range of products and services.

It offers the group benefits in terms of income and risk diversification, additional sales potential through intensive cooperation between the bank and insurance distribution channels, significant cost-savings, synergies and heightened interaction opportunities with and a more complete understanding of our clients.

As stated earlier, we do everything we can to integrate our channels (bank branches and insurance agencies, contact centres, self-service terminals, the website, our home banking application and mobile apps). Because we are both a bank and an insurer, we can commit ourselves completely to this integrated approach and seamless service.

We have developed a unique bank-insurance cooperation concept within our group, a model that goes much further than a bank that sells insurance products. It is all about complete back-office and support-service integration, which delivers operational and commercial optimisation for both the client and for KBC itself. The way we work means, for instance, that we only need one communications department, one marketing department, one risk control department, and so on. It is only the underlying product factories that operate independently, as these are specific professions.

In addition to operating as a single business, we pursue a digital-first, lead-driven and AI-led organisation. This means fully integrated front and back-end applications designed according to the 'digital first' principle. We are firmly committed to becoming data and AI-led in all our core

### Main challenges

- Ensuring seamless collaboration between data, communication and sales channels
- Operating as a single business and pursuing a digital-first, lead-driven and AI-led approach as a bank-insurer
- Bank-insurance+: expanding the offering to include financial and non-financial one-stop-shop solutions
- Driving up commercial synergies and the number of bank-insurance clients

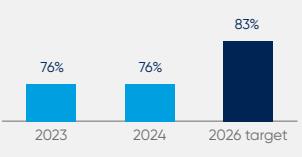

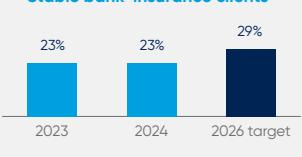

countries, at their own pace. Kate (see previous section) is the key element within a data-led organisation of this kind. Our experts naturally remain available at our branches and call centres to answer complex questions or provide advice at key life moments.

We offer not only our own bank and insurance products and services through our mobile apps, but also non-financial products and services. For 'bank-insurance+', these solutions are designed to help our clients save money (e.g., suggesting that they switch to a cheaper energy supplier), earn money (e.g., discounts using Kate Coins in Belgium), making everyday payments easier (e.g., paying automatically for parking) or supporting business activities. We work with third parties to provide these solutions. S.T.E.M., the Ecosphere takes this to the next level. We will not only offer non-financial products and services, but we will integrate them into the full client journey to ensure that we can offer our clients a new and more comprehensive one-stop-shop value proposition.

Our bank-insurance model is already enabling us to achieve various commercial synergies. In Belgium, for instance, just over eight out of ten clients who agreed home loans with KBC Bank in 2024 also took out mortgage protection cover with KBC Insurance, while more than nine out of ten purchased home insurance. At ČSOB in the Czech Republic, five to six out of ten clients who took out home loans in 2024 also purchased home insurance from the group. To give another example, across the group at year-end 2024, about 76% of active clients held at least one of the group's banking products and one of its insurance products, while roughly 23% even held at least two banking and two insurance products (3-3 in Belgium). The number of bank-insurance clients of this type grew by 3% (1-1) and 1% (2-2 and 3-3 in Belgium) in 2024 respectively.

We use a number of Key Performance Indicators (KPIs) to track the success of our bank-insurance performance, the most important of which are listed in the following table.

KPI	Description	Target and result								
 <b>Share of bank-insurance clients</b>	Share of bank-insurance clients (with at least 1 bank and 1 insurance product from the group) within total number of active bank clients*	<p>Target: ≥ 83% bank-insurance clients in 2026</p> <p>2024 result: 76%</p>  <table border="1"> <thead> <tr> <th>Year</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>2023</td> <td>76%</td> </tr> <tr> <td>2024</td> <td>76%</td> </tr> <tr> <td>2026 target</td> <td>83%</td> </tr> </tbody> </table>	Year	Value	2023	76%	2024	76%	2026 target	83%

2023	23%									
2024	23%									
2026 target	29%									

\* An active bank client is defined as one holding at least a current account into which income is regularly paid (salary, pension, money transfers, etc.).

## We focus on sustainable and profitable growth

client centricity

bank-insurance+

sustainable  
profitable growth

role  
in society

PEARL+: jointly developing solutions, initiatives and ideas within the group.

Within a stringent risk, capital and liquidity management framework

Developing long-term relationships with our clients is crucial if we are to secure our long-term future. We do not pursue high short-term returns that come with excessive risks but rather focus on sustainable and profitable growth in the long run.

Sustainable and long-term thinking also means concentrating on the local economies of our core markets of Belgium, the Czech Republic, Slovakia, Hungary and Bulgaria. We view our presence in these countries as a long-term commitment and want to consolidate our presence there by means of organic growth or attractive acquisitions, in line with clear and strict criteria.

Arising merger and acquisition opportunities beyond our core markets may be assessed (for approval of the Board of Directors) obviously taking into account very strict strategic, financial, operational and risk criteria.

### Main challenges

- Developing long-term relationships with our clients
- Further optimising presence in core countries and integrating businesses acquired
- Diversifying income base
- Establishing relevant partnerships and collaborations, including with a view to expanding ecosystems

Recent examples of acquisitions: more details are provided in the 'Our business units' section and in Note 6.6 of the 'Consolidated financial statements'.

<b>2024 growth, by business unit</b>	<b>Loans and advances to customers*</b>	<b>Deposits from customers*</b>	<b>Sales of life insurance</b>	<b>Sales of non-life insurance</b>
Belgium	+4%	+10%	+30%	+7%
Czech Republic	+7%	+2%	+9%	+12%
International Markets	+9%	+5%	+1%	+15%
Total	+5%	+7%	+25%	+10%

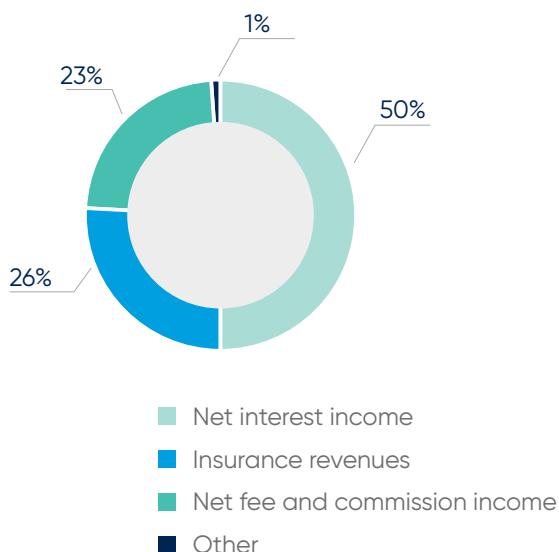

\* Excluding foreign-exchange effects. For deposits, excluding deposits at KBC Bank's foreign branches, which are driven by short-term cash management opportunities.

We want to be in a position to deliver all our products and services in a top class manner. In the case of our core activities, we will retain production in-house. But for peripheral activities, we will mostly look to outsourcing or partnerships with (or in some cases acquisition of) specialists, including start-ups.

In Belgium, for instance, we collaborate with a start-up that makes renovation estimates of buildings for our clients and that refers clients to the allowances and grants available to them. This is plainly not a core business of ours, but – besides advancing the level of client satisfaction and ensuring maximum convenience for our clients – it does help us to gain an understanding of our clients in order to improve our core business.

If we have access to the details of these transactions – and subject to clients' consent – we can generate added value for our clients by proposing better solutions based on analysis, thereby saving them money or making their lives easier.

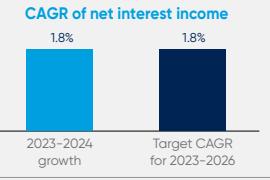

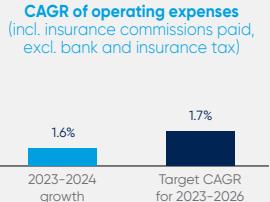

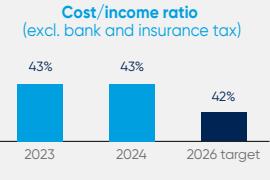

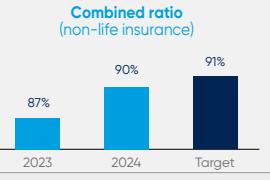

### Breakdown of total income (2024)

As a diversified income base fosters sustainable and profitable growth, we want to generate more revenue from the fee business (commissions) and insurance activities, alongside our interest income.

Stringent risk management in everything we do is an absolute precondition in terms of guaranteeing sustainability. For more information on this, see 'We aim to achieve our ambitions within a stringent risk management framework'.

We monitor our long-term performance and our focus on the real economy and sustainability via a number of Key Performance Indicators (KPIs). The most important KPIs that applied in 2024 are listed in the following table. The last row includes the updated KPIs applicable as from 2025.

KPI	Description	Target and result								
 <b>CAGR of net interest income</b>	Compound annual growth rate (CAGR) of net interest income	Target: CAGR for 2023-2026 $\geq 1.8\%$ 2023-2024 result: +1.8%   <table border="1"> <caption>CAGR of net interest income</caption> <thead> <tr> <th>Period</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>2023-2024 growth</td> <td>1.8%</td> </tr> <tr> <td>Target CAGR for 2023-2026</td> <td>1.8%</td> </tr> </tbody> </table>	Period	Value	2023-2024 growth	1.8%	Target CAGR for 2023-2026	1.8%

## Our role in society

client centricity

bank-insurance+

sustainable  
profitable growth

role  
in society

**PEARL+:** jointly developing solutions, initiatives and ideas within the group.

Within a stringent risk, capital and liquidity management framework

This is the first year in which we provide detailed sustainability information in line with the Corporate Sustainability Reporting Directive, or CSRD for short. We disclose the information in a separate 'Sustainability statement' section in this annual report.

In this section, we avoid repeating issues that are addressed in the 'Sustainability statement' section. That is why this section mainly focuses on our sustainability strategy.

Our sustainability strategy has been created to help us fulfil our role in society and to create value for all our stakeholders.

The essence of the strategy is found in financial resilience and a strict risk management system that allows us to do business in a sustainable way. Our sustainability strategy is also underpinned by three important pillars: maximising the positive impact of our products and services on society and the environment, minimising or preventing potential negative impacts, and promoting responsible behaviour among all our employees.

We also publish a separate Sustainability Report (available at [www.kbc.com](http://www.kbc.com)). To avoid repetition, you will find references to sustainability topics that are addressed in the 'Sustainability statement' section and in our Sustainability Report below.

### Main challenges

- Integrating sustainability in key processes and business activities
- Setting targets to reduce the impact of our activities and implementing actions to reach those targets
- Managing the risks that climate change poses to us and the companies we finance or insure or in which we invest
- Taking into account other environmental considerations when determining our strategy (biodiversity, circularity)
- Complying with new and amended sustainability legislation and collecting necessary and sufficiently detailed climate-related data on our portfolios
- Focus on responsible behaviour at all levels of our business

*In 2024, KBC was again included in the list of Climate Leaders compiled by the Financial Times. Just ten Belgian companies hold the title of Climate Leader 2024, and KBC is the only Belgian financial institution featured in the list.*

## Sustainability information

'Sustainability statement' section in this annual report, main topics

- Our sustainability governance
- Our sustainability strategy, including SDGs and business model
- Our double materiality assessment
- EU Taxonomy information
- Where relevant, the strategy, impact, risk and opportunity management, metrics, and our targets related to:
  - Climate change, water and marine resources, and biodiversity and ecosystems
  - Own workforce, and consumers and end-users
  - Business conduct

Sustainability Report ([www.kbc.com](http://www.kbc.com)), main topics

- 2024 in a nutshell
- Our sustainability strategy
- Our employees
- Our responsibility (business ethics, information security and cyber risk, privacy and data protection, etc.)
- Sustainable business operations
- Facts and figures
- Methodological background (Principles for Responsible Banking and Principles for Sustainable Insurance)
- Principles for Responsible Banking
- Principles for Sustainable Insurance

Since 2019, we have also mapped our material topics with the Sustainability Accounting Standards Board (SASB) standards. We aim to publish a separate SASB disclosure at [www.kbc.com](http://www.kbc.com) for 2024.

## Aiming to encourage responsible behaviour on the part of all our employees

Our stakeholders' trust depends entirely on responsible behaviour on the part of every employee. We therefore expect all our employees to behave responsibly, which means this theme comes high on our agenda every year. The basis of responsible behaviour is integrity, which requires honesty, fairness, transparency and confidentiality, as well as a healthy awareness of risk. Integrity and ethical values are also reflected in our 'Code of Conduct for KBC Group Employees'.

Given the difficulty of defining responsible behaviour, rather than drawing up guidelines for such behaviour we set out the underlying principles. These are presented in the 'Compass for Responsible Behaviour' section.

Responsible behaviour is especially relevant for a bank-insurer when it comes to appropriate advice and sales. We pay particular attention, therefore, to training (including testing) and awareness. We developed an online training course to clarify the importance of responsible behaviour and provide a framework to help our employees take difficult decisions when faced with dilemmas. The online training course has also been incorporated into the onboarding programme for new staff. In 2023, a new initiative in the form of a mandatory webinar was launched to raise awareness of

responsible behaviour, which had been completed by nearly all our employees at the end of June 2024. An internal website, accessible to all employees, also went live in late 2024. On this website, employees can read which responsible behaviour is expected of them and why, and conveniently search all material available on this topic.

We communicate transparently on our rules and policy guidelines, which can be found at [www.kbc.com](http://www.kbc.com) and in our 'Sustainability statement' elsewhere in this report.

## Aiming to enhance our positive impact on society

We want to enhance our positive impact on society to which end we are focusing on four areas in which we, as a bank-insurer, can create added value: financial literacy, entrepreneurship, environmental awareness and longevity and/or health.

Specific examples of initiatives in every area are provided in the 'Our business units' section.

### Environmental awareness

We reduce our own and indirect ecological footprint through a diverse range of initiatives and objectives. We develop products and services that can make a positive contribution to the environment.

### Financial literacy

We help clients make the right choices through sound and transparent advice, and clear communication.

We improve general public knowledge of financial concepts and products.

For instance, we aim to promote financial literacy among young people to enhance their knowledge of more complex financial products such as home loans.

### Entrepreneurship

We contribute to economic growth by supporting innovative ideas and projects.

### Longevity and health

We focus on longevity in Belgium and the Czech Republic, adapting our range of products and services to the fact that people live longer. We focus on health in Bulgaria, Slovakia and Hungary, developing products, services and projects geared towards improving health, healthcare and quality of life.

## Limiting any negative impact we might have on society

We apply strict sustainability rules to our business activities in respect of human rights, the environment, business ethics and sensitive or controversial social themes. In the light of constantly changing societal expectations and concerns, we review our sustainability policies at least every two years.

A complete list and details of our sustainability policies can be found in our Sustainability Report and our Sustainability Framework at [www.kbc.com](http://www.kbc.com).

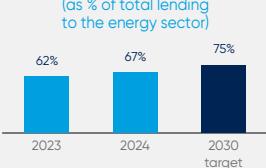

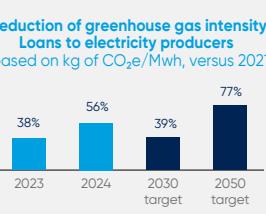

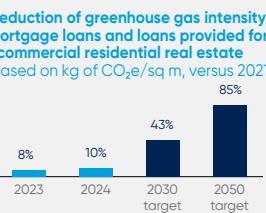

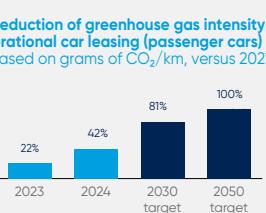

The 'Sustainability statement' section provides more in-depth information about several sustainability policies, including on the following topics:

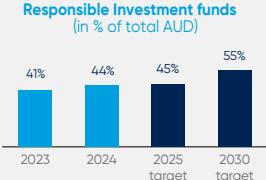

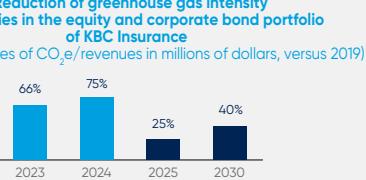

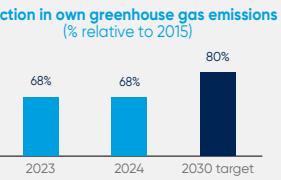

- Environment
- Energy
- Investments
- Biodiversity
- Mining
- Code of conduct for employees
- Whistleblowers
- Remuneration

- Diversity and inclusion
- Human rights
- Integrity
- Ethics and fraud
- Tax
- Anti-corruption and anti-bribery
- Anti-money laundering
- Dealing Code
- Suppliers
- Data protection

## Selection of objectives related to sustainability/climate and the environment

Below, we provide a purely illustrative selection of sustainability and environmental objectives. A complete list, including the methodological background, can be found in the 'Sustainability statement' section (including information on reviews by the assurance providers) and in our Sustainability Report.

KPI	Description	Target and result										
<b>Credit portfolio (target selection)</b>												
	<b>Renewable energy loans</b> [Amount of loans to businesses in the renewable energy sectors] / [total energy-sector loan portfolio]	Target: 75% in 2030 2024 result: 67%  <b>Renewable energy loans (as % of total lending to the energy sector)</b>  <table border="1"> <thead> <tr> <th>Year</th> <th>Value (%)</th> </tr> </thead> <tbody> <tr> <td>2023</td> <td>62%</td> </tr> <tr> <td>2024</td> <td>67%</td> </tr> <tr> <td>2030 target</td> <td>75%</td> </tr> </tbody> </table>	Year	Value (%)	2023	62%	2024	67%	2030 target	75%

## We aim to achieve our ambitions within a stringent risk management framework

client centricity

bank-insurance+

sustainable  
profitable growth

role  
in society

PEARL+: jointly developing solutions, initiatives and ideas within the group.

Within a stringent risk, capital and liquidity management framework

Risk management is an integral part of our strategy and our decision-making process.

- We perform risk scans to identify all key risks.
- We define our risk appetite in a clear manner.
- We translate that into strict limit tracking per activity and business unit.
- We monitor the risk profile of existing and new products via a product approval process.
- We challenge the results of the periodic planning process via stress tests.
- We have installed independent chief risk officers in all relevant parts of our organisation.

Although the activities of a large financial group are exposed to risks that only become apparent in retrospect, we can currently identify a number of major challenges for our group. These are set out under 'In what environment do we operate?' in the 'Our business model' section.

As a bank-insurer, we are also exposed to the typical risks for the sector, which are listed in the following table. A description of each type of risk can be found in the 'How do we manage our risks?' section.

Sector-specific risks	How are we addressing them?
<b>Credit risk</b>	<ul style="list-style-type: none"> <li>Existence of a robust management framework</li> <li>Recording impairment charges, taking risk-mitigating measures, optimising the overall credit risk profile, reporting, stress testing, etc.</li> <li>Limit systems to manage concentration risk in the loan portfolio, etc.</li> </ul>
<b>Market risk in non-trading activities</b>	<ul style="list-style-type: none"> <li>Existence of a robust management framework</li> <li>Basis Point Value (BPV), sensitivity of net interest income, sensitivity per risk type, stress tests, limit tracking for crucial indicators, etc.</li> </ul>
<b>Market risk in trading activities</b>	<ul style="list-style-type: none"> <li>Existence of a robust management framework</li> <li>Historical VaR method, BPV and basis risk limits, 'greeks' and scenario limits for products with options, stress tests, etc.</li> </ul>
<b>Liquidity risk</b>	<ul style="list-style-type: none"> <li>Existence of a robust management framework</li> <li>Drawing up and testing emergency plans for managing a liquidity crisis</li> <li>Liquidity stress tests, management of funding structure, etc.</li> </ul>
<b>Technical insurance risks</b>	<ul style="list-style-type: none"> <li>Existence of a robust management framework</li> <li>Underwriting, pricing, claims reserving, reinsurance and claims handling policies, etc.</li> </ul>
<b>Non-financial risk (operational risk, compliance risk, reputational risk, business risk, strategic risk)</b>	<ul style="list-style-type: none"> <li>Existence of a robust management framework</li> <li>Group key controls, risk scans, Key Risk Indicators (KRIs), etc.</li> <li>Risk scans and monitoring of risk signals</li> <li>Strict acceptance policy, stress tests, monitoring, etc.</li> </ul>
<b>Climate-related and other ESG risks</b>	<ul style="list-style-type: none"> <li>These risks have been integrated into the existing risk management frameworks (see above).</li> </ul>

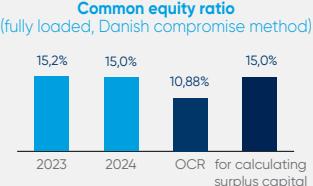

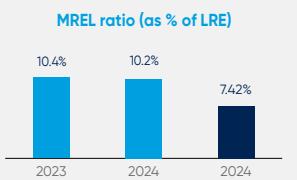

In addition to the comprehensive monitoring of risk indicators (see the 'How do we manage our risks?' section), we monitor our solvency and liquidity performance using a number of ratios, the most important of which are listed in the following table.

## Dividend policy and capital allocation policy

- Dividend policy for 2024: a payout ratio (i.e. dividend + AT1 coupon) of at least 50% of consolidated profit for the financial year, and an interim dividend of 1 euro per share in November of every financial year as an advance on the total dividend.

- Capital allocation policy up to and including 2024: in addition to the payout ratio of at least 50% of the consolidated profit, the Board of Directors will decide (when announcing the annual results) at its own discretion on the payment of the capital exceeding a 15.0% fully loaded common equity ratio (known as surplus capital).
- The dividend policy and the capital allocation policy will be updated upon publication of the first quarter 2025 results.
- For information on the 2023–2024 share buyback programme, see Note 5.10 in the 'Consolidated financial statements' section.

# Our financial report (consolidated)

Bartel Puelinckx, the group's new Chief Financial Officer since September 2024, summarises the results as follows:

*"With a consolidated net profit of 3.4 billion euros, we have posted a solid result for 2024, which is mainly attributable to growth in our net interest income, strong insurance revenues, very high net fee and commission income and a positive one-off item related to the exit from Ireland. Our lending showed good growth and our customer deposits also grew substantially, partly as a result of the targeted campaigns we launched following the release of the money invested in the one-year Belgian State Note. The sale of both non-life and life insurance improved significantly and our assets under management reached a record high. The cost increase was limited and our credit cost ratio remained well below the predetermined through-the-cycle maximum. Finally, our*

*solvency and liquidity remained particularly solid, as reflected in our common equity ratio, NSFR ratio and LCR ratio, all of which remained significantly above the legal minimum levels."*

Liquidity coverage ratio (LCR)	158%	159%
Net stable funding ratio (NSFR)	139%	136%

- Where relevant for the information on results, we state the growth figure as well as a growth figure adjusted for foreign-exchange effects (depreciation of the Czech koruna and the Hungarian forint; see 'Main exchange rates used' in Note 1.2 of the 'Consolidated financial statements'

section). Figures on assets and liabilities (loans, deposits, etc.) and sales (non-life insurance and life insurance) have been systematically adjusted for foreign-exchange effects.

## Our financial result

### Net interest income 1

Our net interest income amounted to 5 574 million euros in 2024, up 2% on the year-earlier figure (3% excluding the foreign-exchange effect). This was mainly attributable to a combination of a higher commercial transformation and ALM result, a more or less stable result from lending activities (with the positive impact of volume growth being offset by the negative impact of margin pressure in a few core markets) and the negative impact of a number of items, such as higher costs related to the minimum required reserves held with central banks, lower interest income from the dealing room, higher wholesale funding costs, lower interest income

from short-term cash management activities, slightly lower interest income from time deposits, lower net interest income as a result of the sale of the remaining portfolios in Ireland and lower interest income from inflation-linked bonds. Our loans and advances to customers amounted to 192 billion euros and rose by 5%, increasing by 4% at the Belgium Business Unit, 7% at the Czech Republic Business Unit and 9% at the International Markets Business Unit (with growth in each of the three countries). Our total deposit volume (deposits from customers, excluding debt securities) stood at 229 billion euros and rose by 7% (excluding deposits in KBC Bank branches abroad, which are driven by short-term cash

management opportunities). Deposit growth amounted to 2% at the Czech Republic Business Unit, 5% at the International Markets Business Unit and 10% at the Belgium Business Unit. The growth at the Belgium Business Unit was partly due to successful initiatives following the release of money on the maturity date of the one-year Belgian State Note in early September 2024. Thanks to our proactive, multi-phased and multi-product offer to clients, the total inflow of client money (deposits, savings certificates, funds, insurance, bonds, etc.) after the maturity date of the state note amounted to roughly 6.5 billion euros, exceeding the 5.7-billion-euro outflow to the state note a year earlier by 0.8 billion euros.

The net interest margin for our banking activities came to 2.09% compared to 2.05% in 2023. It amounted to 1.94% at the Belgium Business Unit, 2.42% at the Czech Republic Business Unit and 3.25% at the International Markets Business Unit.

## Net fee and commission income 2

Our net fee and commission income came to 2 578 million euros in 2024, a growth of 10% on the year-earlier figure (11% excluding the foreign-exchange effect). This was mainly the result of higher fees for our asset management services (management fees in particular, mostly related to the increase in assets under management; see below) and, to a lesser extent, higher fees for our banking services. The latter was primarily due to higher payment transaction fees, network income and securities-related fees.

At the end of 2024, our total assets under management came to approximately 276 billion euros, 13% more than a year earlier, due to higher asset prices (+10 percentage points), combined with net inflow (+9 percentage points). Most of these assets at year-end 2024 were managed at the Belgium Business Unit (245 billion euros) and the Czech Republic Business Unit (19 billion euros).

## Insurance service result 3

The insurance service result (insurance revenues before reinsurance – insurance service expenses before reinsurance + net result from reinsurance contracts held; the latter two items are not part of total income) amounted to 453 million euros, of which 290 million euros for non-life insurance and 163 million euros for life insurance.

The non-life insurance result dropped by 10% (9% excluding the foreign-exchange effect), mainly due to a combination of substantially higher insurance service expenses that were impacted by storms and floods (including storm Boris in Central Europe), which were only partly offset by higher insurance revenues and an improved reinsurance result (partly related to the above-mentioned storms and floods). The life insurance result was up 12% (9% excluding the foreign-exchange effect), with higher insurance revenues more than offsetting the increased insurance service expenses.

Sales of non-life insurance stood at 2 547 million euros and rose by 10%, with growth in all countries and main classes of insurance due to a combination of volume and rate increases. The combined ratio for non-life insurance came to 90% (88% excluding storm Boris), compared to 87% in 2023. Sales of life insurance products amounted to 2 906 million euros, a 25% increase compared to 2023 as a result of higher sales of both unit-linked and non-unit-linked products, partly thanks to the inflow from the matured state note and a successful launch of structured emissions in Belgium. The share of non-unit-linked and unit-linked products in our total sales of life insurance in 2024 stood at 42% and 51%, respectively, with the rest consisting of hybrid products, mainly in the Czech Republic.

## Other income 4

Other income came to an aggregate 69 million euros, as opposed to 723 million euros a year earlier. In 2024, this included:

- -168 million euros in 'trading and fair value income and insurance finance income and expense', down on the year-earlier figure by 177 million euros, largely due to the negative change in the market value of derivatives used for asset/liability management purposes;
- dividend income of 57 million euros, in line with the amount of 59 million euros a year earlier;
- net other income of 181 million euros, a 475-million-euro decrease on the year-earlier level, which mainly benefited from the positive impact of the finalisation of the sale of the Irish portfolios in February 2023 (+408 million euros; see Note 6.6 in the 'Consolidated financial statements' section for more information). A positive impact from that sale was also seen in 2024, which is recognised under 'Income tax expense' (see below).

## Operating expenses 5

Our operating expenses, excluding the expenses that are directly attributable to insurance contracts, amounted to 4 565 million euros. Including expenses directly attributable to insurance contracts, but excluding bank and insurance tax, they stood at 4 474 million euros in 2024, 1% higher than in 2023 (2% excluding the foreign-exchange effect), which was mainly attributable to higher staff expenses (mostly indexation and wage drift, despite the positive impact of lower FTE staff numbers) and higher ICT costs, partly offset by lower expenses related to Ireland and lower facility expenses.

Bank and insurance tax amounted to 623 million euros, a 9% drop that was primarily due to the lower contribution to the resolution fund but that was partly offset by higher national levies in various countries.

The cost/income ratio excluding bank and insurance tax came to 43% in 2024, the same figure as in 2023. The cost/income ratio including bank and insurance tax but excluding the exceptional and/or non-operational items (see the

'Glossary of financial ratios and terms' at the end of this report for more information) amounted to 47%, compared to 49% in 2023.

## Impairment 6

Our total impairment (on both loans and other assets) came to 248 million euros in 2024.

There was a net increase of loan loss impairment totalling 199 million euros, compared to a net reversal of 16 million euros a year earlier. The 2024 figure includes an increase in impairment on the loan portfolio of 333 million euros, partly offset by a reversal of part of the reserve for geopolitical and macroeconomic uncertainties (134 million euros; see Note 3.9 in the 'Consolidated financial statements' section). As a result, at year-end 2024 an amount of 117 million euros was left in the reserve for geopolitical and macroeconomic uncertainties. For the group as a whole, the credit cost ratio amounted to 0.10% for 2024 (0.16% excluding the change in the reserve for geopolitical and macroeconomic uncertainties), as opposed to 0.00% for 2023 (0.07% excluding the changes in the reserve for geopolitical and macroeconomic uncertainties).

The proportion of (stage 3) impaired loans (see the 'Glossary of financial ratios and terms' for a definition) in our loan portfolio was 2.0% at year-end 2024, compared to 2.1% in 2023. The proportion of impaired loans more than 90 days past due came to 1.0%, the same figure as in 2023.

Other impairment charges came to 49 million euros in 2024, compared to a year-earlier figure of 231 million euros. In 2024, these mainly involved software and the extension of the interest rate cap in Hungary. In 2023, this included impairment in connection with goodwill on a ČSOB subsidiary in the Czech Republic, the extension of the interest rate cap in Hungary, software, and property and equipment in Ireland as a result of the sale transaction.

## Other items 7

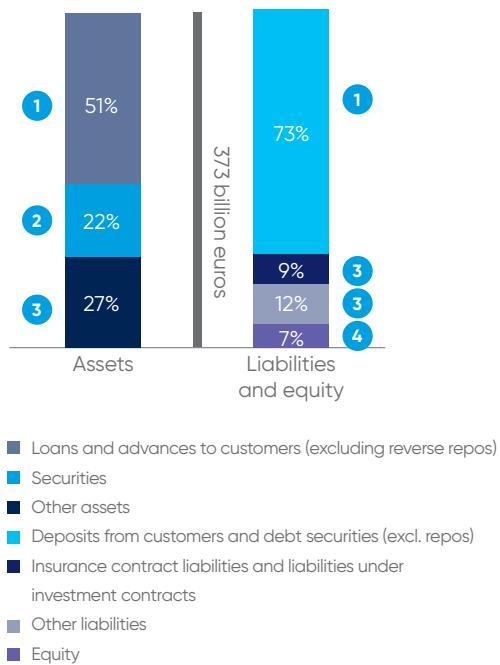

In 2024, the 'Share in results of associated companies and joint ventures' (80 million euros) benefited from a one-off gain of 79 million euros (see Note 3.10 in the 'Consolidated financial statements' section).

Our income tax expense came to 527 million euros in 2024, compared to a year-earlier figure of 778 million euros. The 2024 figure includes a positive one-off impact of 318 million euros as a result of the imminent liquidation of Exicon (the remaining activities of KBC Bank Ireland).

## Our balance sheet

### Balance sheet components (year-end 2024)

## Securities 2

We also hold a portfolio of securities at the bank and at the insurer (where it serves primarily as an investment in the life insurance context), which totalled 80 billion euros at year-end 2024, roughly 9% up on the year-earlier figure. The securities portfolio comprised 3% shares and 97% bonds. At year-end 2024, 82% of these bonds consisted of government paper, the most important being Czech, Belgian, French, Slovak and Hungarian. A list of these bonds is provided in the 'How do we manage our risks?' section.

## Other assets and other liabilities 3

Other important items on the assets side of the balance sheet were loans and advances to credit institutions and investment firms (2.4 billion euros, down 11% on the year-earlier figure), reverse repos (21.1 billion euros, down 16% on the year-earlier figure), derivatives (positive mark-to-market valuation of 4.9 billion euros, down 1% on the year-earlier figure), investment-linked life insurance contracts (16.6 billion euros, up 16% year-on-year due mainly), and cash, cash balances with central banks and other demand deposits with credit institutions (46.8 billion euros, up 36% on the year-earlier figure, partly owing to the increase in repos on the liabilities side of the balance sheet).

## Loans and deposits 1

Our core banking business is to attract deposits and use them to provide loans. This explains the importance of the figure for loans and advances to customers on the assets side of our balance sheet (192 billion euros at year-end 2024). Loans and advances to customers grew by 5%, with 4% growth at the Belgium Business Unit, 7% at the Czech Republic Business Unit, and 9% at the International Markets Business Unit (with growth in all countries). The main lending products at group level were again term loans (91 billion euros; +6%) and mortgage loans (78 billion euros; +4%).

On the liabilities side, our customer deposits grew by 7% to 229 billion euros (growth rate excluding the deposits at KBC Bank's foreign branches). This figure included a 10% increase at the Belgium Business Unit (supported by the successful initiatives following the release of money on the maturity date of the one-year Belgian State Note in early September 2024), 2% growth at the Czech Republic Business Unit and 5% growth at the International Markets Business Unit. The main deposit products at group level were again demand deposits (110 billion euros, +3%), savings accounts (74 billion euros, +6%) and time deposits (43 billion euros, +14%). Debt securities issued accounted for 42 billion euros, 1% less than the previous year. More information on this matter can be found in Note 4.1 of the 'Consolidated financial statements' section.

Other significant items on the liabilities side of the balance sheet were insurance contract liabilities and liabilities under the insurer's investment contracts (an aggregate 32.8 billion euros, up 9% year-on-year), repos (21.1 billion euros, 15.9 billion euros more than the year-earlier figure, mainly due to higher demand in the market along with more attractive margins), derivatives (negative mark-to-market valuation of 5.0 billion euros, down 15% on the year-earlier level due to foreign exchange contracts) and deposits from credit institutions and investment firms (12.9 billion euros, down 14% year-on-year, partly due to the repayment of the remaining TLTRO III balance).

## Equity 4

On 31 December 2024, our total equity came to 24.3 billion euros. This figure included 22.4 billion euros in parent shareholders' equity and 1.9 billion euros in additional tier-1 instruments. Total equity rose by 0.1 billion euros compared to the end of 2023. The increase was due to the combined effect of the recognition of the profit for the financial year (+3.4 billion euros), the repurchase of treasury shares (-0.8 billion euros in 2024), the payment of the final dividend for 2023 and an extraordinary interim dividend (both in May 2024), as well as an interim dividend for 2024 that was paid in November 2024 (an aggregate -1.9 billion euros), slightly lower revaluation reserves (-0.2 billion euros), a net decrease in additional tier-1 instruments outstanding (-0.4 billion euros) and a number of smaller items. For more details, see

'Consolidated statement of changes in equity' in the 'Consolidated financial statements' section.

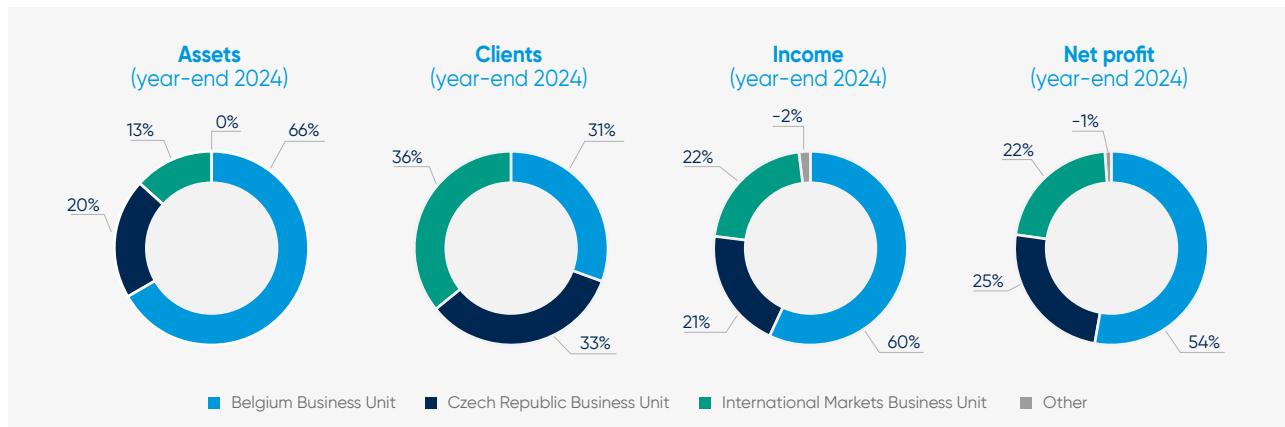

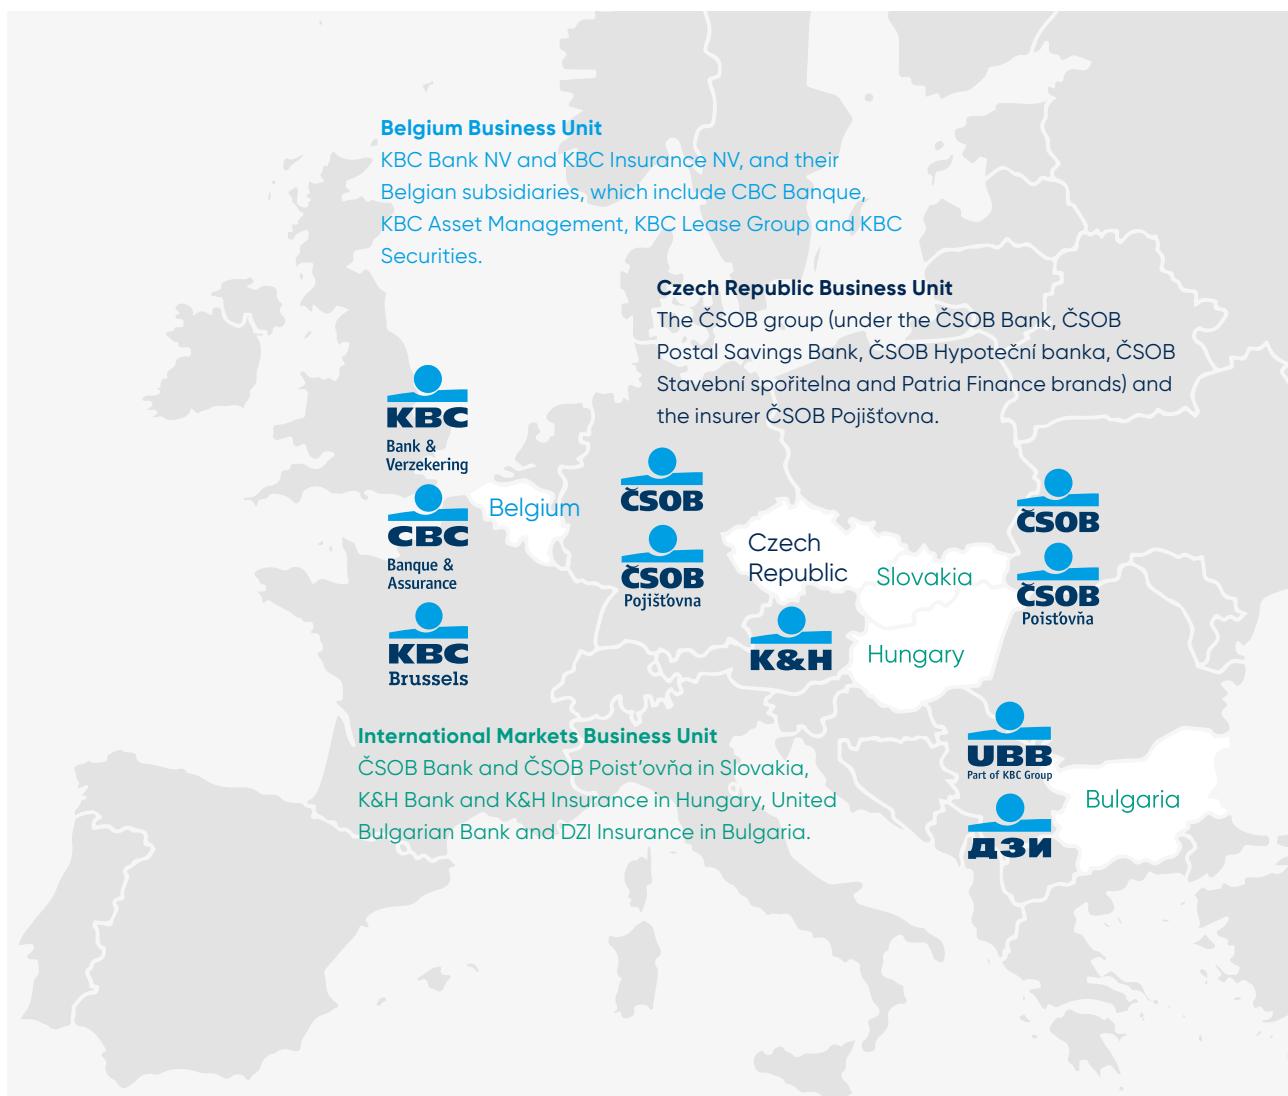

On 31 December 2024, our common equity ratio (Basel III, under the Danish compromise method) stood at 15.0% (fully loaded), compared to 15.2% in 2023. Detailed calculations of

our solvency indicators are given in the 'How do we manage our capital?' section. The group's liquidity position remained excellent, as reflected in an LCR ratio of 158% and an NSFR ratio of 139%, well above the minimum requirement of 100%.

## Additional information

- The overall impact on the net result of fluctuations in the exchange rates of the main non-euro currencies was – on balance – limited to -56 million euros (due to the depreciation of the Czech koruna and the Hungarian forint against the euro).
- Information on financial instruments, hedge accounting and the use thereof is provided in the 'Consolidated financial statements' section (Notes 1.2, 3.3, and 4.1–4.8 among others) and in the 'How do we manage our risks?' section.
- For information on the treasury share buyback programme, see Note 5.10 in the 'Consolidated financial statements' section.
- For information on significant post-balance-sheet events, see Note 6.8 of the 'Consolidated financial statements'.
- For a review of the result for each business unit, see 'Our business units'.
- Guidance for 2025: see the quarterly report for the fourth quarter of 2024 (at [www.kbc.com](http://www.kbc.com)).

# Our business units

## Belgium

### Macroeconomic context

Belgian economic growth slowed to 1.0% in 2024. Real GDP growth was underpinned by domestic demand, while net exports and, in particular, changes in stocks weighed on growth. As was the case in many other European countries, 2024 was another tough year for the industry. Activity in the industry contracted by 1% in real terms on average, whereas in services and construction activity was up 1.3% and 1.0%, respectively. The persistently poor performance of households' housing investments kept the residential construction subsector in a deadlock in 2024. In the housing market the more moderate price dynamics continued, with house prices still recording an average increase of 3.1% for the full year.

Net job creation came to a halt in the course of the year. The unemployment rate remained fairly stable between 5.5% and 6.0%. The job vacancy rate declined, but still indicated tight labour supply. The withdrawal of energy support measures drove Belgian inflation – measured according to the Harmonised Index of Consumer Prices – upwards to 4.3% on average. Core inflation (excluding energy and non-processed food), however, fell back to 3.8% on average. Public finances deteriorated further on account of higher, largely ageing-related, spending. The ten-year rate of Belgian linear bonds (OLO's) rose to 3.2% in June 2024, fell back to 2.6% in early December and ended the year at 3.0%. The yield spread with the corresponding German Bund had fallen back to around 50 basis points in the spring of 2024,

but climbed back up to around 60 basis points in the second half of the year.

Figures for forecast GDP growth in 2025 and 2026 can be found under 'Market conditions in our core markets'.

- 'Best Banking Group in Belgium' (International Banker)
- 'Best Private Bank in Belgium' (Euromoney)
- 'Best Digital Bank' (Spaargids.be)
- 'Top Employer' (KBC and CBC) (Top Employers Institute)
- 'Best Digital Bank in Belgium' (Euromoney).
- 'Best Private Banker of Belgium' (Professional Wealth Management and The Banker).
- KBC Asset Management: 'Most Innovative Asset Management Company Belgium 2024' (World Economic Magazine) and 'Sustainable Asset Management Company of the Year 2024 – Belgium' (Wealth & Finance International)

## Specific objectives

- We put the client at the heart of all the products and services we develop and at the centre of everything we do. Our focus here is on a 'digital first' approach with a human touch, and investing in the seamless integration of our various distribution channels. We are working on the further digitalisation of our banking, insurance and asset management services and exploiting new technologies and data to provide our clients with more personalised and proactive solutions when appropriate.
- Our digital assistant 'Kate' features prominently in this regard. Kate allows us to help our clients save time and earn money, in which Kate Coins play a vital role.
- To support these activities, we are also fully engaged in introducing end-to-end straight-through processing into all our commercial processes, making full use of all technological capabilities such as (generative) artificial intelligence. This is how we increase our efficiency, which allows us to invest in a strong network (bank branches, insurance agencies, KBC Live) boasting more expertise.
- We work tirelessly on the ongoing optimisation of our bank-insurance model in Belgium.
- We aim for further growth of bank-insurance at CBC in specific market segments and expansion of our accessibility in Wallonia, again with a strong focus on 'Digital first with a human touch'.
- We collaborate with partners through 'ecosystems' that enable us to offer our clients comprehensive solutions – on every step of their journey. We are also integrating a range of partners into our own mobile app and making our products and services available in the distribution channels of third parties.
- We express our commitment to Belgian society by leading the way in the sustainability revolution. We are making our banking, insurance and asset management products more sustainable to create financial leverage in achieving global climate targets. We aim to be more than a provider of pure bank-insurance services – as a partner in the climate transition, we are working with other partners on developing housing and mobility solutions. We also continue to focus on financial literacy, entrepreneurship and population ageing.

## 2024 developments

client centricity

In line with our strategy, we continue to invest in our digital systems, with the emphasis on solutions aimed at making our clients' lives easier. One of our main focus points is the further development of Kate, our digital assistant. Kate has been consulted by over

2.1 million clients since her launch. What's more, the number of cases resolved fully autonomously by Kate also continues to grow: this stood at roughly 69% at year-end 2024, compared to 63% at year-end 2023. More information about Kate can be found in 'The client is at the centre of our business culture'.

We offer both financial and non-financial applications online. One of our latest developments in banking is a feature that allows KBC clients to pay for purchases in a single scan with their meal vouchers and bank account linked to Payconiq in KBC Mobile. This improves the payment experience for consumers and retailers alike. The new feature is gradually being rolled out to more retailers. KBC has already integrated the Wero application in KBC Mobile. Similar to Payconiq in Belgium, this will gradually enable person-to-person transfers within Europe without needing to know the account number (a mobile phone number or an e-mail address will suffice). KBC Mobile now also allows you to search past transactions up to 10 years back, add a widget of your favourite services to your login screen, set your device to discrete mode, and find information about the sustainability of your investments.

We also keep expanding our range of non-financial applications, focusing on areas including mobility (public transport tickets, parking apps, ride-sharing, etc.), housing and energy (finding and selling homes with Immoscoop, requesting certificates and inspections through 'De Immowinkel', working out the cost of a home renovation with Setle, etc.), leisure (receiving financial and economic news), and so on. There were close to 2 million mobile users at year-end 2024 – a further 7% increase year-on-year. And we are obviously incredibly proud that independent international consulting firm Sia Partners named KBC Mobile the best banking app in the world in 2024.

Our experts naturally remain available at our bank branches and insurance agencies, as well as at KBC Live, to answer complex questions or provide advice at key life moments. We are able to offer this service thanks to the success of our digital strategy, which allows us to free up more time to improve the advice we provide to our clients. That is why we are committed to improving the availability of our experts and are also continuously exploring ways to further optimise our accessibility. Take the 'KBC Belmobiel' – which involves the provision of services at home in Flanders – for example: mobility-challenged and less digitally adept retail customers who have difficulty visiting a branch and banking on a desktop or mobile device can receive a home visit from an experienced KBC staff member. The visit can only take place

when requested and is by appointment only. This service enables KBC to ensure extensive local presence, including in areas without any KBC Bank branches.

Overall, the Belgium Business Unit's loan portfolio rose by 4%. Our deposits (excluding the more volatile deposits in our network of KBC Bank branches abroad) were up 10%, due in part to the successful recovery of core customer money after the Belgian state note issued last year had reached maturity. The total inflow of core customer money (deposits, savings certificates, funds, insurance, bonds, etc.) after the Belgian state note's maturity date amounted to approximately 6.5 billion euros, exceeding last year's 5.7-billion-euro outflow to the state note by 0.8 billion euros. Assets under management (funds, asset management, etc.) rose by 13% in 2024 due to both net inflow and the increase in asset prices in 2024. Sales of non-life insurance went up 7% in 2024, with growth in virtually all insurance classes, and sales of life insurance even rose by 30%, owing to both non-unit-linked and unit-linked products.

Our bank-insurance model is delivering numerous commercial synergies. In 2024, for instance, more than nine out of ten clients who agreed home loans with KBC Bank also purchased home insurance with KBC Insurance, and just over eight out of ten clients took out mortgage protection cover. There was a further increase of 2% in the number of clients who hold at least one KBC banking product and one KBC insurance product (i.e. bank-insurance clients) in 2024, while the number of clients with at least three banking and three insurance products from KBC (i.e. stable bank-insurance clients) even went up by 4%. At year-end 2024, bank-insurance clients accounted for 77% of the business unit's active clients (clients with a current account into which their income is regularly paid); stable bank-insurance clients made up 30% of active clients.

We took a variety of initiatives to stimulate entrepreneurship in recent years. One of our most important initiatives, Start it @KBC, turned 10 in September 2024. Over the past ten years, Start it @KBC has supported over 1600 start-ups. In Start it @KBC's early years, the mission and operations of some 40% of our start-ups were focused on sustainability; this has since doubled to around 80%. The number of women founders also saw a strong increase during that period, rising from 22% to 39%. As regards environmental awareness, we remain committed to reducing our own footprint, but we also aim to actively assist our clients in their transition. We encourage them through incentives, for instance in the form of adjusted mortgage rates based on their home's EPC rating, either in the home's current state or after renovations and within a

certain time frame. We also provide our clients with information and support regarding sustainable construction and renovation. For example, we collaborate with partners who can provide our clients with bespoke energy advice, and we advise our clients on grant schemes.

In 2024, we successfully issued a new green bond for an amount of 750 million euros, marking the first issue under our updated Green Bond Framework. The proceeds are used towards energy-efficient buildings, renewable energy transactions and environmentally friendly transport. Over 100 different investors participated in this issue, which enables KBC to continue to actively support the financing of environmentally sustainable economic activities.

We also remain committed to enhancing financial skills and knowledge among young people as well as educating them on poor financial choices and how to avoid getting into financial difficulty. Our Get-a-Teacher teaching pack offers free lessons to secondary schools, colleges and universities and helps young people navigate the world of finance. We are also placing particular focus on improving young adults' skills and knowledge regarding home loans.

In 2024, we also committed ourselves to supporting The Warmest Week, whose theme was 'Loneliness'. We all crave connection and the warmth and comfort of connecting with others. A lack of connection can soon take a toll on our well-being, leading to feelings of loneliness and isolation. Bringing people together is a simple cure for loneliness. That is why we are fully committed to The Warmest Week – standing together against loneliness.

## 2024 result

**Net result**  
**1 846** million euros  
 (-1%)

**Net interest income**  
**3 305** million euros (+2%)  
**Insurance service result**  
**293** million euros (+1%)  
**Net fee and commission income**  
**1 684** million euros (+10%)  
**Operating expenses (incl. bank and insurance tax)**  
**2 799** million euros (-1%)  
**Impairment on loans**  
**246** million euros increase  
 (82-million-euro increase)

**Cost/income ratio (excl. bank and insurance tax)**  
**41%** (41%)  
**Combined ratio**  
**88%** (85%)  
**Credit cost ratio**  
**0.19%** (0.06%)  
**Impaired loans ratio**  
**2.0%** (2.0%)

Figures for 2024 (the figures in brackets are for, or indicate the difference compared to, 2023). Insurance service result = insurance revenues before reinsurance - insurance service expenses before reinsurance + net result from reinsurance contracts held. A detailed breakdown of the income statement for each business unit and each country can be found in 'Note 2.2: Results by segment' in the 'Consolidated financial statements' section.

- 2% growth in net interest income. The business unit's loans and advances to customers increased by 4% and customer deposits (excluding the more volatile deposits in our network of KBC Bank branches abroad) went up by 10%. The net interest margin for 2024 came to 1.94%, roughly stable year-on-year.
- 1% higher insurance service result, with the increase in insurance revenues being largely offset by the higher insurance service expenses.
- 10% growth in net fee and commission income, due mainly to higher management fees for asset management services.
- 181-million-euro drop in all other income items combined, primarily due to lower trading and fair value income.
- 1% decrease in costs, with the negative impact of, among other things, slightly higher staff expenses being offset by a decrease in bank and insurance tax.
- 165-million-euro higher impairment on loans, due mainly to higher impairment on individual loans, offset to a small extent by a slightly higher reversal of the reserve for geopolitical and macroeconomic uncertainties (see Note 3.9 in the 'Consolidated financial statements' section).
- 79-million-euro one-off gain relating to a participation, recognised under 'Share in results of associated companies and joint ventures'.

# Czech Republic

## Macroeconomic context

In 2024, the Czech economy started to recover from the negative effects of the energy crisis and increased by 1.0%. This recovery was driven by private consumption and public spending, while weak foreign demand hampered growth. The average annual inflation based on the Harmonised Index of Consumer Prices (according to the Eurostat definition) fell from 12.1% in 2023 to 2.7% in 2024, due to lower inflation from food, energy and non-energy goods, whereas services price inflation remained at a high level.

While the unemployment rate remained virtually unchanged in 2024 (2.6% in December 2024), the labour market cooled somewhat. Industry surveys indicate fewer labour shortage problems and the number of vacancies has continued to fall. Despite the negative impact of the floods in the autumn, the budget deficit hovered around the limit of 3% (2.8%) of GDP in 2024. The Czech National Bank responded to the significant decline in inflation by lowering its key rate further, from 6.75% to 4.0%, in 2024. Another rate cut followed in February 2025, bringing it down to 3.75%. The relatively swift easing cycle and higher global economic risks put downward pressure on the Czech koruna. As a result, the koruna weakened against the euro for the second consecutive year and ended 2024 above 25 korunas per euro.

Figures for forecast GDP growth in 2025 and 2026 can be found under 'Market conditions in our core markets'.

## Specific objectives

- To retain our reference position in banking and insurance services by offering our retail, SME and mid-cap clients a hassle-free, no-frills client experience, both through our digital channels and in person.
- To further increase the active client base and further strengthen our market position, especially in insurance, investment services and home loans.
- To cultivate and nurture strong relationships with our clients by offering them 'beyond banking' products and services.
- To continue the further digitalisation and to introduce new and innovative products and services, including open bank-insurance solutions aimed at boosting the financial well-being of our clients.
- To use data and AI to proactively offer personalised solutions, including via Kate, our personalised digital assistant.
- To concentrate on rolling out straight-through processing and further simplifying our products, our head office, and our distribution model, in order to enable us to operate even more cost-effectively.

- To further strengthen our corporate culture, with a strong focus on results, our clients, our ability to adapt and on cooperation.
- To become the reference in advisory services in terms of climate change and sustainable lending and investments. To also express our social engagement by focusing on themes including financial literacy, entrepreneurship, cybersecurity and population ageing.

- 'Best Bank in the Czech Republic' (Global Finance)
- 'Best Private Bank in the Czech Republic' (Euromoney)
- 'Best Bank in the Czech Republic' (Euromoney)
- 'Best Bank for ESG in the Czech Republic' (Euromoney)
- 'Best Digital Bank in the Czech Republic' (Euromoney)
- 'Bank of the Year in the Czech Republic' (The Banker)
- 'Best Private Bank in the Czech Republic' (The Banker)
- 1st place in the category 'Bank without Barriers' (Mastercard)
- ČSOB Pojišťovna: 1st place in the 'Mobile Application of the Year' category (Mastercard)

## 2024 developments

client centricity

In the Czech Republic, too, the focus was on investing in the further expansion of our digital systems, with the aim of developing solutions intended to make our clients' lives easier and helping them save time and earn money. In the past few years we also gradually added even more services to our smartphone apps, focusing in particular on Kate, our personalised digital assistant. Kate has been consulted by over 1.5 million clients since her launch. What's more, the number of cases resolved fully autonomously by Kate also continues to grow: this stood at roughly 71% at year-end 2024, compared to 66% at year-end 2023. And in mid-2024, we also launched Kate Coins in the Czech Republic. More information about Kate can be found in 'The client is at the centre of our business culture'.

A great deal of attention is also devoted to the expansion and further improvement of our other mobile banking applications. For example, clients can now also use the Smart Banking app to take out a new insurance policy providing extended warranty and purchase protection, get an overview of their shopping cards, read articles and news items, connect to their Patria wallet, and so on. There were nearly 1.5 million mobile users at year-end 2024 – 12% more than in 2023.

In 2024, ČSOB also introduced the electronic signature for signing mortgage contracts at all branches. The electronic signature ensures a better client experience, promotes sustainability by reducing paper usage, and significantly cuts down processing time. This innovation was awarded Computerworld magazine's 'IT Product of the year 2024'. ČSOB also rewards clients who choose it as their primary bank for their financial needs, for example by providing them with benefits in the form of a bonus rate on savings accounts and certain investments, a mortgage rate discount, a bonus on a new building saving scheme and a new pension saving scheme, and discounts on various types of insurance. Kate plays an active role in this process.

On the insurance front, we note the success of our cyber risk insurance: since its launch in 2020, we have already sold over 340 000 of these insurance policies. Simultaneously, ČSOB is investing heavily in cybersecurity training.

The Czech Republic was hit by storm Boris in September 2024, causing severe disruption including heavy flooding in the southern and eastern parts of the country. This affected close to 9 000 of our group's clients. Our insurer ČSOB Pojišťovna immediately sent technicians to the affected areas, extended helpline opening hours and accelerated advance payments and claims processing. Roughly 70% of claims reported were settled within a month of the disaster. To support clients affected by the storm, ČSOB also provided loan repayment deferrals of up to six months.

sustainable  
profitable growth

As in previous years, we again recorded substantial growth in lending in 2024, as our loans and advances to customers went up by 7%. Our customer deposits went up by 2%. Sales of non-life insurance increased by 12% in 2024 (with growth in virtually all insurance classes) and sales of life insurance went up by 9% (mainly hybrid products). We adjusted these growth figures for foreign-exchange effects. Assets under management grew by 11% due to net inflow and an increase in asset prices.

bank-insurance +

Our bank-insurance model is delivering numerous commercial synergies. For example, around five to six out of ten ČSOB group clients who took out home loans with the bank in 2024 also purchased home insurance from the group. The number of clients who hold at least one banking product and one insurance product from the group (i.e. bank-insurance clients) made up 83% of the business unit's active clients (clients with a current account into which their income is regularly paid) at year-end 2024, while the number of clients with at least two banking and two insurance products from the group (i.e. stable bank-insurance clients) made up 17% of active clients.

role  
in society

We once again took a number of initiatives in terms of our social engagement, focusing on environmental awareness, financial literacy, entrepreneurship and population ageing. Following the flood disaster (see above), ČSOB immediately launched a public fundraising campaign for charities. ČSOB doubled public donations, bringing the total amount in support for the areas affected to 40 million CZK. In addition, ČSOB donated 5 million CZK through a special grant under its 'ČSOB Helps the Regions' programme.

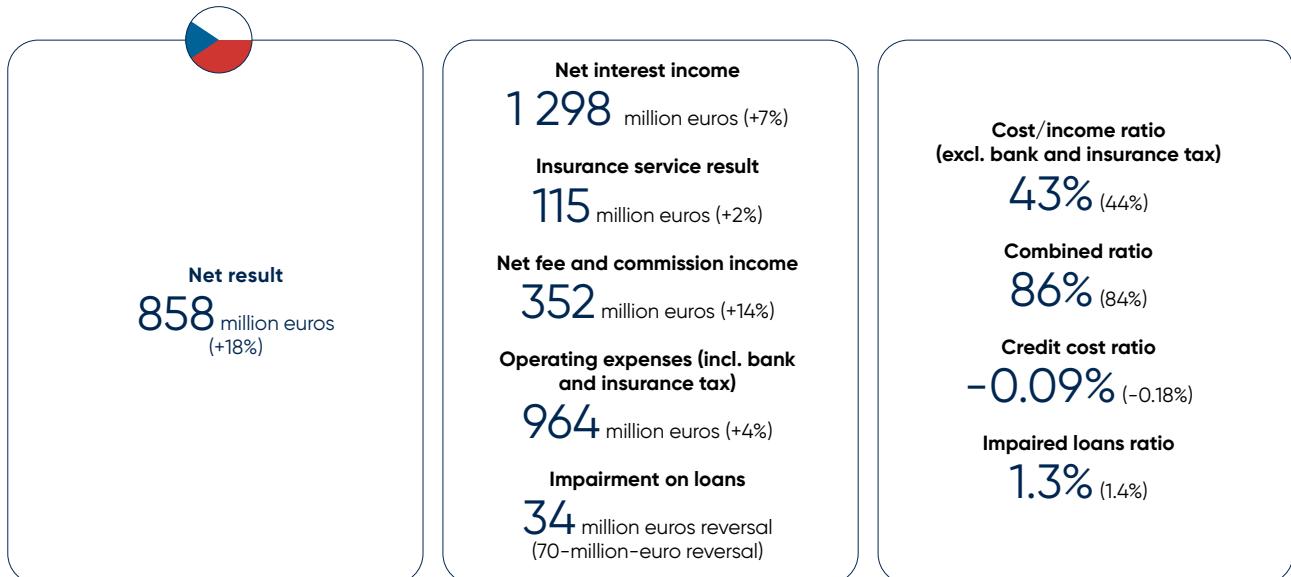

As a leader in ESG, ČSOB aims to enable its SME clients to meet the changing expectations in society as well as the changing EU ESG requirements even better and more efficiently. This was one of the drivers behind the joint venture entered into between KBC and Czech start-up Digital & Legal s.r.o. ('Green0meter') to advise Czech SMEs on their journey to becoming more sustainable.

Regarding the initiatives to stimulate entrepreneurship, Start it @ČSOB continues to be the most important initiative. A great example of this is YoungLink, an app that uses network analysis to identify and understand classroom social dynamics, enabling early detection of bullying and other risky behaviours. Identifying relationships among students gives school psychologists, teachers and parents insight into the social environment of the classroom and the individual's resilience to negative behaviour. Financial literacy also remains one of our main focus areas. Financial education in schools has been an important topic for us since 2016. ČSOB employees visit schools and give young people tips on how

to manage their money based on real-life examples. The programme consists of different components, such as responsible lending, household budget management and complex financial products. We also organise other events on financial literacy. For example, we organised financial advice days for seniors throughout the Czech Republic. Besides financial literacy, we also covered topics such as cybersecurity, powers of attorney and wills.

## 2024 result

Figures for 2024 (the figures in brackets are for, or indicate the difference compared to, 2023). Insurance service result = insurance revenues before reinsurance – insurance service expenses before reinsurance + net result from reinsurance contracts held. A detailed breakdown of the income statement for each business unit and each country can be found in 'Note 2.2: Results by segment' in the 'Consolidated financial statements' section.

- 5% decrease in the average exchange rate of the Czech koruna against the euro. The growth figures in the table and the analysis have been calculated excluding this foreign-exchange effect.
- 7% increase in net interest income. The business unit's loans and advances to customers increased by 7% and customer deposits went up by 2%. The net interest margin for 2024 came to 2.42%, compared to 2.30% in 2023.
- 2% increase in the insurance service result, with the increase in insurance service expenses (partly due to the impact of storm Boris) being offset by an improved reinsurance result and higher insurance revenues.
- 14% increase in net fee and commission income due to higher fees for both asset management services and banking services.
- 10-million-euro increase in all other income items combined.
- 4% increase in costs, due mainly to higher staff expenses and ICT costs and partly offset by lower bank and insurance tax.
- 35-million-euro lower reversal of impairment on loans, due to higher impairment on individual loans and a more or less equal reversal of the remaining reserve for geopolitical and macroeconomic uncertainties.

## International markets

### Macroeconomic context

Growth in both Slovakia and Bulgaria outperformed euro-area growth again in 2024. The Hungarian economy on the other hand was faced with another technical recession from the second quarter of the year with two consecutive quarters of negative growth, but rebounded into positive territory in the fourth quarter. Overall, annual real GDP growth came to 2.1% (estimate) in Slovakia, 2.2% (estimate) in Bulgaria and 0.6% in Hungary.

Inflation in the Central European economies converged somewhat towards that of the euro area in 2024 (2.4%), but still remained above it. This was mainly driven by the dependence on energy imports and the weakness of the Hungarian forint. Inflation in Slovakia, Hungary and Bulgaria stood at 3.2%, 3.7% and 2.6%, respectively.

Falling inflation allowed the National Bank of Hungary (NBH) to lower its key rate further, from 10.75% to 6.50%, at year-end 2024. While further moderate easing is on the horizon for 2025, the NBH will have to take into account inflation trends and the exchange rate of the Hungarian forint. 2024 was a year of trend weakening for the Hungarian forint, as a result of the recession of the Hungarian economy and increased risk factors such as trade conflicts and geopolitical shocks.

Figures for forecast GDP growth in 2025 and 2026 can be found under 'Market conditions in our core markets'.

- UBB: 'Best Digital Bank' and 'Best ESG Bank in Bulgaria' (Euromoney)
- UBB Mobile: 'Best Mobile Banking App in Bulgaria' (Global Finance)
- UBB: 'Bank of the Year' (Bank of the Year foundation)
- UBB: Kite in Bulgaria awarded first prize in the In-house Solutions category (Digital&IT Awards 24)
- K&H: 'Best Bank in Hungary' (Euromoney)
- K&H: 'Best Digital Bank in Hungary' (Euromoney)
- K&H: 'Top Employer' (Top Employers Institute)
- ČSOB Slovakia: 'Best Trade Finance Provider' and 'Best Sub-custodian Bank in Slovakia' (Global Finance)
- ČSOB Slovakia: 'Best Bank for Corporate Responsibility' (Euromoney)
- ČSOB Poistovňa Slovakia: 'Commercial Smart insurance company 2024' and first place in the 'Mobile application of a smart commercial insurance company' category (Smart insurance company of the year survey)

## Specific objectives

- The group strategy presents a number of opportunities for all countries in the business unit, viz.:
  - The further development of unique 'bank-insurance+' propositions.
  - To continue digitally upgrading our distribution model.
  - To drive up the volume of straight-through and scalable processing.
  - To increase the capacity in relation to data and AI to enable us to proactively offer relevant and personalised solutions.
  - To selectively continue expanding our client base and market position with a view to securing a top-three position in banking and insurance.
  - To use data to proactively offer personalised solutions. Our digital assistant Kate, who was launched a couple of years ago, has advanced significantly and in 2025 the innovation will continue at an accelerated pace with the introduction of Kate Coins and Sustainable Mobility Ecospheres.
  - To implement a socially responsible approach in all countries, with a particular focus on environmental awareness, financial literacy, entrepreneurship and health. To be a pioneer for sustainability in all countries.
- Country-specific:
  - In Bulgaria, UBB successfully completed the migration of all clients and products of the former Raiffeisen Bank, concluding the technical merger between the two banks. Both UBB and DZI are market leaders and in the top two in each of their targeted client and product segments. Further focus is now on expanding our franchise, promoting our banking and insurance business and on digital innovation.
  - In Hungary we are focusing on vigorous client acquisition for the bank, to become the undisputed leader in the area of innovation, and to substantially expand our insurance activities, primarily through sales at bank branches for life insurance, and both online and via agents, brokers and bank branches for non-life insurance.
  - In Slovakia we aim to maintain our robust growth in strategic products (i.e. current accounts, mortgages, consumer finance, business loans, leasing and insurance), partly through cross-selling to group clients and via digital channels. Other priorities include the sale of funds and increased fee income.

## 2024 developments

client centricity

We saw rapid growth in the use of our digital channels in Slovakia, Hungary and Bulgaria in recent years. In the past few years we also gradually added even more services to our smartphone apps, focusing in particular on

Kate, our personalised digital assistant, which was launched in Slovakia, Hungary and Bulgaria in 2022. In these three countries combined, close to 1.7 million clients have already used Kate since her launch; moreover, the number of cases resolved fully autonomously by Kate in each of these three countries grew to more than 60% at year-end 2024. More information about Kate can be found in 'The client is at the centre of our business culture'.

A great deal of attention was also devoted to the further improvement of our other mobile banking applications. For example, UBB in Bulgaria successfully introduced the innovative InResto functionality in UBB Mobile, which allows clients to automatically save and invest their spare change. In turn, K&H is the first in the Hungarian market to offer pension insurance sales taking place in mobile from start to end. The range of non-financial services was also expanded. In Slovakia, for example, ČSOB clients can now also use their banking app to buy electronic road vignettes for different countries, and in Hungary a new mobility service was added that allows clients to pay for certain parking services through the mobile app. In fact, the latter option is also already available in Slovakia. Thanks to these continuous innovations, the number of users of our mobile banking apps increased substantially again in 2024: by around 8% in Slovakia, 11% in Hungary and 7% in Bulgaria, totalling nearly 1.7 million users for the three countries of the business unit combined. The share of digital sales in total sales also showed further growth again: based on the key banking products, this accounted for roughly two-thirds of the total sales in Slovakia, half of the total sales in Hungary and a little over a third of the total sales in Bulgaria. In Bulgaria, both UBB Bank and DZI Insurance achieved the highest Net Promoter Scores of all local banks and insurers, respectively.

sustainable  
profitable  
growth

As in previous years, we again posted strong organic growth in the volume of banking and insurance products and asset management in 2024. For the business unit as a whole (excluding exchange rate effects), in 2024 customer deposits grew by roughly 5% and loans and advances to customers grew by 9%. Broken down by country, deposit growth and growth in loans and advances stood at 3% and 3%, respectively, in Slovakia, at 8% and 9%, respectively, in Hungary, and at +5% and +15%, respectively, in Bulgaria. Sales of non-life insurance went up 15% in 2024 (with solid growth in all three countries), and sales of life insurance rose by 1%. And owing to strong net inflow and an increase in asset prices, assets under management grew by no less than 20%.

bank-insurance +

Our focus on bank-insurance delivers many commercial synergies. For instance, home insurance was sold in conjunction with around nine out of ten home loans taken out in each of the three countries. For the business unit as a whole, there was a further increase of 6% in the number of clients who hold at least one banking product and one insurance product from the group companies (i.e. bank-insurance clients) in 2024, while the number of clients with at least two banking and two insurance products from the group companies even went up by 11%. At year-end 2024, bank-insurance clients accounted for 68% of the business unit's active clients (clients with a current account into which their income is regularly paid); stable bank-insurance clients made up 22% of active clients.

role  
in society

We once again took a number of initiatives in terms of our social engagement, focusing on financial literacy, environmental responsibility, entrepreneurship and health. Some examples of recent projects:

Together with Sofia University, we organised a master class in Bulgaria for young entrepreneurs from the Kardzhali region, one of the poorest regions in the country. As part of the project, finance and academic experts help young entrepreneurs in the region set up their own business. In addition, UBB collaborated with SIS, the Coca-Cola Foundation and Cleantech Bulgaria to develop sustainability programmes for SMEs. We launched two initiatives in 2024: an e-learning platform with courses on topics including sustainability, sustainable finance, circular economy and sustainability strategies, and an intensive programme for SMEs and NGOs seeking to integrate sustainability in their business models.

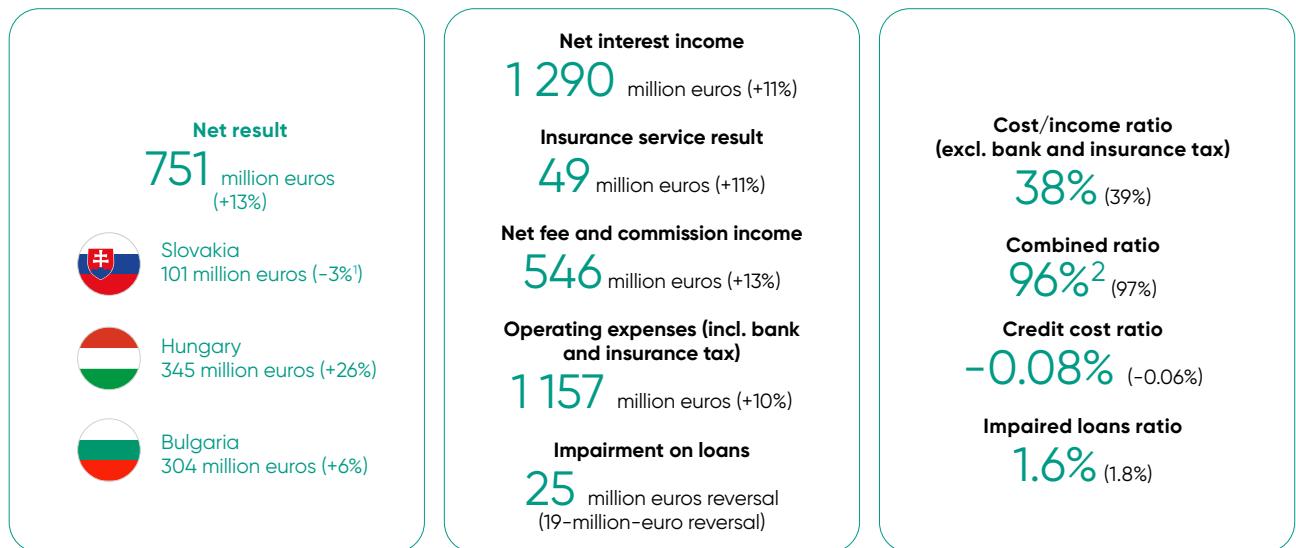

Following ČSOB Czech Republic, we launched a GreenOMeter pilot project in Slovakia. As part of this pilot

project, we invited 150 clients to test the platform, which included a free calculation of their Scope 1 and 2 emissions. The full rollout of the platform is scheduled for early 2025. Additionally, ČSOB Poist'ovňa was the first insurance company in Slovakia to introduce a product specifically for solar panels. This insurance covers general risks, natural disasters and the cost of supplying power from alternative sources in the event of an unscheduled interruption of the power supply from the panels.

In Hungary, we offer our agricultural clients a free greenhouse gas calculator – a unique tool in the market, with modules for calculating emissions from both crops and livestock. The calculator gives our clients insight into their environmental impact and proposes steps they can take to reduce it. We have organised the 'K&H Family Business Club' four times a year every year, since 2015. This club is open to family business owners and their families. Each edition focuses on challenges and topics relating specifically to family businesses.

Furthermore, we are also represented in the start-up community in Bulgaria, Hungary and Slovakia. We remain committed to supporting women entrepreneurs as well as to promoting various sustainability themes in these countries, too.

## 2024 result

Figures for 2024 (the figures in brackets are for, or indicate the difference compared to, 2023). Insurance service result = insurance revenues before reinsurance - insurance service expenses before reinsurance + net result from reinsurance contracts held. A detailed breakdown of the income statement for each business unit and each country can be found in 'Note 2.2: Results by segment' in the 'Consolidated financial statements' section.

<sup>1</sup> Excluding the special bank tax in 2024, earnings growth came to about 21%.

<sup>2</sup> 93% excluding the additional insurance tax in Hungary (94% 2023).

- 4% decrease in the average exchange rate of the Hungarian forint against the euro. The growth figures in the table and the analysis have been calculated excluding this foreign-exchange effect.
- 11% growth in net interest income. The business unit's loans and advances to customers increased by 9% and customer deposits went up by 5%. The net interest margin for 2024 came to 3.25%, roughly stable year-on-year.
- 11% higher insurance service result, with the increase in insurance service expenses being more than offset by the increase in insurance revenues and a higher reinsurance result.
- 13% increase in net fee and commission income, due mainly to higher fees for asset management services and for banking services (mainly payment services).
- 30% drop in the other income items combined (due to lower Net other income).
- 10% increase in costs, due in part to higher staff expenses and ICT costs and higher bank and insurance tax (mainly in Slovakia).
- 5-million-euro higher net reversal of impairment on loans, due to a lower net increase in impairment on individual loans, partly offset by a lower reversal of the remaining reserve for geopolitical and macroeconomic uncertainties (see Note 3.9 in the 'Consolidated financial statements' section).

## Group Centre

Besides financial reporting for the three business units, we also report on a separate Group Centre, which mainly comprises the results of activities and/or decisions focusing specifically on the group (the operating expenses of our group's holding-company activities, certain costs related to capital and liquidity management, and so on) and the results of activities and companies scheduled for run-down, including Exicon (the remaining activities of KBC Bank Ireland) in particular.

The Group Centre generated a net result of -40 million euros in 2024, compared to 97 million euros in 2023. The negative change of 137 million euros was accounted for by:

- a 15-million-euro decrease in net result in Ireland. In both 2024 and 2023, the result for Ireland was heavily impacted

by positive one-off items relating to the sale transactions. In 2024, the liquidation process resulted in tax savings of 318 million euros (in 'Income tax expense') and in 2023 the sale of the remaining loans and deposits led to one-off items totalling 365 million euros (in several items, mainly in 'Net other income'). More information on this matter can be found in Note 6.6 of the 'Consolidated financial statements'.

- a 122-million-euro decrease in net result for the other items, owing primarily to the combination of lower income (due mainly to lower trading and fair value income and net interest income), lower reinsurance result and higher impairment on loans.

# How do we manage our risks?

Mainly active in banking, insurance, and asset management, we are subject to a number of industry-specific risks including credit risk, interest and exchange rate risk, liquidity risk, insurance underwriting risk, operational risk and other non-financial risks. ESG-related risks are not considered in isolation but identified as key risks which manifest themselves through these risk areas. Furthermore, integrated risks occur when the aforementioned risks accumulate and possibly reinforce each other. Continuous and holistic risk management is in place to actively identify, manage and assess the material risks KBC is exposed to. This section outlines our risk governance model and the most significant risks we encounter and how these are managed. More detailed information is available in the KBC Risk Report.

Our statutory auditors have audited the information in this section that forms part of the IFRS financial statements.  
This information is marked with **AUDITED**

## Introduction

Sound risk management is the result of a strong risk culture, adequate resources (sufficient and skilled people, data and tooling), an effective organisation and a qualitative design and implementation of strict governance and effective risk management processes, which are aligned to and transform in sync with the external context, the KBC business model and its various activities, processes and so on.

KBC and the financial sector as a whole operate in a rapidly changing environment characterised by volatility, uncertainty, complexity and ambiguity:

- The financial industry is undergoing a major transition, with the digital transformation bringing new opportunities (e.g., the opportunity to embed artificial intelligence (AI), big data analysis and automation technologies in our operations to make our interactions with our clients instant, straight-through and friction-free) and challenges (including in the areas of cyber risk, ethical AI and new digital competitors).
- At the same time, the financial sector plays a crucial role in the transition to a greener and more sustainable economy: financial institutions not only need to reflect on their own activities, taking into account all new regulations, but also have a crucial role in helping their clients to make the transition towards a more sustainable world.
- On top of this, the industry continues to face major macroeconomic, financial and geopolitical challenges and instability, whereas regulatory and supervisory pressure and uncertainty continue to be extremely challenging.

KBC responds to these key challenges with its data-driven digital strategy, aiming to create ecosystems that help our clients to save time and money by combining financial and non-financial services, and with its ambition to contribute to a more sustainable world.

The risk, compliance and actuarial functions (which together form the 'CRO Services') support KBC in achieving these strategic objectives, contribute to its resilience and agility, provide management and the Board with insights supporting risk-conscious decision-making and inform them about the risks KBC is facing. Priorities for risk management are defined in the KBC Risk Strategy. This strategy finds its origin in the KBC Risk Appetite, the

Corporate Strategy and the Pearl Culture, and sets the bar for risk management throughout KBC. To remain in sync with the changing business environment and the KBC Corporate Strategy, the risk, compliance and actuarial functions regularly assess and update their strategy, considering all relevant elements (e.g., top risks), including the 'external supervisory view' and upcoming regulatory changes. In this way, we continuously adapt and further strengthen KBC's Risk Management Framework and its underlying risk management processes.

KBC has a strong corporate culture which guides the actions of our KBC colleagues in all their activities and which is also reflected in the way risks are managed and decided on throughout the entire organisation. The vision of KBC's Risk Management is to put risk in the hearts and minds of all staff to help KBC create sustainable growth and earn its clients' trust. To maintain and grow trust, it is important that we behave responsibly in everything we do, across all layers of the organisation. This means that the mindset of all KBC staff should extend beyond regulations and compliance. These aspects are captured via the 'risk culture', which encompasses the collective mindset and the shared set of norms, attitudes and values that shape the everyday behaviour of our employees in terms of awareness, management and control of risks. The strong risk culture is reflected, for example, in business proposals which include a thorough assessment of the risks involved, and in the thoughtful consideration in the decision-making process of the challenge of and opinions on these proposals, made by the risk function.

The strategy of the risk, compliance and actuarial functions is based on three key pillars:

- Support the business: we support, advise and challenge the business both in its everyday activities ('business as usual') and in its transformation, aiming to help it keep KBC's control environment up to standards and respect KBC's risk appetite at all times.
- Transform ourselves: in sync with the KBC Corporate Strategy and business we become more digital, data-driven and

straight-through. By being more efficient and effective in our business-as-usual processes, we create room to develop approaches for new risks. Moreover, we extend and improve our risk and compliance framework for an increasingly digital, interconnected and sustainable future.

- People: we attract and nurture talent, building an engaged workforce of the future as an enabler of transformation and the execution of our business as usual. We ensure that our people have a clear view of KBC's strategic direction, how KBC's transformation impacts their job and how they contribute to KBC's strategy.

## Managing risks in 2024

In 2024, geopolitical risks increased further, as evidenced by the continuing Russia-Ukraine conflict, the conflict in Gaza/Israel and the Middle East, tensions between the US and China, etc. Furthermore, a significant number of elections, including in the US, added to the geopolitical uncertainty. These events put additional pressure on economic competitiveness in Europe, causing significant challenges for the economy and financial markets in general, and for the financial sector in particular (including in the areas of credit risk, market risk, liquidity risk, and operational risk).

Regulatory developments (including in relation to capital requirements, operational resilience and the new DORA requirements regarding third parties, anti-money laundering regulations, GDPR and ESG) also remained a dominant theme for the sector, as did enhanced consumer protection. Digitalisation (with technology, including AI, as a catalyst) presents both opportunities and threats to the business model of traditional financial institutions. More specifically, cyber risks (reinforced by the use of AI and deepfake technologies) have become one of the main threats over the past few years and are fuelled by international conflicts, such as the war in Ukraine.

Lastly, climate and environmental-related risks are becoming increasingly prevalent. This was evidenced by storm Boris,

which caused abundant rainfall for several days in September, leading to severe floods in Central and Eastern Europe. The damage in KBC home countries was the largest in the Czech Republic, but Slovakia and – albeit to a lesser extent – Hungary were also hit. For KBC, the financial consequences were predominantly linked to its insurance activities. KBC is fully aware of the risks posed by the possible effects of environmental change on its business model and continues to assess this (see the Sustainability Statement in this report and the KBC Risk Report 2024).

## Risk governance AUDITED

Our risk governance model includes the following main elements:

- The Board of Directors (Board), supported by the Risk & Compliance Committee, decides on the risk appetite – defining the group's overall risk playing field and the risk strategy – and supervises KBC's risk exposure in relation to this risk appetite. It is also accountable for having robust governance arrangements in place to ensure that all material risks of KBC Group are managed appropriately and for promoting a sound, consistent group-wide risk culture.
- The Risk & Compliance Committee (RCC) is an advisory committee that advises on topics for which the Board is accountable, such as the group's risk appetite, the monitoring of risk exposure compared to the group's risk

appetite and the supervision of the implementation, efficiency and effectiveness of the Enterprise Risk Management Framework.

- The Executive Committee (ExCo) is the management committee responsible for integrating risk management, operating in alignment with decisions taken by the Board related to risk appetite, strategy, and performance goals.
- The ExCo is supported by the CRO Services Management Committee (CRO Services MC), risk committees (right-hand side of the figure) and business committees (left-hand side of the figure).

We manage our risks using the 'Three Lines of Defence' model:

- Risk-aware business people act as the first Line of Defence for conducting sound risk management. This involves allocating sufficient priority and capacity to risk topics, performing the right controls in the right manner and making sure that the risk self-assessment of the business side is of a sufficiently high standard.
- In line with regulations, independent control functions, at both group and local level, act as (part of) the second Line of Defence:
  - The risk function develops, imposes and monitors consistent implementation of the Enterprise Risk Management Framework, describing the processes, methods and approaches to identify, measure and report on risks and to define the risk appetite. To strengthen the voice of the risk function and to ensure that the decision-making bodies of the business entities

are appropriately challenged on matters of risk management and receive expert advice, KBC has deployed independent Chief Risk Officers (CROs) throughout the group. Risk departments at group (Group Risk, Group Credit Risk Directorate and Model & Model Risk Management Division) and local level (present in the main entities in our home countries) support the CROs and work closely together. Close collaboration with the business is assured since the independent CROs are present in management committees and take part in the local decision-making process, while their independence is achieved through a functional reporting line to the Group CRO. If necessary, they can exercise a right of veto.

- The compliance function's prime objective is to prevent KBC from running a compliance risk (i.e. incurring loss or damage – regardless of its nature – due to non-compliance with applicable laws, regulations or internal rules) that falls either within the scope of the compliance function or within the areas assigned to it by the ExCo (as described in the Integrity Charter). The compliance

function is characterised by its specific status (as provided for by law and regulations and described in the Compliance Charter), its place in the organisation chart (Group Compliance, hierarchically under the CRO) and the associated reporting lines (reporting to the RCC and even to the Board in certain cases).

- The actuarial function ensures additional quality control by providing expert technical actuarial advice to the supervisory body, the RCC and the executive body of KBC Group, of KBC Insurance and all reinsurance and insurance entities within the group. Such advice covers the calculation of the technical provisions for insurance liabilities, the reinsurance policy and underwriting risk. As described in the 'Actuarial Function Charter', in order to safeguard independence, the actuarial function holder reports functionally to the Group CRO.
- Internal audit acts as the third Line of Defence. It is responsible for giving reasonable assurance to the Board that the overall internal control environment is effective, and that effective policies and processes are in place and applied consistently throughout the group.

## Components of sound risk management

Risk management refers to the coordinated set of activities to proactively identify and manage the risks that KBC faces. It helps KBC to achieve its objectives and to realise its strategy.

The KBC Enterprise Risk Management Framework (ERMF), approved by the Board, defines the risk governance, including the Three Lines of Defence, and sets clear rules and procedures on how risk management should be performed throughout the group. It refers to a set of minimum standards and risk methods, processes and tools that must be translated into all risk-type-specific Risk Management Frameworks (RMFs) and that all entities must adhere to. The ERMF and risk-type-specific RMFs not only detail how KBC manages risks in business as usual, but also in times of change (small and big transformations) and crisis situations, up to the most stressful situations (like recovery and resolution). They also aim to keep KBC compliant with regulatory requirements. Moreover, they cover risks originating from KBC's own operations as well as from the value chain (e.g., the provision of products and services to clients, and outsourcing activities).

In order to continuously safeguard their relevance, the ERMF and risk-type-specific RMFs are annually reviewed, in addition to a formal annual assessment of the quality of their implementation. In our risk taxonomy, environmental, social and governance risks are identified as key risks related to KBC's business environment which manifest themselves through (all) other traditional risk areas, such as credit risk, technical insurance risk, market risk, operational and reputational risk. As such, ESG is not considered in isolation, but firmly embedded in all aspects and areas of KBC's ERMF and underlying processes. For more information on how ESG risk management is performed throughout the group, we refer to the Sustainability Statement in this report and to the KBC Risk Report 2024.

The risk management process consists of risk identification, risk measurement, setting and cascading risk appetite, risk analysis, reporting, response and follow-up.

### Risk identification

Risk identification is the process of systematically and proactively discovering, assessing and describing risks, both within and outside KBC, that could negatively impact the group's strategic objectives today and in the future. Not only the sources of risk are analysed, but also their potential consequences and – in a later step – materiality.

For the purpose of risk identification, KBC has set up robust and solid processes, at both the strategic and operational level, to uncover all material risks to which KBC is exposed.

These include:

- The Risk Scan, which is a strategic group-wide exercise aimed at identifying and assessing the top risks for KBC, i.e. the risks that keep managers 'awake at night' because they can severely undermine KBC's business model, financial stability and long-term sustainability. The identified top risks are inputs for the yearly financial planning process and for several risk management exercises, including for defining the priorities of the risk function, risk appetite setting and stress testing.
- The New and Active Products Process (NAPP), which is a group-wide, formalised process to identify and mitigate product-related risks, both for KBC and for its clients. Within the group, no products, client-facing processes or services can be created, purchased, changed or sold without approval in line with NAPP governance. The risk department also conducts periodic assessments of the impact of the expanded and/or updated product and service offering on the group's risk profile.
- Risk signals, which are continuously collected at all levels of the organisation (group and local). The internal and external environments are constantly scanned, using all possible sources of information, to detect events or changes that can potentially impact the group, either directly or indirectly. Risk signal reporting provides management with a summary of the identified risks, their potential impact and possible remedial actions.
- Deep dives and challenges (e.g., in-depth or case studies, detailed risk assessments, ethical hacking, etc.) are performed to gain additional insights into the risk profile or into potential (future) vulnerabilities for KBC and/or to test the strength and maturity of the control environment (i.e. a check on whether the risk requirements and controls imposed by the ERMF are properly implemented).

## Risk measurement

KBC defines risk measurement as 'the action to come to a quantitative expression of a risk, or a combination of risks, on a portfolio of instruments/exposures by applying a model or methodology'. Once risks have been identified, certain attributes of the risk can be assessed, such as impact, probability of occurrence, size of exposure, etc. This is done with the help of risk measures, which allow us to assess the materiality of risks, to monitor them over time (with a frequency that is appropriate for the risk type) and to assess the impact of risk management actions.

Risk measures (including the calculation method used) are designed to measure a specific risk or multiple risks at the same time and can be either internally developed or imposed by the regulator. An overview of the extensive set of risk measures in use in KBC (both regulatory and internally

defined) is provided in the ERMF and risk-type-specific frameworks.

In order to ensure that risk measures are and remain fit for use and are of high quality, they are subject to strict and robust processes, including adequate documentation and strong governance. Regular reviews and the use of the 'four-eyes principle', including independent internal validation where appropriate, further enhance the accuracy and reliability of these risk measures. All requirements that relate to these processes are documented in the KBC Risk Measurement Standards (RMS).

## Setting and cascading risk appetite

Taking and transforming risks is an integral part – and hence an inevitable consequence of – the business of a financial institution. Therefore, KBC does not aim to eliminate all the risks involved (risk avoidance) but instead seeks to identify, control and manage them in order to make optimal use of its available capital (i.e. risk-taking as a means of creating value).

KBC's tolerance for risk is captured via its 'risk appetite'. This risk appetite expresses – both qualitatively and quantitatively – how much and which types of risk we want to take and within which boundaries they should be managed. The ability to accept risk is limited by financial constraints (available capital and liquidity buffers, borrowing capacity, etc.), non-financial constraints (strategic ability, skills, legal constraints, etc.) and regulatory restrictions (e.g., regulatory floors on capital and liquidity ratios). The willingness to accept risk depends on the interests of the various stakeholders. A key component in defining risk appetite is therefore an understanding of the expectations of the organisation's key stakeholders.

Risk appetite is made explicit via the 'risk appetite statement' (RAS), which is decided at both group and local level. The RAS reflects the view of the Board and the ExCo on the acceptable level and composition of risks, ensuring coherence with the desired return and allowing the group to implement its corporate strategy within a clear risk playing field. The high-level risk appetite objectives, which are annually reviewed and reconfirmed by the Board, are further detailed for each separate risk type via qualitative and quantitative statements and via a risk appetite label, which can be Low, Medium or High. The long-term risk appetite is monitored based on a set of risk measures for which risk thresholds are defined. Lastly, risk appetite is translated into risk-type-specific group limits/targets (annually approved by the Board), which are further cascaded down to the entities (annually approved by the ExCo).

As the risk appetite defines the playing field for the business, the risk appetite process is firmly embedded in the financial planning cycle. The Board annually approves the preliminary

risk appetite as input into the planning cycle. The financial planning is approved by the Board after a final check has been performed to determine whether the preliminary risk appetite is respected throughout the planning horizon. To ensure that the risk profile remains within the risk appetite when executing the financial plan, the risk appetite is translated into concrete early warning levels and limits. Furthermore, for some indicators, we also set recovery and resolution triggers which, if breached, trigger the activation of the Recovery/Resolution Plan.

### Risk analysis, reporting, response and follow-up

Risk analysis and reporting aim to give management an increased level of transparency by ensuring a comprehensive, forward-looking and ex-post view of the development of the risk profile versus the risk appetite and of the context in which KBC operates.

This is done via reports that are tailored to the needs of the recipients and recognise the different information needs of the Board, the RCC, the ExCo, top management and other levels of the organisation, helping them to understand the potential issues and to take the relevant actions. In addition

to internal reporting, external reports are also prepared for the different stakeholders of KBC, in particular clients, shareholders, debt holders, supervisory authorities, regulators and rating agencies.

The ExCo, the RCC and the Board receive periodic and ad hoc updates on KBC's risk landscape through comprehensive internal risk reporting. This includes the 'Integrated Risk Report' (IRR), which is submitted to these committees eight times per year. This holistic risk report consists of risk signals considered material for the group, allowing us to take timely action if and as needed, and of an overview, for all risk types, of the development of various risk measures versus the risk appetite via the 'health check' dashboard. The IRR is complemented with ad hoc reporting when required. For instance, at least twice a year, it is supplemented with a detailed climate risk dashboard and an information risk management dashboard.

The main external reports to the supervisory authority include the ICAAP (Internal Capital Adequacy Assessment Process), ILAAP (Internal Liquidity Adequacy Assessment Process), and ORSA (Own Risk and Solvency Assessment) reports. These provide a holistic and substantiated

underpinning of the opinion of the Board and the ExCo on the adequacy of KBC's capital and liquidity. For this purpose, we have internal economic capital models in place to complement the existing regulatory capital models. These allow us to assess our capital adequacy from an internal perspective, in addition to the regulatory perspective. These reports are complemented by an annual FICO (Financial Conglomerate) report which zooms in on additional risks that could be triggered by KBC being a Financial Conglomerate and on their mitigation. In the context of crisis management regulation, the Recovery Plans of KBC Group, KBC Bank and KBC Insurance are created to prepare the possible responses in case of (strong) adverse financial circumstances and to allow KBC to act more rapidly and effectively in a crisis situation. In case all mitigating actions in business as usual and in crisis management mode fail, the Resolution Plan is activated, which describes the strategy for rapid and orderly resolution in the event of material financial distress and failure of KBC.

## Stress testing

Stress testing is an important tool to support our risk management and decision-making processes by simulating the potential negative impact of specific events and/or movements in risk factors on KBC's (financial) condition, so that we can better prepare for these situations or adjust our risk exposure proactively.

For this purpose, KBC has developed a comprehensive set of stress tests, ranging from plausible to exceptional and even extreme events or scenarios, both at the level of individual risk types and across risk types (integrated stress tests). Integrated

stress testing is an important tool to assess to what extent KBC's capital is adequate to cover its risks, whether profit generation is sustainable, etc., under various conditions. It complements stress testing per risk type as it looks at the interaction and combined impact of stress across multiple risk types, including interaction and feedback loops between stresses on financial indicators. The stress testing mix reflects an appropriate balance of different severities of stress, stress testing methodologies, etc., both at integrated and risk-type-specific level. It is kept relevant and up to date via a yearly review.

The outcome of some of the main integrated stress tests is used in important risk management processes and reporting, including ICAAP, ILAAP and ORSA, and recovery and resolution planning. As part of the annual ICAAP, ILAAP and ORSA processes, KBC simulates a once-in-20-years stress event to check and demonstrate that it is able to meet the regulatory capital and liquidity requirements and internal risk appetite targets even under such stressed conditions. Stress tests designed in the context of recovery planning are even more severe and bring KBC to the brink of default. In such scenarios, KBC needs to demonstrate its recovery capacity (in terms of both depth and speed of capital-increasing and risk-reducing actions). Finally, stress testing in the context of resolution prepares KBC for situations when the group is no longer viable and authorities need to step in to either save (via bail-in mechanisms) or liquidate the group.

On top of stress testing performed on KBC's own initiative (at group and/or local level), the regulator and supervisory authority can also impose stress tests (e.g., biannual EBA Stress Test, annual EIOPA stress tests, ECB cyber stress test).

## Credit risk

Credit risk is the risk related to non-payment or non-performance by a contracting party, due to that party's insolvency or lack of willingness to pay or perform, or to events or measures taken by the political or monetary authorities of a particular country.

### Managing credit risk AUDITED

In the area of credit risk, the ExCo is supported by the Group Lending Committee (GLC), which manages KBC's credit risk and the resulting capital requirement in the area of lending. The governance, rules and procedures on how credit risk management should be performed throughout the group are outlined in the Credit Risk Management Framework (CRMF). Its implementation is monitored by Group Credit Risk (GCRD) and its Credit Risk Competence Centre. GCRD works in close cooperation with the local CROs and local risk departments, which are responsible for the local implementation of the CRMF. Business entities are consulted for those areas of the CRMF that impact business processes and/or governance.

### The building blocks for managing credit risk AUDITED

- **Risk identification:** several risk identification exercises as described in the 'Components of sound risk management' section apply to the credit risk management context (such as the collection of risk signals). A vital part of the credit risk identification process is capturing credit risk signals, both at transactional and portfolio level. Both the internal and external environment are scanned for events or developments that have already occurred or could occur and which directly or indirectly have or could have a significant impact on credit quality. In addition, thematic and sectoral deep dives are performed to gain further insights into credit risk.

New and upcoming prudential (capital) credit risk regulation, product or client-specific regulation and legislation is followed up at group or local level to ensure that these are promptly implemented in KBC's policies and instructions.

A specific risk identification process is the leading indicator process designed to identify emerging credit risks that could lead to impairment. The main objective is to have a reliable estimate of impairment for the current quarter at an early stage, thus avoiding surprises. It is part of the quarterly reporting round on loan and bond impairment.

- **Risk measurement:** credit risk measurement involves a quantitative expression of a credit risk on a portfolio of instruments/exposures by applying a model or methodology. A minimum group-wide set of credit risk measurements is defined and can be complemented with local measurements.

Central to this is the risk class, with a ranking being made based on the Probability of Default (PD) and the Loss

Given Default (LGD). The latter reflects the estimated loss that would be incurred if an obligor were to default. In order to determine the risk class, we have developed various rating models for measuring how creditworthy borrowers are and for estimating the expected loss of various types of transactions. A number of uniform models throughout the group (models for governments, banks, large companies, etc.) are in place, while others have been designed for specific geographic markets (SMEs, private individuals, etc.) or types of transaction. We use the same internal rating scale throughout the group.

We use the output generated by these models to split the non-defaulted loan portfolio into internal rating classes ranging from 1 (lowest risk) to 9 (highest risk) for the PD. We assign PD 10 to PD 12 to a defaulted obligor. PD class 12 is assigned when either one of the obligor's credit facilities is terminated by the bank, or when a court order is passed instructing repossession of the collateral. PD class 11 groups obligors that are more than 90 days past due (in

arrears or overdrawn), but that do not meet PD 12 criteria. PD class 10 is assigned to obligors for which there is reason to believe that they are unlikely to pay (on time), but that do not meet the criteria for classification as PD 11 or PD 12. 'Defaulted' status is fully aligned with the 'non-performing' and 'impaired' statuses. Obligors in PD classes 10, 11 and 12 are therefore referred to as 'defaulted' and 'impaired'. Likewise, 'performing' status is fully aligned with the 'non-defaulted' and 'non-impaired' statuses.

Impairment losses are recorded according to IFRS 9 requirements (calculated on a lifetime expected credit loss (ECL) basis for defaulted borrowers and on a 12-month or lifetime ECL basis for non-defaulted borrowers, depending on whether there has been a significant increase in credit risk and a corresponding shift from 'Stage 1' to 'Stage 2'). Specific collective IFRS 9 models are used for this purpose, except for material defaulted borrowers, which are assessed individually to estimate ECL.

Together with 'probability of default' and 'exposure at default', measures such as 'expected loss' and 'loss given default' form the building blocks for calculating the regulatory capital requirements for credit risk, as KBC has opted to use the Internal Ratings-Based (IRB) approach for most of its portfolios. Since the end of 2023, the following entities and portfolios have switched to the Standardised approach due to model simplification: the entities ČSOB in Slovakia, K&H, the sovereign portfolios in the entire KBC Group and some immaterial portfolios in the Belgium Business Unit and ČSOB in the Czech Republic. Apart from the above-mentioned exceptions, the main group entities in Belgium and the Czech Republic continue to adopt the IRB Advanced approach, while non-material entities as well as the entire International Markets Business Unit adopt the Standardised approach.

- **Setting and cascading risk appetite:** the KBC Risk Appetite Statement defines the amount of credit risk KBC is able and willing to accept in pursuit of its strategic objectives. Credit risk appetite is made tangible by assigning credit risk limits and early warning levels to a limited set of credit risk (signal) indicators, which are valid for one year.

Primary credit risk limits are decided by the Board of Directors or the Executive Committee. These entail limits on Expected Loss (EL), Stressed Credit Loss (SCL) and Credit Risk-Weighted Assets (RWA) and, for new home loan production, Loan-to-Value (LTV) and Debt-Service-To-Income (DSTI). These limits are supplemented by a portfolio limit system (PLS) framework to constrain concentration risk on counterparty groups or authorities and other credit risk limits set at group or local level that include sector and activity limits and limits on risks, such as counterparty credit risk for professional transactions or issuer risk.

The risk playing field is also determined by group-wide risk boundaries defined in Credit Risk Standards, which aim to align the risk management of specific credit-risk-related topics throughout the group by defining restrictions and/or recommendations.

- **Risk analysis, reporting, response and follow-up:** the loan portfolio is analysed on a continuous basis. In addition to portfolio analyses performed by the business, the local and group credit risk departments analyse the credit risk profile of the loan portfolio in order to obtain an independent view of the evolution of credit risk. The results of the analyses are reported to the appropriate risk committees. It is the responsibility of both line management and the risk committees to respond, i.e. to keep or bring risks in line with the risk appetite. Corrective action plans can be taken to avoid (further) credit risk, reduce it (mitigation), transfer the risk or accept it.
- **Stress testing:** stress testing is a core component of sound credit risk management and is performed at local and group level.

## Credit risk exposure in the banking activities arising from lending and investing

Credit risk arises in both the banking and insurance activities of the group. As regards the banking activities, the main source of credit risk is the bank's loan portfolio. It includes all the loans and guarantees that KBC has granted to individuals, companies, governments and banks. Debt securities are included in the investment portfolio if they are issued by companies or banks. Government bonds are not included in the investment portfolio. Furthermore, the table does not take into account the credit risk related to the trading book (issuer risk) and the counterparty credit risk related to derivative transactions. We describe these items separately below.

The loan and investment portfolio as defined in this section differs from 'Loans and advances to customers' in Note 4.1 of the 'Consolidated financial statements' section. For more information, please refer to the 'Glossary of financial ratios and terms'.

Note that, as regards the table below, more detailed breakdowns are available in KBC's quarterly reports (at [www.kbc.com](http://www.kbc.com)) and (as regards stages) in Note 1.2 of the 'Consolidated financial statements' section.

## Forbearance measures

Forbearance measures consist of concessions towards a borrower facing, or about to face, financial difficulties. They may involve lowering or postponing interest or fee payments, extending the term of the loan to ease the repayment schedule, capitalising arrears, declaring a moratorium or providing debt forgiveness.

A client with a loan qualifying as forborne will in general be assigned a PD class that is worse than before the forbearance measure was granted, given the increased risk of default. When that is the case, the client's unlikelihood to pay is also assessed (according to specific 'unlikely to pay' criteria). In accordance with IFRS 9 requirements, a facility tagged as 'forborne' is allocated to 'Stage 2' (if the client/facility is classified as 'non-defaulted') or to 'Stage 3' (if the client/facility is classified as 'defaulted').

KBC applies criteria that are consistent with the corresponding EBA standards to move forborne exposures

from 'defaulted' to 'non-defaulted' status and to remove the forbearance status. If a client/facility has been assigned 'defaulted' status (before or at the time forbearance measures are granted), the client/forborne facility (depending on whether defaulted status is assigned at client or facility level) must remain defaulted for at least one year. Only upon strict conditions can the client/facility be reclassified as 'non-defaulted'. A forborne facility with a 'non-defaulted' status will be tagged as 'forborne' for at least two years after the forbearance measure has been granted, or after the client/facility becomes non-defaulted, and can only be removed when strict extra criteria have been met (non-defaulted, regular payments, etc.). As a forbearance measure constitutes an objective indicator (i.e. impairment trigger) that requires assessing whether impairment is needed, all forbearance measures are subject to an impairment test.

On-balance-sheet exposures with forbearance measures: gross carrying value <b>AUDITED</b> (in millions of EUR)	Opening balance	Loans which are no longer considered to be forborne			Repayments	Write-offs	Other <sup>1</sup>	Closing balance
		Loans which have become forborne	Decrease in impairment on loans which have become forborne	Increase in impairment because loans are no longer forborne				
2024	2 303	545	-683	-334	-16	28	1 843	
2023	2 939	642	-1 001	-361	-20	103	2 303	
On-balance-sheet exposures with forbearance measures: impairment (in millions of EUR)	Opening balance	Existing impairment on loans which have become forborne	Decrease in impairment because loans are no longer forborne	Increase in impairment on forborne loans	Decrease in impairment on forborne loans	Other <sup>2</sup>	Closing balance	
2024	387	71	-61	100	-93	-4	400	
2023	428	63	-55	86	-122	-13	387	

1 Includes foreign-exchange effects for loans granted in currencies other than the local currency, changes in the drawn/undrawn portion of facilities, increases in the gross carrying value of existing forborne loans and additions or disposals through business combinations.

2 Includes the use of impairment in respect of write-offs and additions or disposals through business combinations.

Forborne loans	As a % of the outstanding portfolio	Breakdown by PD class (as a % of the entity's portfolio of forborne loans)			
		PD 1-8		PD 9	PD 10 (impaired, less than 90 days past due)
		PD 1-8	PD 9	PD 10 (impaired, less than 90 days past due)	PD 11-12 (impaired, 90 days and more past due)
31-12-2024					
Total	1%	33%	6%	42%	20%
By client segment					
Private individuals <sup>1</sup>	1%	63%	3%	27%	7%
SMEs	1%	29%	15%	33%	23%
Corporations <sup>2</sup>	1%	17%	2%	56%	26%
31-12-2023					
Total	1%	33%	8%	46%	14%

Private individuals <sup>1</sup>	1%	64%	3%	25%	8%
SMEs	1%	30%	12%	42%	16%
Corporations <sup>2</sup>	1%	13%	8%	63%	16%

1 84% of the forborne loans total relates to mortgage loans in 2024 (86% in 2023).

2 19% of the forborne loans relates to commercial real estate loans in 2024 (32% in 2023).

## Other credit risks in the banking activities

*Trading book securities.* These securities carry an issuer risk (potential loss should the issuer default). We measure exposure to this type of risk on the basis of the market value of the securities. Issuer risk is curtailed through the use of limits both per issuer and per rating category.

*Government securities in the investment portfolio of banking entities.* We measure exposure to governments in terms of nominal value and book value. Such exposure relates mainly to EU states. We have put in place limiting caps for both non-core and core country sovereign bond exposure. Details on the exposure of the combined banking and insurance activities to government bonds are provided in a separate section below.

*Counterparty credit risk of derivatives transactions.* The amounts shown in the table below are the group's pre-settlement risks, which are measured using the internal model method for interest rate and foreign exchange derivatives in the Belgium Business Unit. For inflation, equity and commodity derivatives, pre-settlement risks are calculated as the sum of the (positive) current replacement value ('mark-to-market' value) of a transaction and the applicable add-on. This calculation is also used for measuring pre-settlement risks for interest rate and foreign exchange derivatives in the other business units. Risks are curtailed by setting limits per counterparty. We also use close-out netting and collateral techniques. Financial collateral is only taken into account if the assets concerned are considered eligible risk mitigants for regulatory capital calculations.

**Other credit exposure, banking AUDITED**  
(in billions of EUR)

	31-12-2024	31-12-2023
Issuer risk <sup>1</sup>	0.05	0.05
Counterparty credit risk of derivatives transactions <sup>2</sup>	4.1	4.2

1 Excluding a nominative list of central governments, and all exposure to EU institutions and multilateral development banks.

2 After deduction of collateral received and netting benefits.

## Credit risk exposure in the insurance activities

For the insurance activities, credit exposure exists primarily in the investment portfolio and towards reinsurance companies. We have guidelines in place for the purpose of controlling credit risk within the investment portfolio with

regard to, for instance, portfolio composition and ratings. The upper part of the table below shows the market value of the investment portfolio of the insurance entities broken down by asset type under Solvency II, while the lower part provides more details of the bond and other fixed-income security components of the portfolio.

	31-12-2024	31-12-2023
<b>Investment portfolio of KBC group insurance entities (in millions of EUR, market value)<sup>1</sup> AUDITED</b>		
<b>Per asset type (Solvency II)</b>

More than 10 years	28%	30%

1 The total carrying value amounted to 36 759 million euros at year-end 2024 and to 34 155 million euros at year-end 2023. Figures differ from those appearing in Note 4.1 of the 'Consolidated financial statements' section, due to asset class reporting under Solvency II.

2 Representing the assets side of unit-linked (class 23) products and completely balanced on the liabilities side. No credit risk involved for KBC Insurance.

3 Excluding investments for unit-linked life insurance. In certain cases, based on extrapolations and estimates.

4 Including covered bonds and non-bank financial companies.

We are also exposed to a credit risk in respect of (re)insurance companies, since they could default on their commitments under (re)insurance contracts concluded with us. We measure this particular type of credit risk by means of a nominal approach (the maximum loss) and expected loss (EL), among other techniques. Name concentration limits

apply. Probability of Default (PD) and expected loss is calculated using internal or external ratings. We determine the exposure at default (EAD) by adding up the net loss reserves and the premiums, and the loss given default (LGD) percentage is fixed at 50%.

Credit exposure to (re)insurance companies by risk class <sup>1</sup> : AUDITED EAD and EL <sup>2</sup> (in millions of EUR)	EAD 2024	EL 2024	EAD 2023	EL 2023
AAA up to and including A-	228	0.1	178	0.1
BBB+ up to and including BB-	14	0.0	3	0.0
Below BB-	0	0.0	0	0.0
Unrated	0	0.0	0	0.0
Total	242	0.1	181	0.1

1 Based on internal ratings.

2 EAD figures are audited, whereas EL figures are unaudited.

## Market risk in non-trading activities

Market risk relates to changes in the level or in the volatility of prices in financial markets. The process of managing our structural exposure to market risks in the non-trading activities covers interest rate risk, gap risk, basis risk, option risk (such as prepayment risk), currency risk, equity price risk, real estate price risk, credit spread risk and inflation risk. 'Structural exposure' encompasses all exposure inherent in our commercial activity or in our investments (banking and insurance). Trading activities are therefore not included. This process is also known as Asset/Liability Management (ALM).

### Managing market risk in non-trading activities AUDITED

In the area of market risk in the non-trading activities, the ExCo is supported by the Group Asset and Liability Committee (GALCO), which is to provide assistance in the area of (integrated) balance sheet management at group level. The governance, rules and procedures and how asset and liability risk management is performed throughout the group are outlined in the Non-Trading Market Risk Management Framework. Its implementation is monitored by the Market Non-Trading Risk Competence Centre of Group Risk. Within the risk function, the ALM & Liquidity Risk Council, chaired by the CRO Markets & Treasury, aims to establish, facilitate, promote and support the solid and efficient integration of all tasks assigned to the local and group risk departments covering ALM and liquidity risks.

### The building blocks for managing market risk in non-trading activities AUDITED

- **Risk identification:** all risk identification exercises described in the 'Components of sound risk management' section apply to the non-trading market risk management context (such as the Risk Scan, the NAPP and the collection of risk signals). Within the Framework, deep dives (in-depth analyses) are performed to identify specific risks related to the market (non-trading) activities and their materiality. Additionally, the key risk drivers for ALM risk for KBC are

determined and updated annually and regulatory developments are monitored on a continuous basis.

- **Risk measurements:** a common rulebook, which supplements the framework for technical aspects, and a shared group measurement tool ensure that these risks are measured consistently throughout the group through, among others:
  - Basis Point Value (BPV) for interest rate risk;
  - gap analysis for interest rate risk, related to repricing mismatches between assets and liabilities and inflation risk;
  - economic sensitivities for currency risk, equity price risk and real estate price risk.
 Measures are complemented by stress tests, covering back testing of prepayments, net interest income results under various scenarios, or the impact on regulatory capital stemming from interest, spread or equity risk residing within the banking books.
- **Setting and cascading risk appetite:** we pursue a medium risk appetite for non-trading market risk. Limits cover all material market risks resulting from the ALM activities, being interest rate risk, equity risk, real estate risk and foreign exchange risk.
- **Risk analysis, reporting, response and follow-up:** besides regulatory reporting, structural reporting to the GALCO is performed. The reporting process includes a sign-off process to ensure data and processing accuracy.

Market risk in the non-trading activities consists of different risk sub-types. These are outlined below, including more details and figures.

## Interest rate risk and gap risk

We manage the interest rate risk positions separately for the banking and insurance activities.

**Impact of a parallel 10-basis-point increase in the swap<sup>1</sup> curve for the KBC group, impact on value<sup>2</sup> (in millions of EUR)**

	<b>2024</b>	<b>2023</b>
Banking	-55	-45
Insurance	20	11
<b>Total</b>	<b>-35</b>	<b>-33</b>

1 In accordance with market standards, sensitivity figures are based on a risk-free curve (swap curve).

2 Full market value, regardless of accounting classification or impairment rules.

For the banking activities, two other methodologies to measure interest rate sensitivity, which are comparable across institutions, are the outlier stress test (SOT) on Economic Value of Equity (EVE) and the outlier stress test (SOT) on Net Interest Income (NII), both calculated according to the guidelines of the European Banking Authority.

For the SOT on EVE, six different scenarios are applied to the banking books (material currencies) every quarter. These scenarios comprise material parallel shifts up and down, steepening or flattening of the swap curves or shifts in the short-term rates only. The worst-case scenario impact (the most negative impact on the economic value of equity) is set off against tier-1 capital. For the banking book, the SOT EVE came to -5.20% of tier-1 capital at year-end 2024. This is well below the -15% threshold, which is monitored by the European Central Bank and indicates that the overall interest rate sensitivity of KBC's balance sheet is limited.

The SOT EVE is complemented by the SOT NII, which measures the impact of two scenarios (parallel up and down) on NII, assuming a constant balance sheet. The impact of the worst-case scenario on NII is also set off against tier-1 capital. According to this measure, the interest rate sensitivity of KBC is limited too: it came to -1.55% at year-end 2024, compared to the 5% outlier threshold used by the supervisory authority.

The main technique used to measure interest rate risks is the 10 Basis Point Value (BPV) method, which measures the extent to which the value of the portfolio would change if interest rates were to go up by ten basis points across the entire swap curve (negative figures indicate a decrease in the value of the portfolio).

We also use other techniques to measure potential imbalances in terms of our interest rate position, such as gap analysis, the duration approach, scenario analysis and stress testing. Information regarding the Gap table, detailing mismatches between assets and liabilities by time bucket, is provided in the Risk Report.

Concerning the group's insurance activities, the fixed-income investments for the Non-life reserves are invested with the aim of matching the projected pay-out patterns for claims, based on extensive actuarial analysis.

The non-unit-linked Life activities (class 21) combine a guaranteed interest rate with a discretionary participation feature (DPF) fixed by the insurer. The main risks to which the insurer is exposed as a result of such activities are a low-interest-rate risk (the risk that return on investments will drop below the guaranteed level) and the risk that the investment return will not be sufficient to give clients a competitive profit-sharing rate. The risk of low interest rates is managed via a cashflow-matching policy, which is applied to that portion of the Life insurance portfolios covered by fixed-income securities. Unit-linked Life insurance investments (class 23) are not dealt with here, since this activity does not entail any market risk for KBC.

Expected cashflows (not discounted), Life insurance activities (in millions of EUR)	0-1 year	1-2 years	2-3 years	3-4 years	4-5 years	>5 years	Total
31-12-2024							
Fixed-income assets backing liabilities, guaranteed component	1 629	942	924	1 072	895	8 507	13 969
Equity	-	-	-	-	-	-	964
Property	-	-	-	-	-	-	286
Other (no maturity)	-	-	-	-	-	-	182
Liabilities, guaranteed component	1 120	941	969	722	714	9 945	14 410
Difference in time-sensitive expected cashflows	509	1	-45	350	181	-1 438	-422
Mean duration of assets							5.67 years
Mean duration of liabilities							7.35 years
31-12-2023							
Fixed-income assets backing liabilities, guaranteed component	1 787	741	932	787	1 044	8 225	13 516
Equity	-	-	-	-	-	-	937
Property	-	-	-	-	-	-	108
Other (no maturity)	-	-	-	-	-	-	299
Liabilities, guaranteed component	1 595	1 201	807	882	834	9 474	14 793
Difference in time-sensitive expected cashflows	192	-460	125	-95	210	-1 250	-1 278
Mean duration of assets							6.72 years
Mean duration of liabilities							7.92 years

As mentioned above, the main interest rate risk for the insurer is the risk of low rates for a longer period. We adopt a liability-driven ALM approach focused on mitigating the interest rate risk in accordance with KBC's risk appetite. For

the remaining interest rate risk, we adhere to a policy that takes into account the possible negative consequences of a sustained decline in interest rates, and have built up adequate supplementary reserves.

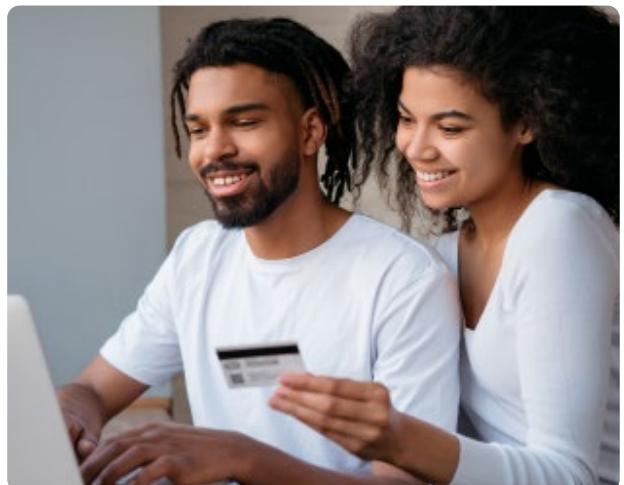

#### Breakdown of the reserves for non-unit-linked Life insurance by guaranteed interest rate, insurance activities

	31-12-2024	31-12-2023
5.00% and higher	3%	3%

More than 2.50% up to and including 3.00%	4%	3%
2.50% and lower	74%	73%
0.00%	2%	2%
Total	100%	100%

## Credit spread risk

We purchase bonds with a view to acquiring interest income. Their selection is largely conservative and based on criteria such as credit risk rating, risk/return measures and liquidity characteristics.

We manage the credit spread risk for, *inter alia*, the sovereign bond portfolio by monitoring the extent to which the value of the sovereign bonds would change if credit spreads were to go up by 100 basis points across the entire curve. In addition to the sovereign portfolio, KBC holds a non-sovereign bond portfolio (banks, corporations, supranational bodies). More details regarding the bond portfolio components can be found in the Risk Report.

**Exposure to bonds at year-end 2024, KBC Group, carrying value (in millions of EUR) AUDITED**

	<b>At amortised cost</b>	<b>At fair value through other comprehensive income (FVOCI)</b>	<b>Held for trading</b>	<b>Total</b>	<b>For comparison purposes: total at year-end 2023</b>	<b>Economic impact of +100 basis points<sup>1</sup></b>
Sovereign	41 955	18 165	3 360	63 480	59 509	-2 943
Of which <sup>2</sup> :						
Czech Republic	11 236	1 977	1 755	14 968	15 611	-708

Non-sovereign <sup>3</sup>	8 121	4 374	1 661	14 225	11 908	-388

1 Theoretical economic impact in fair value terms of a parallel 100-basis-point upward shift in the spread over the entire maturity structure. Only a portion of this impact is reflected in profit or loss and/or equity. Sensitivity figures relate to non-trading positions in sovereign bonds for the banking and insurance businesses (impact on trading book exposure was quite limited and amounted to -57 million euros at year-end 2024).

2 Top 5 largest sovereign portfolios.

3 An immaterial portfolio held at fair value through profit or loss is included in the Non-sovereign total.

## Equity risk

We define equity risk as the risk due to changes in the level or in the volatility of equity prices. KBC holds equity portfolios for several purposes. The main exposure to equity is within our insurance business, where the ALM strategies are based on a risk-return evaluation, taking into account the market risk attached to open equity positions. The vast majority of the equity portfolio is held as an economic hedge for

long-term liabilities of the insurance company. A limited tactical portfolio (99 million euros) aims to contribute to the financial objectives through dividend payouts and capital gains. Smaller equity portfolios are also held by other group entities, where the portfolios are of a strategic nature, such as participations in relation to the execution of KBC's business model. The sectoral repartition of the portfolio is included in the Risk Report.

<b>Equity portfolio of the KBC group</b>	<b>Banking activities</b>			<b>Insurance activities</b>		<b>Group</b>	
	<b>31-12-2024</b>	<b>31-12-2023</b>	<b>31-12-2024</b>	<b>31-12-2023</b>	<b>31-12-2024</b>	<b>31-12-2023</b>	
In billions of EUR*	0.24	0.23	1.42	1.39	1.66	1.63	
of which unlisted	0.23	0.22	0.24	0.18	0.47	0.4	

\* The main reason for the difference with 'Equity instruments' in Note 4.1 of the 'Consolidated financial statements' section is that shares in the trading book are excluded above, but included in the table in Note 4.1.

## Impact of a 25% drop in equity prices, impact on value (in millions of EUR)

Insurance activities	-1	2	339	212
Total	-1	2	361	231

## Real estate risk

We define real estate risk as the risk due to changes in the level or in the volatility of real estate prices. Real estate that is exclusively used by KBC and its subsidiaries for their own activities are excluded here. The group's real estate businesses hold a limited real estate investment portfolio.

KBC Insurance also holds a diversified real estate portfolio, as an investment for Non-life reserves and long-term Life activities. The real estate exposure is viewed as a long-term hedge against inflation risks and as a way of optimising the risk/return profile of these portfolios.

### Impact of a 25% drop in real estate prices, impact on value (in millions of EUR)

	2024	2023
Bank portfolios	-116	-94
Insurance portfolios	-120	-107
Total	-235	-201

## Inflation risk

We define inflation risk as the risk due to changes in the level or in the volatility of inflation rates. Inflation can impact a financial company in many ways, for instance via changes in interest rates or operational costs. Inflation in general therefore is not easily quantifiable as a market risk concept. However, certain financial products or instruments have a direct link with inflation and their value is directly impacted by a change in market expectations. KBC Bank uses inflation-linked bonds as an opportunity to diversify its asset portfolio. At KBC Insurance, inflation risk relates specifically to workmen's compensation insurance, where, particularly in the case of permanent or long-term disabilities, an annuity benefit is paid to the insured person (with the annuity being linked to inflation by law). KBC Insurance partly mitigates the

risks by investing in inflation-linked bonds and complements its inflation hedging programme by investing in real estate and shares, as these assets are traditionally correlated with inflation and do not have a maturity date.

The banking business holds a portfolio of inflation-linked bonds with a sensitivity to inflation (BPI) of 5.6 million euros (a 0.10% move in inflation expectations) at the end of 2024. For the insurance activities the BPI of liabilities was calculated at -4.9 million euros (increasing the liabilities), against which inflation-linked bonds are held with a 4.2-million-euro BPI, supplemented with a 33-million-euro real estate portfolio. The sensitivity of liabilities to inflation is only known with a quarter's delay. Therefore, the insurance figures in this section are based on the third quarter of 2024.

## Foreign exchange risk

We define foreign exchange risk as the risk due to changes in the level or in the volatility of currency exchange rates. We pursue a prudent policy as regards our non-trading currency exposure. Material foreign exchange exposure in the ALM books of banking entities with a trading book is transferred via internal deals to the trading book, where it is managed within the allocated trading limits. The foreign exchange

exposure of banking entities without a trading book and of insurance and other entities has to be hedged, if material. However, non-euro-denominated equity holdings in the insurance portfolio are not hedged, as foreign exchange volatility is considered part of the investment return.

KBC focuses on stabilising the common equity ratio against foreign exchange fluctuations.

### Impact of a 10% decrease in currency value\*

(in millions of EUR)

	Banking		Insurance	
	31-12-2024	31-12-2023	31-12-2024	31-12-2023
CZK	-217	-209	-32	-31
HUF	-74	-85	-10	-9
BGN	-100	-93	-25	-22
USD	-3	6	-59	-52

\* Exposure for currencies where the impact exceeds 10 million euros in Banking or Insurance.

## Hedge accounting

Assets and liabilities management uses derivatives to mitigate interest rate and foreign exchange risks. The aim of hedge accounting is to reduce the volatility in P&L resulting from the use of these derivatives.

KBC decided not to apply hedge accounting to credit and equity risks. When the necessary criteria are met, it is applied to remove the accounting mismatch between the hedging instrument and the hedged item. For more information about hedge accounting, please see 'Notes on the accounting policies' in the 'Consolidated financial statements' section.

### Hedging interest rate risks

Hedging derivatives are used to mitigate an interest rate risk that arises from a difference in the interest rate profile of assets and their funding liabilities. The hedge accounting status of a hedge can be associated with either the asset or the liability item.

Interest rate derivatives can be designated as:

- Hedges of the fair value of recognised assets or liabilities. Changes in the fair value of derivatives that are designated and qualify as fair value hedges are recorded in profit or loss, together with any changes in the fair value of the hedged asset or liability that are attributable to the hedged risk. The gain or loss relating to the ineffective portion is also recognised in profit or loss.
- Hedges of the cashflow of recognised assets and liabilities which are either certain or highly probable forecasted transactions. The effective portion of changes in the fair value of derivatives that are designated and qualify as cashflow hedges is recognised in the cashflow hedge reserve within equity. The gain or loss relating to the ineffective portion is recognised directly in profit or loss.

KBC uses macro hedge accounting strategies for homogeneous portfolios of smaller items, where the frequency of occurrence or the relatively small size of the average operation renders the one-to-one relationship sub-optimal. This is the case for *inter alia* mortgages, loans to SMEs or customer deposits. Macro hedge strategies may be dynamic and undergo frequent changes based on balancing the portfolio ('open portfolio hedge'), among other things.

The micro hedge designation is used when large individual assets or liabilities are hedged. Typical assets are large corporate loans and bond acquisitions for which only the credit spread profile is relevant. Liabilities can include KBC's own issues. Micro hedges are either fair-value or cashflow based.

### Hedging foreign exchange risks

KBC has strategic investments denominated in non-euro currencies. The net asset value of significant participations is partly funded in the local currency by deposits and foreign exchange derivatives, to ensure stability of the common equity ratio. By using hedges of net investments in foreign operations, the foreign exchange component is reported in equity until realisation (unwinding of funding due to liquidation, dividend payments or other decreases in net asset value).

KBC also has a limited portfolio of foreign-currency-denominated bonds that are funded through euro proceeds. These bonds are hedged by cross-currency interest rate swaps to create a synthetic EUR fixed-rate interest income. Cashflow hedge accounting (micro-hedge) is performed to mitigate foreign exchange volatility.

### Hedge effectiveness

Hedge effectiveness is determined at the inception of the hedge relationship, as well as through periodic prospective and retrospective effectiveness assessments, to ensure that a relevant relationship between the hedged item and the hedging instrument exists and remains valid.

#### Effectiveness testing

For interest rates, several prospective and retrospective tests are performed to ensure the relationship between the hedged item and the hedging instrument qualifies for the hedge accounting strategy.

Prospective tests are mostly based either on a sensitivity analysis (verifying if the basis point value of the hedged portfolio relative to the hedging instrument stays within the 80–125% interval) or volume tests (if the principal amount of hedge-eligible items exceeds the notional volume of hedging instruments expected to be repriced or repaid in each specified time bucket).

For macro cashflow hedges, extensive forward-looking analyses assess the sufficient likelihood that the future volume of hedged items will largely cover the volume of hedging instruments. A hedge ratio – measuring the proportion of a portfolio that is hedged by derivatives – is calculated for each hedging strategy.

The retrospective effectiveness test of the hedge relationship is periodically carried out by comparing the change in fair value of the portfolio of hedging instruments relative to the change in fair value of the hedged eligible items imputable to the hedged risk over a given period (the ratio of fair value changes remains within the 80–125% interval).

For foreign exchange hedging, effectiveness is ensured by adjusting the sum of the nominal amount of the funding deals and foreign exchange derivatives to the targeted hedge amount of the strategic participations. For foreign-currency-denominated bonds swapped into euro, the start date, maturity date and coupon dates are also matched.

#### Sources of hedge ineffectiveness

- Ineffectiveness for interest rate swaps may occur due to:
- differences in relevant terms between the hedged item and the hedging instrument (it can include discrepancies in interest curves and in periodicity);
  - a reduction in volume of the hedged item that would fall under the volume of hedging instruments for any time bucket;
  - the credit value adjustment on the interest rate swap not being matched by the loan. However, hedging swaps are fully collateralised or traded through clearing houses and the credit value adjustment is limited.

Regarding the hedge of the net investment in foreign currency, the interest rate component from the hedging instruments can be a source of inefficiency. The counterparty risk on the hedging instrument, even if collateralised, can also be a source of inefficiency.

#### Discontinuation of hedge accounting

Hedge accounting strategies failing the effectiveness tests are discontinued. A de-designated hedging instrument can be re-designated in a new hedge relationship. Effective hedge accounting strategies may also be discontinued for technical or strategic reasons. Any impact on profit and loss arising from hedge ineffectiveness and discontinuation is reported to the GALCO.

## Capital sensitivity to market movements

Available capital can be impacted by changes in the value of balance sheet items (e.g., sovereign and corporate bonds and equity) booked at fair value through other comprehensive income or fair value through profit or loss. This impact can be negative when the market is stressed,

which can be triggered by a number of market parameters, including swap rates or bond spreads that increase or equity prices that fall. At KBC, we use this capital sensitivity as a common denominator to measure the vulnerability of the banking book to different market risk shocks.

#### CET1 sensitivity to main market drivers (under Danish compromise), KBC group (as % points of CET1 ratio), IFRS impact caused by:

	31-12-2024	31-12-2023
+100-basis-point parallel shift in interest rates	-0.1%	-0.1%
+100-basis-point parallel shift in spread	-0.4%	-0.2%
-25% in equity prices	-0.2%	-0.1%

The table shows that the sensitivity of capital to market movements is limited. The sensitivity to spread volatility has increased over the past year as KBC has opted to increase the part of its bond portfolio that is booked at fair value through other comprehensive income. However, the majority of the portfolio is deemed to be held to maturity and is therefore booked at amortised cost. Those positions do not

impact capital unless they are liquidated before maturity. Note that KBC holds material amounts of liquid assets (see the liquidity section) to absorb unexpected funding outflows. If these are not sufficient, KBC can still enter into repo agreements to access liquidity rather than having to realise losses on the bonds.

## Liquidity risk

Liquidity risk is the risk that an organisation will be unable to meet its liabilities and obligations as they come due, without incurring higher-than-expected costs.

### Managing liquidity risk AUDITED

In the area of liquidity risk, the ExCo is supported by the Group Asset and Liability Committee (GALCO), which provides assistance in the area of (integrated) balance sheet management at group level, including liquidity and funding. The governance, rules and procedures and how asset and liability risk management is performed throughout the group are outlined in the Liquidity Risk Management Framework. Its implementation is monitored by the Liquidity Risk Competence Centre of Group Risk. Within the risk function, the ALM & Liquidity Risk Council aims to establish, facilitate, promote and support the solid and efficient integration of all tasks assigned to the local and group risk departments.

### The building blocks for managing liquidity risk AUDITED

- **Risk identification:** all risk identification exercises described in the 'Components of sound risk management' section apply to the liquidity risk management context (such as the Risk Scan, the NAPP and the collection of risk signals).
- **Risk measurement:** identified liquidity risks are measured by means of both regulatory metrics such as the Liquidity Coverage Ratio (158% in 2024) and the Net Stable Funding Ratio (139%), and internal metrics on, for example, the funding mix and concentration and the composition of the liquid asset buffer. In the maturity analysis table below, KBC's structural liquidity risk is illustrated by grouping the assets and liabilities according to the remaining term to maturity (using the contractual maturity date). The difference between the cash inflows and outflows is referred to as the 'net funding gap'.
- **Setting and cascading risk appetite:** the GALCO monitors the development of the liquidity risk profile in relation to the limits. KBC's low risk profile for liquidity risk is illustrated by the fact that KBC is well above the thresholds for regulatory and internal liquidity measures. The GALCO decides on and periodically reviews a framework of limits, early warning levels and policies on liquidity risk activities that is consistent with the group's risk appetite.
- **Risk analysis, reporting, response and follow-up:** to mitigate day-to-day and intraday liquidity risk, group-wide trends in funding liquidity and funding needs are monitored continuously by the Group Treasury and Risk function. A Liquidity Contingency Plan drafted by the Group Treasury function is in place to address possible liquidity crisis situations and is tested at least annually.
- **Stress testing:** liquidity stress tests assess KBC's liquidity contingency risk by measuring how the liquidity buffer of the group's bank and insurance entities changes under

extreme stress scenarios. This buffer is based on assumptions regarding liquidity outflows and liquidity inflows resulting from actions to increase liquidity. The liquidity buffer has to be sufficient to cover liquidity needs over (i) a period that is required to restore market confidence in the group following a KBC-specific event, (ii) a period that is required for markets to stabilise after a general market event and (iii) a combined scenario, which takes a KBC-specific event and a general market event into account. This information is fed into the Liquidity Contingency Plan.

Moreover, KBC has an Internal Liquidity Adequacy Assessment Process (ILAAP) in place to ensure it has robust strategies, policies, processes and systems for identifying, measuring, managing and monitoring liquidity risk and funding positions over all appropriate time horizons, in order to maintain adequate levels of liquidity buffers.

### Maturity analysis AUDITED

The table below shows the maturity analysis of the total inflows and outflows. Note that the structural liquidity gap shown in the table does not include the concept of a Liquid Asset Buffer (i.e. the fact that KBC can monetise its liquid bonds at all times via repo or pledging to central banks). Rather, in this table, cash-generating capacity from bonds is only visible at final maturity of the bond. As a result, the net funding gaps shown in the first buckets in the table are a clear overestimation of the risk as in practice KBC would monetise its Liquid Asset Buffer (95 billion euros at year-end 2024 (101 billion euros, 12-month average over 2024), of which 53 billion euros in unencumbered central bank eligible assets and the remainder in cash and withdrawable central bank receivables) to address these net outflows.

At year-end 2024, KBC had 53 billion euros' worth of unencumbered central bank eligible assets, 44 billion euros of which in the form of liquid government bonds (83%). The remaining available liquid assets were mainly covered bonds (14%). Most of the liquid assets are expressed in our home market currencies. The funding from non-wholesale markets was accounted for by stable funding from core customer segments in our core markets.

Liquidity risk (excluding intercompany deals)* (in billions of EUR)	<= 1 month	1-3 months	3-12 months	1-5 years	>5 years	On demand	Not defined	Total
<b>31-12-2024</b>

Undrawn commitments	-	-	-	-	-	-	-48	-48
Financial guarantees	-	-	-	-	-	-	-11	-11
Net funding gap (incl. undrawn commitments)	-45	-18	7	74	108	-145	-41	-59

\* Cashflows include interest rate flows consistent with internal and regulatory liquidity reporting. Inflows/outflows that arise from margin calls posted/received for MtM positions in derivatives are reported in the 'Not defined' bucket. 'Professional funding' includes all deposits from credit institutions and investment firms, as well as all repos. Instruments are classified on the basis of their first callable date. Some instruments are reported at fair value (on a discounted basis), whereas others are reported on an undiscounted basis (in order to reconcile them with Note 4.1 of the 'Consolidated financial statements' section). Due to the uncertain nature of the maturity profile of undrawn commitments and financial guarantees, these instruments are reported in the 'Not defined' bucket. The 'Other' category under 'Total outflows' contains own equity, short positions, provisions for risks and charges, tax liabilities and other liabilities.

## Funding information

We have a strong retail/mid-cap deposit base in our core markets, resulting in a stable funding mix. A significant portion of the funding is attracted from core customer segments and markets.

Funding mix	Information	31-12-2024	31-12-2023
Funding from customers <sup>1</sup>	Demand deposits, term deposits, savings deposits, other deposits, savings certificates and debt issues placed in the network	75%	79%
Debt issues placed with institutional investors	Including covered bonds, tier-2 issues, KBC Group NV senior debt	8%	9%
Net unsecured interbank funding	Including TLTRO	3%	4%
Net secured funding <sup>2</sup>	Repo financing	-0%	-7%
Certificates of deposit	-	5%	6%
Total equity	Including AT1 issues	8%	9%
Total		100%	100%
in billions of EUR		306	276

1 Some 86% of this funding relates to private individuals and SMEs at year-end 2024.

2 Negative on account of KBC carrying out more reverse repo transactions than repo transactions.

## Market risk in trading activities

Market risk relates to changes in the level or in the volatility of prices in financial markets. Market risk in trading activities is the potential negative deviation from the expected value of a financial instrument (or portfolio of such instruments) in the trading book due to changing interest rates, exchange rates, equity or commodity prices, etc.

KBC's strategic objectives in undertaking trading activities are to offer sound and appropriate financial products and solutions to its clients in order to help them manage their risks and access capital, and to engage in certified market-making activities. In addition to the small (long or short) positions that occur during our certified market-making activities, our focus on client-driven, client-facilitation-related business leaves us with some residual market risks, which are necessary to enable us to fulfil our intermediary role towards clients.

Traditionally, the focus of our trading activities is on interest-rate instruments, while activity on the foreign exchange markets and in relation to equity is limited. In order to ensure the tradability of these positions, the following principles apply:

- Trading activity is limited to linear and non-linear interest-rate, foreign-exchange and equity products, as well as to bonds, bond futures and government debt;
- Commodity-related products are only allowed on a back-to-back basis.

These activities are carried out by our dealing rooms in our home countries as well as via a minor presence in the UK and Asia.

### Managing market risk AUDITED

In the area of market risk in the trading activities, the ExCo is supported by the Group Markets Committee (GMC), which advises on risk monitoring and capital usage with respect to trading activities. The governance, rules and procedures on how trading risk management should be performed throughout the group are outlined in the Trading Market Risk Management Framework.

### The building blocks for managing market risk AUDITED

- **Risk identification:** all risk identification exercises described in the 'Components of sound risk management' section apply to the trading market risk management context (such as the Risk Scan, the NAPP and the collection of risk signals). Furthermore, we analyse the results of value and risk calculations, market developments, ESG risk assessments, industry trends, new modelling insights, changes in regulations, etc.
- **Risk measurement:** we measure trading risk via a number of parameters including nominal positions, concentrations, Basis Point Value (BPV) and other sensitivities and scenario

analysis. However, the primary tool we use for measuring and monitoring market risk exposures in the trading book is the Historical Value-at-Risk (HVaR) method, which gives an estimate of the amount of economic value that might be lost on a given portfolio due to market risk over a defined holding period, with a given confidence level.

- **Setting and cascading risk appetite:** the risk appetite for market risk in trading activities is set at low and is overseen by the GMC via a risk limit framework consisting of a hierarchy of limits and early warning indicators. These are defined down to trading desk level and, in addition to HVaR, include a series of concentration limits, basis-point-value limits and (stress) scenario limits.
- **Risk analysis, reporting, response and follow-up:** in addition to the more proactive elements described under 'Risk identification', this involves compiling the necessary external and internal reports, issuing advice on business proposals, and monitoring and advising on the risks attached to the positions. The GMC, which meets every month, receives an extensive Core Report as well as periodic and ad hoc memos and reports. The GMC also receives a dashboard halfway between the monthly meetings whose frequency is increased (up to daily, if needed) depending on market circumstances.
- **Stress testing:** in addition to the risk limit framework, we conduct extensive stress tests on our positions on a weekly basis. The stress tests are discussed at GMC meetings to enable the members to gain an insight into potential weaknesses in the positions held by the group.

### Market risk profile AUDITED

Our Approved Internal Model is used to calculate the vast majority of market risk regulatory capital. Regulatory capital for business lines not included in the Approved Internal Model is measured according to the Standardised approach. The tables below show the Management HVaR (using our Approved Internal Model and a 99% confidence interval, one-day holding period) for the residual trading positions at all the dealing rooms of KBC that can be modelled by HVaR and the breakdown per risk type.

<b>Market risk (Management HVaR) (in millions of EUR)</b>	<b>2024</b>	<b>2023</b>
Average for 1Q	7	7
Average for 2Q	5	6
Average for 3Q	5	6
Average for 4Q	4	7
As at 31 December	4	8
Maximum in year	10	10
Minimum in year	3	4

<b>Breakdown by risk factor of trading HVaR for the KBC group (Management HVaR; in millions of EUR)</b>	<b>Average for 2024</b>	<b>Average for 2023</b>
Interest rate risk	4.9	6.3
FX risk	0.5	0.9
Equity risk	1.9	2.1
Diversification effect	-2.0	-2.8
Total HVaR	5.2	6.5

## Technical insurance risk AUDITED

Technical insurance risk is the risk of loss due to (re)insurance liabilities or of adverse developments in the value of (re)insurance liabilities related to Non-life, Life and Health (re)insurance contracts, stemming from uncertainty about the frequency and severity of losses.

Specific information on the insurance activities is provided in Notes 3.6 and 5.6 of the 'Consolidated financial statements' section.

### Managing technical insurance risk

In the area of technical insurance risk, the ExCo is supported by the Group Insurance Committee (GIC), which monitors risks and capital regarding the (re)insurance activities. The governance, rules and procedures on how technical insurance risk management should be performed throughout the group are outlined in the Technical Insurance Risk Management Framework. Its implementation is monitored by Group Risk and its Technical Insurance Risk Competence Centre. The Competence Centre is responsible for providing support for local implementation and for the functional direction of the insurance risk management processes of the insurance subsidiaries. The actuarial function helps to ensure continuous compliance with the requirements regarding the calculation of technical provisions and the risks arising from this calculation and assesses the reinsurance policy and underwriting risk.

### The building blocks for managing technical insurance risk

- **Risk identification:** all risk identification exercises described in the 'Components of sound risk management' section apply to the technical insurance risk management context (such as the Risk Scan, the NAPP and the collection of risk signals). Furthermore, special attention is paid to the

adequacy of the technical provisions. Part of the risk identification process consists of reliably classifying all insurance risks that may be triggered by (re)insurance contracts. Under the Solvency II directive, insurance activities are split up into three main categories, namely Life, Non-life and Health, each subdivided into catastrophe and non-catastrophe risks.

- **Risk measurement:** technical insurance risk is measured by means of both regulatory measures, such as Solvency Capital Requirement (SCR) and Best Estimate valuation of insurance liabilities, and internal measures on, for example, economic profitability of insurance portfolios and Non-life capital requirements based on internal stochastic models. These measures of insurance risk are used consistently throughout the group.
- **Setting and cascading risk appetite:** the risk appetite for technical insurance risk is set at low and is overseen by the GIC, where the defined limits are reviewed and reported. The insurance risk limits are determined and set at group level and further cascaded to the local entities. The necessary compliance checks are conducted.
- **Risk analysis, reporting, response and follow-up:** regular reporting and follow-up of the risk measurements is presented in the Insurance Integrated Risk Report, which is submitted to the Group Insurance Committee on a quarterly basis. In addition, relevant risk signals are reported on a regular basis as part of the regular (Insurance) Integrated Risk Report.
- **Stress testing:** internal and externally driven (regulatory) stress tests and sensitivity analyses are performed and the

outcome of these tests is reported in the annual Own Risk and Solvency Assessment report (ORSA) and other reports (such as the Regular Supervisory Report (RSR) and the Insurance Integrated Risk Report).

## Reinsurance

The insurance portfolios are protected against the impact of large claims or the accumulation of losses by limits per policy, diversification of the portfolio across product lines and geographical regions, and reinsurance.

Reinsurance programmes can be divided into three main groups, i.e. property insurance, liability insurance and personal insurance. Most of the reinsurance contracts are concluded on a non-proportional basis, which provides specific cover against the impact of large loss events.

The independent insurance risk function is responsible for:

- advising on the restructuring of the reinsurance programme during the annual negotiations;
- informing management on a quarterly basis of the top natural catastrophe claims and how these were managed and mitigated;
- conducting ad hoc analyses/deep dives following risk signals or management requests to analyse possible trends in catastrophe events.

## Actuarial function

The Solvency II regulatory framework requires an actuarial function to be installed as one of the independent control functions (in addition to the risk management, compliance and internal audit functions) at the level of each insurance entity and at insurance group level. An actuarial function holder is appointed to take charge of the actuarial function's

activities. Basically, the task of such a function is to ensure that the company's Board of Directors or Supervisory Board is fully informed of technical actuarial topics in an independent manner.

The main tasks of the actuarial function are to:

- ensure the appropriateness of the methodologies and underlying models used, as well as the assumptions made, in the calculation of technical provisions;
- assess the sufficiency and quality of the data used in the calculation of technical provisions;
- compare best estimates against experience;
- inform the administrative, management or supervisory body of the reliability and adequacy of the calculation of technical provisions;
- express an opinion on the overall underwriting policy;
- express an opinion on the adequacy of reinsurance arrangements; and
- contribute to the effective implementation of the risk management, in particular with respect to the risk modelling underlying the calculation of the capital requirements.

## Sensitivity to parameters underlying the IFRS 17 valuation of insurance liabilities

The table gives an overview of the sensitivity of IFRS 17 insurance liabilities to a change at the reporting date of a selection of parameters which are used in the calculation of the IFRS 17 fulfilment cashflows. Liabilities on the balance sheet which are in scope of IFRS 9 reporting, mainly unit-linked liabilities, are not included in the sensitivity reporting below. The impact is reported before reinsurance, given the small impact which the reinsurance has on the sensitivities.

Sensitivity (in millions of EUR)	31-12-2024				31-12-2023			
	Discounted fulfilment cashflows	Contractual Service Margin	Result before tax	Equity: OCI before tax	Discounted fulfilment cashflows	Contractual Service Margin	Result before tax	Equity: OCI before tax
Life insurance: balance	11 782	2 143	-	-	11 745	2 117	-	-
<i>Impact of:</i>								
Mortality rates: +1%	6	-4	-0	-1	5	-3	0	-2
Mortality rates: -1%	-6	5	-0	1	-5	3	0	2
Morbidity rates: +1%	6	-6	-1	1	6	-6	-0	1
Morbidity rates: -1%	-6	7	0	-1	-6	6	0	-1
Expenses: +5%	55	-57	-7	9	49	-54	-3	9
Expenses: -5%	-55	57	6	-9	-49	53	3	-9
Lapse rate: +10%	58	5	3	-66	55	50	7	-112
Lapse rate: -10%	-60	-5	-4	69	-58	-52	-6	116
Non-life insurance: balance	2 444	-	-	-	2 238	-	-	-
<i>Impact of:</i>								
Unpaid claims & expenses: +5%	122	-	-125	3	111	-	-116	5
Unpaid claims & expenses: -5%	-122	-	125	-3	-111	-	116	-5

## Comparison of IFRS 17 carrying amount and amounts payable for Life insurance contracts

In this table the amounts 'payable on demand' for Life insurance contracts measured under IFRS 17 are set off against the carrying amount of those contracts. The carrying amount is defined as the sum of the present value of future cashflows of those contracts increased by the risk adjustment and the contractual service margin. 'Amounts payable on demand' is the amount to which policyholders

are contractually entitled if they were to surrender their contracts on the reporting date, before deduction of the surrender fees.

Life insurance (in millions of EUR)	Amounts payable on demand	Carrying amount of insurance liabilities	31-12-2024		31-12-2023	
			Difference	Amounts payable on demand	Carrying amount of insurance liabilities	Difference
Unit-linked (IFRS 17)	808	842	34	788	811	24
Non-unit-linked	11 866	12 099	232	12 825	12 804	-21
Hybrid contracts	1 165	985	-180	233	246	13
Total	13 839	13 925	87	13 846	13 862	16

## Sensitivity of the IFRS 17 valuation of insurance liabilities to a change in the discount curve

The table shows the sensitivity to a 30-bp parallel shift up and down of the discount curve.

Sensitivity (in millions of EUR)	31-12-2024				31-12-2023			
	Fulfilment cashflows	Contractual Service Margin	Result before tax	Equity: OCI before tax	Fulfilment cashflows	Contractual Service Margin	Result before tax	Equity: OCI before tax
<b>Life insurance</b>								
Assets: balance	14 729	-	-	-	14 466	-	-	-

Impact of discount rate -0.30%	13	0	0	13	12	0	0	12
Insurance liabilities: balance	2 444	-	-	-	2 238	-	-	-
Impact of discount rate +0.30%	-36	0	0	35	-31	0	0	31
Impact of discount rate -0.30%	38	0	-0	-37	31	0	-0	-31
Combined effect	-	-	-	-	-	-	-	-
Impact of discount rate +0.30%	23	0	0	23	19	0	0	19
Impact of discount rate -0.30%	-25	0	-0	-24	-19	0	-0	-19

## Non-life claims development

The table below provides a disclosure about claims development (the Non-life Building Block Approach is excluded because of immateriality). For each accident year, this table shows a yearly follow-up of the total claim charge throughout the years following the year in which the claims occurred. The estimate of the future cashflows is obtained by subtracting for each accident year the amounts that have already been paid from the total estimated claims charge of that year. As IFRS 17-compliant data is available from 2022 on, the three last diagonals show the claims charge calculated according to IFRS 17 principles. The figures in italics were reported under IFRS 4 and are added for reference.

Non-life claims development, KBC insurance (in millions of EUR)	Accident year											
	<2015	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	Total
Estimates of undiscounted cumulative claims before reinsurance												
At the end of accident year	-	940	1 024	1 000	1 072	1 149	1 018	1 262	1 097	1 091	1 247	-
1 year later	-	796	888	882	939	1 019	897	1 022	1 091	1 234	-	-
2 years later	-	751	825	849	894	989	782	1 020	1 086	-	-	-
3 years later	-	720	811	833	876	895	793	1 028	-	-	-	-
4 years later	-	708	806	816	782	903	779	-	-	-	-	-

## Non-financial risks

### Operational risk

Operational risk is the risk of inadequate or failed internal processes, people and systems or of sudden man-made or natural external events.

#### Managing operational risk

In the area of operational risk, the ExCo is supported by the Group Internal Control Committee (GICC) to strengthen the quality and effectiveness of KBC's internal control system. The governance, rules and procedures on the performance of operational risk management throughout the group are outlined in the Operational Risk Management Framework. The framework is fully aligned with the Basel requirement for Operational Resilience and the EU Digital Operational

Resilience Act (DORA) – Regulation (EU) 2022/2554. Its implementation is coordinated and monitored by the Operational Risk Competence Centre of Group Risk, which consists of risk experts at both group and local level. The Competence Centre cooperates with other expert functions covering the nine operational risk sub-types: Information Technology, Information Security, Business Continuity, Process, Third-Party and Outsourcing, Model, Legal, Fraud, and Personal and Physical Security risk.

## The building blocks for managing operational risks

- **Risk identification:** KBC identifies its operational risks based on various sources, such as following up on legislation, using the output of the New and Active Products Process (NAPP), performing risk scans, analysing key risk indicators and performing independent control monitoring activities and root cause analysis of operational incidents, near misses and losses. A structured repository of operational risks and related mitigating controls is in place, with a review process ensuring that the repository remains in line with new or emerging operational risk sub-types. Risk self-assessments on the operational business lines are performed by the first Line of Defence with the aim of identifying additional local risks and possible operational control gaps. Dynamic trigger-based risk assessments are executed based on the continuous screening of both internal and external risk events. On top of that, risk signals are collected by regular proactive scanning of the environment in order to identify external or internal (cyber) trends which could negatively impact our company in a direct or indirect way.
- **Risk measurement:** uniform group metrics and scales are in place to determine individual (inherent and residual) operational risk levels in the business lines and to underpin the risk profile of an entity in a comprehensive and integrated way across operational risk sub-types and across KBC and its entities.  
In addition, KBC closely monitors the maturity of its internal control environment in a data-driven way. This allows us to frequently assess and report on maturity and take action when necessary. Once a year, these insights also serve as input for the regulatory required Internal Control Statement (ICS), which evaluates how well KBC is in control of and manages its operational risks.  
To determine the degree of assurance that a control measure mitigates a particular risk as expected, we measure the 'control effectiveness' via several metrics such as employee phishing campaign click rates, website vulnerability patching speeds and the number of processing errors.
- **Setting and cascading risk appetite:** overall, KBC strives for a low operational risk environment in a business-as-usual situation. However, in case of projects that introduce a large-scale transformation (such as mergers and acquisitions), the level is increased to 'the lower end of medium' whilst maintaining strict boundaries. The operational risk appetite is set at the overarching level as well as at the level of each operational risk sub-type (see below). The current operational risk profile in relation to the operational risk appetite is discussed quarterly as part of the Operational and Compliance Risk Report to the GICC.
- **Risk analysis, reporting, response and follow-up:** operational risk analysis and reporting aim to give a transparent and comprehensive, forward-looking and ex-post view on the development of the risk profile and the

context in which KBC operates. Structural reporting to the GICC (via the Operational and Compliance Risk Report), to the Board, the RCC and the ExCo (via the Integrated Risk Report) takes place on a quarterly basis, and to the Global IT Committee (GITCO) on a monthly basis. The maturity of the internal control environment is reported once a year to the ExCo, the RCC and the Board and to the NBB, the FSMA and the ECB via the annual Internal Control Statement. These are complemented by regular or ad hoc reports that provide additional details on the aforementioned reports.

- **Stress testing:** stress testing in the context of operational risk is done by using scenarios with a potential negative impact on KBC's (financial) position in order to prepare the KBC entities for (extreme) crisis situations. These scenarios describe specific operational risk events ranging from plausible to exceptional or even extreme and/or movements in operational risk loss impacts. Stress testing enables KBC entities, for example, to deal with local cyber crises and handle major incidents. To ensure that Information Security and Information Technology risks are effectively mitigated, a number of challenges are performed throughout the group on a regular basis, such as technical cyber resilience and readiness testing, detailed investigations, employee phishing tests, crisis simulations and other incident drills.

## Dedicated focus to manage our major operational risks:

### *Information risk management*

Information risk management encompasses the risks of information security and information technology, driven by an ever changing cyber threat landscape. Information security risk is one of the most material risks that financial institutions face today, driven by factors such as geopolitical tensions, organised cybercrime, technological growth and innovation (e.g., use of AI for phishing, deepfakes, etc.) and internal factors (such as further digitalisation, experiments with emerging technology, and so on). These threats could lead to a loss of integrity, loss of confidentiality and unplanned unavailability, which could impact our data, the availability of our operations and services, KBC's reputation, and so on.

Cyber risks are structurally and continuously managed throughout the group. KBC actively identifies cyber risks by actions such as monitoring the cyber threat landscape, regular ethical hacks, and targeted training and awareness programmes. By combining cyber threat intelligence with insights and findings from these actions, we proactively identify, assess and understand cyber risks that could target our company and stakeholders, enhancing our ability to defend against and respond to cyber threats effectively. More information about how information risk (including cyber risks) is managed can be found in the Sustainability Statement in this report or in the KBC Risk Report.

### *Third-party and outsourcing risk management*

Third-party and outsourcing risk is the risk stemming from problems regarding continuity, integrity and/or quality of the activities outsourced to third parties (whether or not within the group) or performed in collaboration with third parties, or from the equipment or staff made available by third parties. In view of the potential impact on KBC and its clients, it is important to identify, assess, monitor, and control risks related to third-party relationships throughout the entire life cycle of those relationships. Therefore, effective third-party risk management follows the stages of the life cycle for third-party arrangements, which includes due diligence, risk assessment, contracting, onboarding, ongoing monitoring and termination.

Outsourcing risk management is a specific aspect of third-party risk management (TPRM). Regulatory requirements regarding follow-up, measurement and reporting of outsourcing risk have increased over the years (for example, via DORA and the EBA and EIOPA Guidelines on Outsourcing). As contracting external service providers is an essential part of operational processes and intra-group outsourcing is an important aspect of the KBC strategy, the need to focus on outsourcing risk remains a key element of group-wide risk management.

To ensure robust management of its outsourcing processes and risks, KBC has put in place a group-wide outsourcing framework. The framework comprises a group-wide Outsourcing and DORA TPRM policy which sets out the principles and strategy for outsourcing activities and aims to standardise the approach adopted when an activity is considered for outsourcing. It is supported by the Outsourcing & DORA TPRM Process Guidance to ensure a strict and standardised approach throughout the group, applicable to both outsourcing and nearshoring.

Controls are in place to adequately mitigate risks arising from either external or internal outsourcing during the full life cycle of a service provider. Qualitative risk governance of KBC outsourced activities is ensured by regular risk assessments, their frequency being defined by the criticality of the outsourced activity.

### *Model risk management*

KBC's data-driven strategy is underpinned by an expanding set of advanced mathematical, statistical and numerical models to support decision-making, measure and manage risk, manage businesses and streamline processes. AI-based models are also becoming an increasingly common feature across the different business domains (banking, insurance, asset management). As the use of models increases, so does the importance of recognising, understanding and mitigating risks related to the design, implementation or use of models,

in order to protect both KBC and its clients. KBC's model risk management standards establish a framework that allows us to identify, understand and efficiently manage model risk, similar to any other risk type. The scope of this framework covers in particular generative AI models and high-risk AI models, in line with the EU AI Act.

As the use of AI models is an important aspect in KBC's strategy, it is important to ensure that the output of the AI models we use is reliable and aligned with KBC's values and principles. To achieve this, KBC adheres to the Trusted AI Framework.

### *Business continuity management, including crisis management*

To ensure availability of critical services, KBC has a business continuity management (BCM) process in place. This ensures that regular business impact analysis is performed and recovery time objectives are defined and implemented.

The BCM process is a mature process within the group, with a focus on both prevention and response. Crisis prevention focuses on reducing the probability of a crisis, while crisis response focuses on the effective and efficient handling of a crisis should one occur. To enable this, practical scenarios called runbooks are available on how to handle an ongoing crisis. Lessons learned from any (internal or external) incident or crisis are drawn and, when needed, our BCM plans are adapted.

## Compliance risk

Compliance risk is the risk that a judicial, administrative or regulatory sanction is imposed on an institution and/or its employees because of non-compliance with the laws and regulations pertaining to the compliance domains, resulting in loss of reputation and potential financial loss. This loss of reputation can also be the result of non-compliance with the internal policy in this regard and with the institution's own values and codes of conduct in relation to the integrity of its activities.

### Managing compliance risks

As a matter of priority and as a minimum, the scope of activities of the compliance function is to be concentrated on the following areas of integrity: Anti-Money Laundering and Countering the Financing of Terrorism, Tax Fraud Prevention, Investor Protection and Protection of the Policyholder, Data Protection and AI including AI Act Compliance, Business Ethics, Consumer Protection, Governance aspects of CRD IV and V, Solvency II and/or local legislation and Sustainable Finance and Sustainability. Compliance risk is covered by a holistic framework that includes the Compliance Charter, the Integrity Policy, the specific risk appetite and the accompanying Key Risk Indicators, the Group Compliance Rules, the Compliance Monitoring Programme and other reporting. To guarantee the independence of the compliance function, proper governance is in place with an adequate escalation process to the ExCo, the RCC and the Board. The governance of the compliance function is described in more detail in the Compliance Charter and is in line with EBA/EIOPA guidelines on internal governance.

### The building blocks for managing compliance risks

To manage compliance risks, KBC aims to comply with laws and regulations in the compliance domains as determined by KBC's Compliance Charter. The compliance function's role in managing these risks is twofold:

On the one hand, it is particularly dedicated to the identification, assessment and analysis of the risks linked to the compliance domains. Furthermore, it provides advice from an independent viewpoint on the interpretation of laws and regulations pertaining to the domains it covers. This preventive role is put into practice by Group Compliance Rules that define minimum requirements for the entire group, the provision of procedures and instructions, tailored training courses and awareness initiatives, information on new regulatory developments to the governance bodies, support in the implementation of the group strategy, and the implementation of legal and regulatory requirements by the various businesses concerned. Additionally, the compliance function provides advice and independent opinions in the New and Active Products Process (NAPP). Together with the other control functions, the compliance function ensures that, under the

NAPP, the launch of any new products conforms with the many legal and regulatory provisions in place, such as MiFID II, the Insurance Distribution Directive (IDD) and other local and EU Regulations, as well as being in line with KBC's values.

On the other hand – as the second Line of Defence – it carries out risk-based monitoring to ensure the adequacy of the internal control environment. More specifically, monitoring allows it to verify whether legal and regulatory requirements are correctly implemented in the compliance domains. It also aims to ensure the effectiveness and efficiency of the controls performed by the first Line of Defence. Moreover, quality controls are performed by Group Compliance in the main group entities to assure the Board that the compliance risk is properly assessed by the local compliance function.

### Insight into managing some specific compliance domains

Group Compliance (GCPL) has been working on developing the foundations of a strong group-wide compliance function. The main focus points were processes and efficiency, creating a future-proof strategy reflected in the vision and strengthening staffing and the management team. In addition, GCPL has invested in different tools and in the group's role to meet the ECB's expectations. Going forward, the focus will be on further improving the methodology and processes within the compliance function in order to provide the necessary assurance to the Board and the regulator.

GCPL strives towards a mature organisation with data-driven and documented planning which will aid group-wide steering. The goal is to achieve group-wide synergy and scalability at all levels and in all domains, for example by means of risk assessments, regulatory watches, knowledge management, etc. The main goal is a holistic, risk-based and data-driven approach to compliance.

#### *Financial Crime*

A Financial Crime Compliance department was set up to enhance synergies between AML (Anti-Money Laundering), embargoes and other related domains. The prevention of money laundering and terrorist financing, including embargoes, has been a top priority for the compliance function in the past few years and will continue to be prioritised. Efforts are continuously made to adapt the organisation to a constantly changing regulatory

environment, particularly with regard to clients who present an increased risk and for whom additional information is required. As such, the compliance function is also closely following the EU developments at the level of the new AML Authority (AMLA) and regulatory provisions expected. Special emphasis is placed on a preventive risk management approach (for example, embargo circumvention measures).

#### *Data and Consumer Protection and AI*

Conformity with data and consumer protection obligations is a central hallmark of any sustainable and client-centric organisation. In the context of KBC's data-driven strategy, it is crucial to pay attention to all upcoming regulatory developments in the data and consumer protection domains to ensure future-proof, reliable and dependable bank-insurance activities for KBC clients. The compliance function closely follows up on the regulatory developments impacting the data and/or consumer protection domains such as FIDA, PSD3/PSR and the Basic Banking Service. Since 2020, Kate, the personal assistant, has gained maturity and can increasingly facilitate the everyday lives of our clients. The study of the potential use of generative AI models is closely followed to ensure that risks are duly identified, including the new risks deriving from the AI Act. In anticipation of the implementation of the AI Act, KBC has developed its 'Trusted AI Framework', which ensures that the technologies we use operate in a transparent, fair and secure way.

#### *Investor and Policyholder Protection*

Financial markets and insurance legislation are the subject of constant changes and continuous expansion. KBC strives for early preparedness by ensuring that the internal framework (rules, policies, and minimum first- and second-line controls) allows for the frictionless adaptation of business activities. In 2024, this implied a forward-looking approach to translate upcoming requirements into actionable business advice (e.g., Value for Money in insurance, new market structure rules, changes to market abuse provisions). In addition, the compliance function anticipated regulatory expectations in new fields (e.g., crypto-asset legislation). To foster the compliance culture and reduce compliance risk, several initiatives were taken to make Group Compliance Rules

easier to understand, use, and interpret (e.g., methodology changes, e-learning courses, guidelines, standardised texts).

#### *Corporate Governance and Business Ethics*

Corporate governance in credit institutions and insurance undertakings aims to ensure that they operate in a safe and sound manner, manage risks effectively, and make decisions that are in the best interests of their stakeholders. Strong corporate governance practices strengthen KBC in dealing with, and controlling, compliance risk. As in previous years, Compliance therefore advises on and monitors compliance with governance aspects of CRD IV and V and Solvency II such as outsourcing, the functioning and composition of committees, Fit & Proper, the incompatibility of mandates, follow-up of complaints handling, conflicts of interest, sound remuneration, etc. In 2024, particular attention was paid to efficiency gains (e.g., in the process of reporting complaints handling to the Board) and the follow-up of new and/or upcoming regulatory requirements impacting the aforementioned governance areas (e.g., CRD VI, DORA, etc.). Additionally, governance of the compliance function, as an independent control function, is of essential importance when dealing with compliance risk. Continuous efforts are made to strengthen compliance governance and enhance group-wide steering, alignment and cooperation with local entities. Corporate governance principles also go hand in hand with the concept of responsible behaviour, which is one of the three cornerstones of KBC's sustainability strategy. Together with business ethics, responsible behaviour is essential in ensuring that KBC maintains one of its most valuable assets: trust. Risks linked to irresponsible and/or unethical behaviour are often labelled as 'conduct risk'. As in previous years, KBC continues to limit and mitigate these risks with targeted training and awareness programmes, codes of conduct and specific policies on conflicts of interest, anti-corruption, gifts and entertainment, protection of whistleblowers, etc., and with recurrent risk assessments and quality controls, which ensure sound implementation of these policies. Particular attention in the Business Ethics domain is also paid to the risks linked to the increased use of AI solutions.

## Reputational risk

Reputational risk is the risk arising from the loss of confidence by, or negative perception on the part of, stakeholders (such as KBC employees and representatives, clients and non-clients, shareholders, investors, financial analysts, rating agencies, the local community in which it operates, etc.) – be it accurate or not – that can adversely affect a company's ability to maintain existing, or establish new, business and client relationships, and to have continued access to sources of funding.

Reputation is a valuable asset in business and this certainly applies to the financial services industry, which thrives to a large extent on trust. Reputational risk is mostly a secondary

risk since it is usually connected to – and materialises together with – other risks. To manage reputational risk, we remain focused on sustainable and profitable growth,

fulfilling our role in society and the local economy to the benefit of all stakeholders. We promote a strong corporate culture that encourages responsible behaviour throughout the organisation, including social and environmental responsibilities. We put the clients' interests at the heart of what we do and foster trust by treating the client fairly and honestly.

The governance, rules and procedures and how reputational risk management should be performed throughout the group are outlined in the Reputational Risk Management Framework. Its implementation is monitored by Group Risk. Proactive and reactive management of reputational risk is the responsibility of the business, supported by specialist units (including Group Communication, Investor Relations and Group Compliance). In this respect, we actively monitor

a non-exhaustive list of business indicators which provide valuable input from a risk management perspective, including Net Promoter Scores (NPS), the Corporate Reputation Index, statistics on complaints, ESG ratings and the development of the stock price index and other financial indicators.

Managing and reporting on reputational risks is also significantly relevant in the context of crisis management. Any crisis, big or small, can have an impact on our reputation. Therefore, preparation, speed of action and good communication are crucial in any crisis to improve the likelihood of successfully weathering it and to limit reputational damage. To support its reputational resilience, KBC proactively prepares for potential crisis situations via, for example, its Business Continuity Plans (as outlined in the 'Operational risk' section) and the Recovery Plan.

# How do we manage our capital?

Capital Management is a key management process relating to all decisions on the level and composition of our capital. It aims to achieve the best possible balance between regulatory requirements, rating agencies' views, market expectations and management ambitions.

## Solvency reporting

We report the solvency of the group, the bank and the insurance company based on IFRS data and according to the rules imposed by the regulator. For the KBC group, this implies that we calculate our solvency ratios based on CRR/CRD.

CRR/CRD implements the Basel rules in Europe and is updated from time to time. When new requirements are implemented, a transitional period during which these rules are gradually phased in may be allowed. Currently, KBC makes use of the IFRS 9 transitional measures (applied as from the second quarter of 2020). These make it possible to add back a portion of the increased impairment charges to common equity capital (CET1) when provisions unexpectedly rise due to a worsening macroeconomic outlook, during the transitional period until 31 December 2024.

Based on CRR/CRD, profit can be included in CET1 capital only after the profit appropriation decision by the final decision-making body (for KBC Group this is the General Meeting). The ECB can allow the inclusion of interim or annual profit in CET1 capital before the decision by the General Meeting. In that case, the foreseeable dividend should be deducted from the profit that is included in CET1. Considering that our dividend policy of 'at least 50%' does not include a maximum, the ECB requires the use of a 100% payout to determine the foreseeable dividend.

Consequently, KBC no longer requests ECB's approval to include interim or annual profit in CET1 capital before the decision of the General Meeting. As such, the annual profit of 2024 and the final dividend for 2024 will be recognised in the *transitional CET1* of the first quarter of 2025, which will be reported after the General Meeting. Since 31 December 2021, the *fully loaded* figures immediately reflect the interim or annual profit, taking into account our Dividend Policy and/or any dividend proposal/decision by the Board of Directors.

The general rule under CRR/CRD for insurance participations is that an insurance participation is deducted from common equity at group level, unless the competent authority grants permission to apply a risk weighting instead (Danish compromise). Since the fourth quarter of 2020, the revised CRR/CRD requires the use of the equity method, unless the competent authority allows institutions to apply a different method. KBC has received ECB's approval to continue to use the historical carrying value (a historical carrying value of 2 469 million euros) for risk weighting (370%), after having deconsolidated KBC Insurance from the group figures.

## Solvency requirements

The minimum solvency ratios required under CRR/CRD are 4.5% for the common equity tier-1 (CET1) ratio, 6% for the tier-1 capital ratio and 8% for the total capital ratio (i.e. pillar 1 minimum ratios). In addition, CRR/CRD requires a capital conservation buffer of 2.5%.

As a result of its supervisory review and evaluation process (SREP), the competent supervisory authority (in KBC's case, the ECB) can require that higher minimum ratios be maintained (= pillar 2 requirements). Following the SREP cycle for 2024, the ECB formally notified KBC that the pillar 2 requirement (P2R) is unchanged at 1.86% (of which 1.09% in CET1 taking into account CRD Article 104a). The CET1 requirement related to P2R now includes 100% of the 11-basis-point add-on related to the back-stop shortfall for old non-performing loans (exposures defaulted before 1 April 2018). KBC may consider further optimising its capital structure by filling up the AT1 and T2 buckets within the P2R.

The pillar 2 guidance (P2G) is unchanged at 1.25% of CET1.

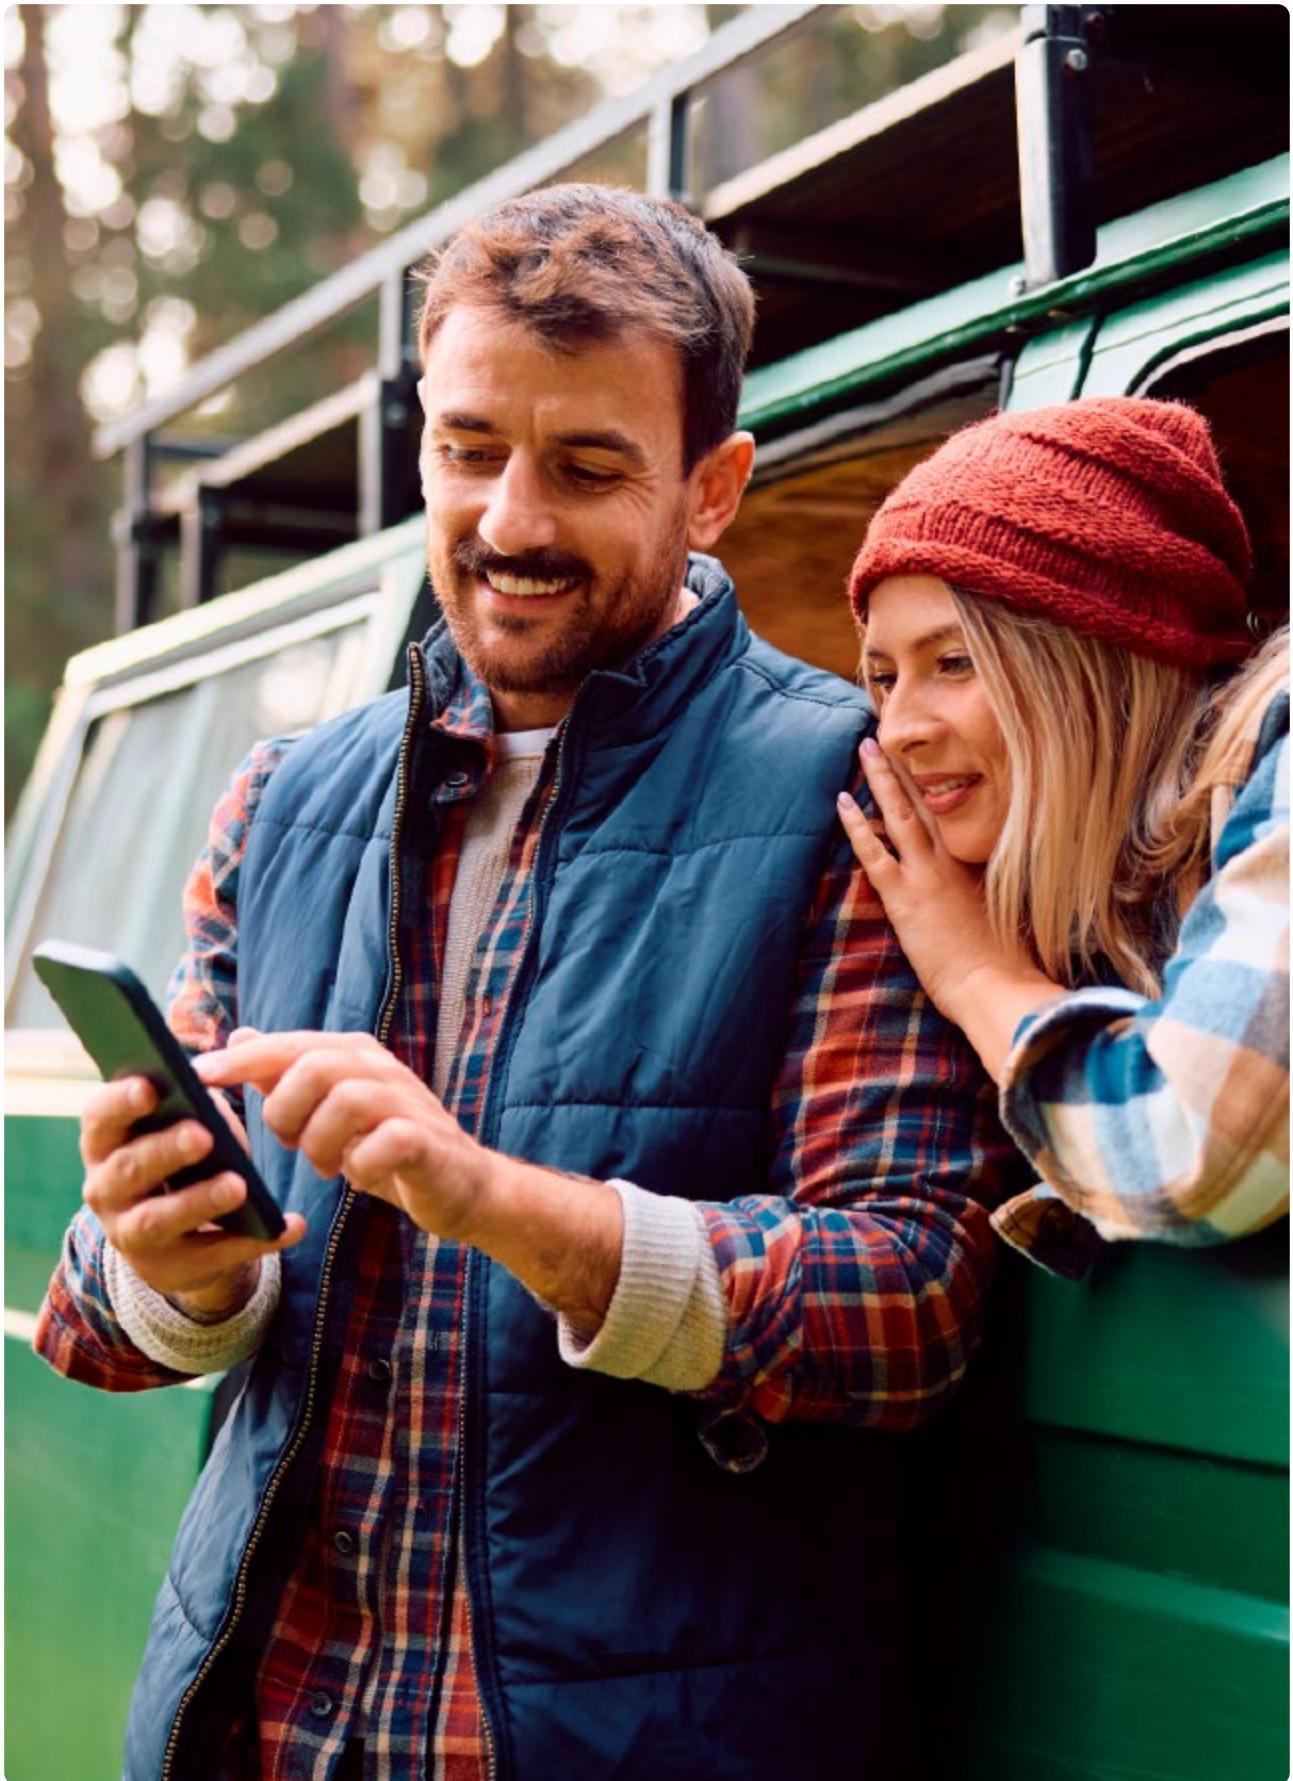

The overall capital requirement for KBC is determined not only by the ECB, but also by the decisions of the local competent authorities in its core markets. The most recently announced countercyclical buffer rates by the countries where KBC's relevant credit exposures are located correspond to a countercyclical buffer at KBC group level of 1.15%.

For Belgian systemic financial institutions, the NBB had already announced its systemic capital buffers at an earlier date. For the KBC group, this means that an additional capital buffer of 1.5% of CET1 is required.

On 1 May 2022, the National Bank of Belgium (NBB) introduced a sectoral systemic risk buffer. The amount of the CET1 capital buffer corresponds to 6% as from April 2024 of the RWA under the IRB approach for the exposures secured by residential real estate in Belgium, which corresponds to 0.14% of total RWA for KBC Group consolidated.

Altogether, this brings the fully loaded CET1 requirement (under the Danish compromise) to 10.88%.

The data above reflects the situation as known on 31 December 2024.

## Solvency figures under CRR/CRD

	31-12-2024 Fully loaded	31-12-2024 Transitional	31-12-2023 Fully loaded	31-12-2023 Transitional

<b>Solvency ratios</b>				
Common equity ratio (or CET1 ratio)	15.0%	13.9%	15.2%	13.8%
Tier-1 ratio	16.5%	15.4%	16.8%	15.4%
<b>Total capital ratio</b>	<b>18.7%</b>	<b>17.5%</b>	<b>18.8%</b>	<b>17.5%</b>

1 The difference between the fully loaded and the transitional figure as at 31-12-2024 is explained by the net result for 2024 (3 333 million euros under the Danish compromise method), the proposed final dividend (-1 926 million euros) and the impact of the IFRS 9 transitional measures and IRB excess/shortfall (-81 million euros).

2 Audited figures (excluding 'IRB provision shortfall', 'Value adjustment due to requirements for prudent valuation' and 'Deduction regarding NPL backstops').

3 CRR ensures that prudent valuation is reflected in the calculation of available capital. This means that the fair value of all assets measured at fair value and impacting the available capital (by means of fair value changes in P&L or equity) needs to be brought back to its prudent value. The difference between the fair value and the prudent value (also called the 'additional value adjustment' or AVA) must be deducted from the CET1 ratio.

4 NPL backstops refer to the minimum coverage requirements on non-performing loans for loans originated after 26 April 2019 (CRR requires a deduction from CET1) and the ECB's minimum coverage expectations on non-performing loans for exposures defaulted after 1 April 2018 but originated before 26 April 2019 (KBC decided to voluntary deduct from CET1 any shortfalls relative to supervisory expectations).

5 In September 2024, KBC Group issued a new AT1 for an amount of 750 million euros and at the same time repurchased 636 million euros from the 1-billion-euro AT1 instrument that was issued in April 2018 and that has a first call date of 24 October 2025.

6 The EBA Monitoring report on AT1, tier-2 and TLAC/MREL eligible liabilities instruments (27 June 2024) recommends the use of the carrying amounts (including accrued interest and hedge adjustments) instead of nominal amounts for own funds calculation. KBC has applied this EBA recommendation: as at 31-12-2024 it had a 47-million-euro positive impact on tier-2 capital at KBC Group level.

7 The HVAR and SVAR multiplier used for the calculation of market risk is equal to 3.0.

The fully loaded CET1 ratio dropped from 15.2% at year-end 2023 to 15.0% at year-end 2024, which is explained by the 2024 profit (impact of +2.9 percentage points), the proposed 4.85 euros-per-share dividend (0.70 euros in extraordinary dividend related to 2023 and 4.15 euros in proposed dividend related to 2024; impact of -1.7 percentage points), the increase in RWA (impact of -1.1 percentage points) and prudential adjustments (including DTA and IRB shortfall; impact of -0.5 percentage points).

Note: the recognition in profit and loss (+0.3 billion euros) of the deferred tax asset resulting from the liquidation of Ireland is deducted from KBC's regulatory capital (-0.3 billion euros) and is therefore neutral for KBC's regulatory capital. However, the application of 50% dividend payment on the additional result of 0.3 billion euros had a limited negative impact on KBC's fully loaded CET1 ratio of -0.13%-points.

Moving towards the Basel 4 era, and applying a static balance sheet (first half of 2024) and all other parameters ceteris paribus, without any mitigation actions, KBC projects:

- on 1 January 2025: a first-time application impact of 1 billion euros in risk-weighted assets;
- by 1 January 2033: a further impact of 7.5 billion euros in risk-weighted assets.

The impact on the common equity ratio of the most significant acquisitions and disposals in 2024 and 2023 is described in Note 6.6 of the 'Consolidated financial statements' section.

Solvency at group level (consolidated; CRR/CRD, deduction method) (in millions of EUR)	31-12-2024 Fully loaded	31-12-2024 Transitional	31-12-2023 Fully loaded	31-12-2023 Transitional
Common equity	17 303	15 843	16 521	14 755

CET1 buffer (= buffer compared to MDA) (in millions of EUR)	4 212	2 919	4 036	3 105

## Solvency figures under FICOD

KBC also has to disclose its solvency position as calculated in accordance with the Financial Conglomerate Directive. In line with this directive, available capital is calculated on the basis of the consolidated position of the group and the eligible items recognised as such under the prevailing sectoral rules, which are CRD for the banking business and Solvency II for the insurance business. The resulting available capital is to be compared with a capital requirement expressed as a risk-weighted asset amount. For this latter

figure, the capital requirements for the insurance business (based on Solvency II) are multiplied by 12.5 to obtain a risk-weighted asset equivalent (instead of the 370% risk weighting applied to the equity value in the insurance company under the Danish compromise).

KBC is required to satisfy the pillar 1 requirements. No pillar 2 requirements or management target are defined at the level of the FICOD ratio.

**Solvency at group level (consolidated; FICOD method)  
(in millions of EUR)**

More details, including a description of the processes used to manage the risk of excessive leverage, can be found in KBC's Risk Report, which is available at [www.kbc.com](http://www.kbc.com) (the risk report has not been audited by the statutory auditor).

## Minimum requirement for own funds and eligible liabilities (MREL)

Besides the ECB and NBB, which supervise KBC on a going concern basis, KBC is also subject to requirements set by the Single Resolution Board (SRB). The SRB is developing resolution plans for the major banks in the euro area.

The resolution plan for KBC is based on a Single Point of Entry (SPE) approach at KBC group level, with 'bail-in' as the primary resolution tool. Bail-in implies a recapitalisation and stabilisation of the bank by writing down certain unsecured liabilities or converting them into shares. The SPE approach at group level reflects KBC's business model, which relies heavily on integration, both commercially (e.g., banking and insurance) and operationally (e.g., risk, finance, treasury, ICT, etc.). Debt instruments that are positioned for bail-in are issued by KBC Group NV. This approach keeps the group intact in resolution and safeguards the bank-insurance model in going concern.

It is crucial that there are adequate liabilities eligible for bail-in. This is measured by the minimum requirement for own funds and eligible liabilities (MREL). The SRB defines the minimum MREL level for KBC. It communicated MREL targets to KBC expressed as a percentage of Risk-Weighted Assets (RWA) and Leverage Ratio Exposure Amount (LRE):

- 28.48% of RWA as from the fourth quarter of 2024 (including a transitional Combined Buffer Requirement of 5.25%);
- 7.42% of LRE.

Besides a total MREL amount, BRRD2 also requires KBC to maintain a certain part of MREL in subordinated form. The binding subordinated MREL targets are:

- 24.05% of RWA as from the fourth quarter of 2024 (including a Combined Buffer Requirement of 5.25%);
- 7.42% of LRE.

MREL (in millions of EUR)	31-12-2024	31-12-2023
Own funds and eligible liabilities (transitional)	36 818	34 672
CET1 capital (consolidated, CRR/CRD, Danish compromise method)	16 621	15 639
AT1 instruments (consolidated, CRR/CRD)	1 864	1 750
T2 instruments (consolidated, CRR/CRD)	2 563	2 379
Subordinated liabilities (issued by KBC Group NV but not included in AT1 & T2)	0	8
Senior debt (issued by KBC Group NV, nominal amount, remaining maturity > 1 year)	15 770	14 897
Risk-Weighted Assets (RWA)	119 950	113 029
MREL as a % of RWA	30.7%	30.7%
Leverage Ratio Exposure Amount (LRE)	360 092	333 894
MREL as a % of LRE	10.2%	10.4%

Information on ICAAP, ORSA and stress testing is provided in KBC's Risk Report, available at [www.kbc.com](http://www.kbc.com).

# Corporate governance statement

The main aspects of our corporate governance policy are set out in the Corporate Governance Charter of KBC Group NV (the 'Charter', which is published at [www.kbc.com](http://www.kbc.com)). We have adopted the 2020 version of the Belgian Corporate Governance Code ('Code 2020') as our benchmark. It can be downloaded at [www.corporategovernancecommittee.be](http://www.corporategovernancecommittee.be). The company has complied with all the provisions of this code, except for those deviated from, for the reasons explained in this section.

More factual information regarding corporate governance and on the application of certain statutory provisions is contained in this corporate governance statement.

Unless otherwise indicated, the period dealt with runs from 1 January 2024 to 31 December 2024.

A number of terms have been abbreviated as follows in this section of the annual report:

- Board of Directors: Board
- Executive Committee: ExCo
- Audit Committee: AC
- Risk & Compliance Committee: RCC
- Companies and Associations Code: CAC
- The Belgian Act of 25 April 2014 on the legal status and supervision of credit institutions: The Banking Act

## Composition of the Board and its committees at year-end 2024

A list of the external offices held by all members of the Board is provided at [www.kbc.com](http://www.kbc.com), as is a brief CV for each director. The number of meetings attended is shown in the columns relating to the committees.

Company	Primary responsibility	Period served on the Board in 2024

Statutory auditor: PricewaterhouseCoopers (PwC), represented by Damien Walgrave and Jeroen Bockaert.

Secretary to the Board: Wilfried Kuipers.

(c) Chairman of this committee.

\* Appointed by the Board as member of the RCC in August 2024.

## Changes in the composition of the Board in 2024 and proposed changes for 2025

- Vladimira Papirnik resigned as director with effect from the General Meeting of 2024. At the General Meeting in 2024, Diana Rádl Rogerová was appointed as an independent director for a four-year term of office, within the meaning of and in line with the relevant legal criteria and Code 2020.
- At the General Meeting in 2024, Johan Thijs, Erik Clinck, Sonja De Becker and Liesbet Okkerse were re-appointed as directors for a four-year term of office, and Theodoros Roussis was re-appointed as director for a one-year term of office.
- With the approval of the ExCo and on the advice of the Nomination Committee, the Board decided to appoint Bartel Puelinckx as new Chief Financial Officer and member of the ExCo. He succeeded Luc Popelier, who resigned to take up the position of CEO of Hamburg Commercial Bank (Germany) as of 1 September 2024. Bartel Puelinckx's appointment as CFO took effect on 1 September 2024, and he was co-opted by the Board to complete Luc Popelier's remaining term of office. It will be proposed to the General Meeting of Shareholders of 30 April 2025 to proceed to a definitive appointment for a four-year term of office.
- Theodoros Roussis has reached the age limit of 70. His succession will be proposed to the General Meeting.
- With a view to strengthening the company's governance, it is proposed to the General Meeting to appoint two additional independent directors for a four-year term of office, within the meaning of and in line with the relevant legal criteria and Code 2020.
- On the advice of the Nomination Committee, Philippe Vlerick is nominated for re-appointment as director for a one-year term of office.

Brief CV of Bartel Puelinckx:

- After graduating in applied economics from the Katholieke Universiteit Leuven (KU Leuven) and obtaining a law degree from the Université Libre de Bruxelles (ULB), Bartel, born on 16 December 1965, started his career in trade finance at Kredietbank (Belgium) in 1992. In 2002, he was appointed at KBC Bank as group-wide relationship manager for major multinational business clients. From 2006 to 2010, he worked for K&H, the Hungarian banking subsidiary of KBC, where he was responsible for managing corporate banking policy. After being nominated to the Executive Committee of K&H in 2007, he took charge of HR management and credit policy. He was Chief Finance Officer for KBC's Czech banking subsidiary ČSOB from 2010 to 2014, where he also headed up Finance Management, Asset & Liability Management, Credit Management and Investor Relations. He was also a member of the Board of Directors of ČMSS (a subsidiary specialising in mortgage loans) since 2010, and represented ČSOB in that board as main shareholder. He returned to Belgium in July 2014 where he was appointed Senior General Manager of Group Finance. He was appointed CEO of KBC Securities NV in September 2016 and Senior General Manager Group Compliance since 1 May 2019.

The CVs for the three other new proposed directors, the Corporate Governance Charter, the CVs for the other members of the Board and the agenda for the General Meeting can be found at [www.kbc.com](http://www.kbc.com).

\* 'Joined company in ...' refers to KBC Group NV, group companies or pre-merger entities (Kredietbank, Cera, ABB, etc.).

### Changes in 2024:

- Luc Popelier was succeeded by Bartel Puelinckx as of 1 September 2024. See previous paragraph.

## Governance model

On 31 December 2024, the Board had 16 members, namely:

- Its Chairman, who is an independent director;
- Two independent directors;
- Three members of the ExCo (the CEO, the CFO and the CRO);
- Ten representatives of the core shareholders.

Given that the Banking Act stipulates that at least three members of the ExCo should also be directors (acting as 'executive directors'), it is legally not possible to implement a pure, dual governance structure with a clear split between the Board (dealing with strategy, risk appetite and the supervision of management) and the ExCo (operational management). The CEO, the CFO and the CRO are all executive directors.

The core shareholders (Cera, KBC Ancora, MRBB and the other core shareholders) have concluded a shareholder agreement in order to ensure shareholder stability and a long-term focus for the management of the group, as well as to support and coordinate its general policy. To this end, the core shareholders act in concert at the General Meeting of KBC Group NV and were represented on its Board by ten directors at year-end 2024.

It will be proposed to the General Meeting of Shareholders of 30 April 2025 to appoint two additional independent directors, increasing their total from three to five. Therefore, there is no majority of independent directors on the Board. However, KBC has placed a strong emphasis on selecting

high-calibre, independent directors at the level of KBC Group NV, as well as on the boards of KBC Bank and KBC Insurance. These individuals are of high standing, come from diverse backgrounds and bring specific financial and governance expertise to the Board. Moreover, the boards of KBC Group NV, KBC Bank and KBC Insurance always hold joint meetings in practice. Since the Boards of both KBC Bank and KBC Insurance also at all times include two independent directors, the joint Board meetings will actually be attended by nine independent directors. The collective nature of the decision-making process generally used in these joint Board meetings also reflects the importance attached to the views of the independent directors.

The core shareholders' wish for their representatives to hold a majority on the Board is considered the corollary of the commitment they have made in the context of their shareholder agreement, with the aim of ensuring shareholder stability and guarantee continuity for the group. Given the long-term nature of their commitment, the core shareholders inherently pay particular attention to value creation, a solid capital base, prudent risk management, sustainability and social relevance in the geographical areas where the group is active. With effect from the Annual Meeting, all advisory committees will include a majority of independent directors.

All members of the ExCo participate in the Board's meetings, except when it meets to discuss the operations of the ExCo and the remuneration to be granted to members of the ExCo, and when requested by non-executive Board members.

## Diversity policy

The Board has drawn up a policy regarding the desired amount of diversity in the composition of the Board itself and in the ExCo. The aim of this policy is to guarantee diversity in terms of know-how, experience, gender and geographical background. It aims to ensure that the Board and the ExCo can both fall back on a broad base of relevant competences and know-how and receive diverse opinions and input for their decision-making process.

The policy stipulates that the Board should have a balanced composition to ensure that it has suitable expertise in the area of banking and insurance, the requisite experience in executive management and a broad awareness of societal and technological developments.

The policy also stipulates that:

- At least one-third of the Board's members must be of a different gender than the other members;
- The members of the Board must be of different nationalities, with due account being taken of the different geographical areas where KBC is active;
- At least three directors must be independent within the meaning of and in line with the criteria set out in Article 7:87 of the CAC;
- Three members of the ExCo must also sit on the Board.

The Board usually holds its meetings together with the Boards of KBC Bank and KBC Insurance. The two additional independent directors on each of these two boards provide extra expertise and diversity.

The policy also stipulates that the ExCo should have a balanced composition to ensure that it has suitable expertise regarding the financial sector and the requisite know-how relating to all areas in which KBC operates.

The policy also stipulates that:

- At least one member of the ExCo must be of a different gender than the other members; the objective is to achieve a more balanced gender composition;
- The ExCo should strive towards achieving diversity in terms of the nationality and age of its members;
- All members of the ExCo have the necessary and diversified financial knowledge, professional integrity and management experience, but have followed different career paths.

The Board will see to it that this diversity policy is applied properly when deciding on the profile of a new director or a new member of the ExCo.

The Nomination Committee regularly checked to see whether this policy was being applied in practice and established that this was the case in 2024. For the purpose of strengthening the company's governance – and upon the proposal of the Nomination Committee – the Board decided to propose to the General Meeting that two additional independent directors be appointed.

A complete CV for each member of the Board and the ExCo is provided at [www.kbc.com](http://www.kbc.com) > Corporate Governance > Leadership.

A table reflecting the diversity among the Board and ExCo members is provided under 1.2.1 in the 'Sustainability statement' section.

## AC: application of Article 7:99 of the CAC and section 6.2.3 of the Charter

On 31 December 2024, the AC had two independent directors within the meaning of and in line with the criteria set out in Article 7:87 of the CAC and in Code 2020:

- Diana Rádl Rogerová holds a Master's Degree in International Trade, Monetary Economics and Banking (VŠE, University of Economics and Business in Prague). In 2006, she became an audit partner at Deloitte in Prague and from 2016 to 2022, she was a managing partner of Deloitte Czech Republic. In 2022, Diana founded Behind Inventions, an investment company that has a number of technological start-ups in its portfolio, and became its managing partner.
- Alicia Reyes Revuelta holds a Master's Degree in Law, Economics and Business Administration (ICADE, Madrid) and a PhD in Quantitative Methods and Financial Markets (ICADE, Madrid). She has held senior management positions at Bear Stearns, Olympo Capital and Wells

Fargo, and is currently an independent Board Member of Ferrovial, Energias de Portugal and Banco Sabadell, and a Fellow Professor at the Institute of Finance and Technology (University College London).

The Chairman of the AC is:

- Marc De Ceuster (non-executive director), who holds a Doctor's degree in Applied Economics (UFSIA Antwerp) and a Master's Degree in Law (UIA Antwerp). He is Professor of Financial Economics at the University of Antwerp and Executive Director of CERA and KBC Ancora.

It can be concluded on the basis of the profiles and competences of the members of the AC that the committee is constructed and has the requisite skills and experience in accordance with the requirements of Article 7:99 of the CAC and of section 6.2.3 of the Charter.

## RCC: application of Article 56, §4 of the Banking Act and section 6.3.3 of the Charter

On 31 December 2024, the RCC of KBC Group NV had two independent directors within the meaning of and in line with the criteria set out in Article 7:87 of the CAC and in Code 2020:

- Diana Rádl Rogerová (see CV above);
- Alicia Reyes Revuelta (see CV above).

The other members of the RCC are:

- Franky Depickere (non-executive director), who holds Master's Degrees in Trade & Finance (UFSIA Antwerp) and in Financial Management (VLEKHO Business School). He was internal auditor at CERA Bank and has held positions and offices in various financial institutions. He is currently Managing Director at Cera and KBC Ancora. Mr Depickere is the Chairman of the RCC.
- Frank Donck (non-executive director), who holds a Master's Degree in Law (UGent) and a Master's Degree in Finance (Maastricht Business School). He is Managing Director of 3D NV,

Chairman of Atenor Group NV, and an independent director at Barco NV, Elia System Operator Group NV and Luxempart SA. He also holds directorships at several unlisted companies. Mr Donck is a member of the Belgian Corporate Governance Commission.

- Sonja De Becker (non-executive director), who holds a Master's Degree in Law (KU Leuven). She has held several positions at Boerenbond and Landelijke Gilden, where she was Chair from 2015 to 2022. She is currently the Chair of MRBB, Arvesta, Agri Investment Fund, SBB Accountants & Adviseurs and Aktiefinvest, and Director of Acerta.

It can be concluded on the basis of the profiles and competences of the members of the RCC that the committee is constructed in accordance with the requirements of the Charter and it possesses the requisite skills and experience.

## Remuneration Committee: application of Article 56, §4 of the Banking Act and section 6.5.2 of the Charter

On 31 December 2024, the Remuneration Committee had two independent directors within the meaning of and in line with the criteria set out in Article 7:87 of the CAC and in Code 2020:

- Koenraad Debackere (independent director and Chairman of the Board), who holds a Master of Science in Electromechanical Engineering and a Doctor's degree in Management. He is an ordinary Professor at the Faculty of Economics and Business at KU Leuven and Chairman of the KU Leuven Association. He is also an independent director at Umicore NV. Koenraad Debackere chairs the Remuneration Committee.
- Alicia Reyes Revuelta (see CV above).

The other member of the Remuneration Committee is:

- Philippe Vlerick (non-executive director), who holds a Bachelor's Degree in Philosophy, a Master's Degree in Law (KU Leuven), a Master's Degree in Management (Vlerick

Business School in Ghent) and an MBA degree (Indiana University, Bloomington, USA). He is Executive Chairman of Vlerick Group and of UCO, Chairman of Raymond Uco Denim, BIC Carpets, Pentahold, Besix Group and Smartphoto, Non-Executive Director of Exmar, Concordia Textiles, B.M.T, L.V.D. and Mediahuis, Director of Vlerick Business School, and Chairman of Festival of Vlaanderen and of Europaia.

It can be concluded on the basis of the profiles and competences of the members of the Remuneration Committee that the committee is constructed in accordance with the requirements of the Charter and it possesses the requisite skills and experience.

## Nomination Committee: application of Article 56, §4 of the Banking Act and section 6.4.2 of the Charter

On 31 December 2024, the Nomination Committee of KBC Group NV had two independent directors within the meaning of and in line with the criteria set out in Article 7:87 of the CAC and in Code 2020:

- Koenraad Debackere, Chairman of the Nomination Committee (see CV above);
- Diana Rádl Rogerová (see CV above).

The other members of the Nomination Committee are:

- Franky Depickere (see CV above).
- Philippe Vlerick (see CV above).
- Sonja De Becker (see CV above).

It can be concluded on the basis of the profiles and competences of the members of the Nomination Committee that the committee is constructed in accordance with the requirements of the Charter and it possesses the requisite skills and experience.

## Application of and non-compliance with Code 2020

The corporate governance statement included in the annual report must indicate whether any provisions of Code 2020 have not been complied with and state the reasons for non-compliance (the 'comply-or-explain principle'). This involves the following provisions:

Provision 4.19 of Code 2020 stipulates that the Board should set up a nomination committee composed of a majority of independent non-executive directors.

As specified above, on 31 December 2024 the Nomination Committee was composed of five directors, one of whom was the Chairman of the Board (who is also an independent director), a second independent director, and three who represented the core shareholders.

When selecting the members of the Nomination Committee, the group took due account of the specific shareholder structure and, in particular, of the presence of the core shareholders. Given their long-term engagement, the Board considered it appropriate to involve them in a suitable manner in the activities of this committee. With effect from the Annual Meeting of 30 April 2025, the Nomination Committee will also be composed of a majority of independent directors, in accordance with the provisions of Code 2020.

Code 2020 also stipulates that the 'Corporate governance statement' must contain all relevant information on events that affected governance. Besides the matters set out above, no other such events occurred in 2024.

## Statutory auditor

The statutory auditor, PwC Bedrijfsrevisoren BV (PwC), was represented by Messrs Damien Walgrave and Jeroen Bockaert.

On the recommendation of the AC and with the approval of the regulator, KPMG Bedrijfsrevisoren is nominated by the Board for appointment as auditor by the Annual Meeting for a three-year term of office. The auditor will be represented by Messrs Kenneth Vermeire and Stéphane Nolf.

KPMG Bedrijfsrevisoren was also appointed by the Annual Meeting in 2024 as auditor for the assurance of the sustainability reporting.

Details of the statutory auditor's remuneration are provided in Note 6.4 of the 'Consolidated financial statements' section.

## Report on the activities of the Board and its committees in 2024

### Board

Besides carrying out the activities required by law, reviewing the quarterly results and the activities of the AC, RCC, Nomination Committee and Remuneration Committee, and handling and taking decisions on the dossiers submitted by these committees, the Board also dealt with the following matters:

- The strategy and operations (focusing on banking and insurance) in the Belgium, Czech Republic, Bulgaria and Slovakia business units/countries, and in Markets and KBC Asset Management;
- Governance;
- The capital policy and dividend policy;
- Share buybacks;
- The introduction of the CSRD;
- The sustainability strategy and the associated dashboards;
- The IT strategy and digital transformation (including Kate and strategy, transformation and innovation trends);
- The Rainbow project (creation of a platform ensuring high-quality financial, risk and treasury reports) and Starlight (data quality management);

- Implementing the (re)insurance strategy;
- Reviewing the Corporate Sustainability strategy and the Sustainable Finance Programme;
- The HR policy, with particular attention being paid to the succession policy;
- The strategy of the group's Competence centres and of the group's Organisation and operations;
- The outsourcing policy;
- The ICAAP/ILAAP/ORSA Report;
- The Risk Appetite Statement;
- The risk reports;
- The compliance reports and the compliance function;
- Reviewing the Internal Control Statement;
- The Board's self-assessment.

The ExCo reported monthly on the trend in the results and the general course of business at the group's various business units. In addition, the Board focused on the strategy and specific challenges for the different areas of activity.

Regular training sessions were also organised for all members of the Board (newly appointed directors also

followed an extensive induction programme). The following topics were addressed: generative artificial intelligence; the internal model landscape, the transposition of CSRD; the EU data strategy; Basel IV and MiCAR. Furthermore, an exhaustive training programme was developed and rolled out covering the insurance activities.

Sustainability parameters have been incorporated into the KBC Sustainability Dashboard to enable the situation within the KBC group to be monitored and adjustments to be made, where necessary. The Board assesses the performance of these parameters twice a year. More information in this regard can be found in the 'Sustainability statement' section.

## Audit Committee (AC)

The AC is tasked with a number of responsibilities, including advising the Board on the integrity of financial and non-financial reporting and the effectiveness of the internal control process and risk management. It provides guidance to the internal audit function and supervises the external auditor. The AC of KBC Group NV acts in the same capacity for KBC Global Services.

The AC met in the presence of the President of the ExCo, the Group CRO, the Group CFO, the internal auditor, the compliance officer and the statutory auditors. Besides reviewing the company and consolidated financial statements, the annual report, the half-year and quarterly figures, approving the relevant press releases and discussing the auditor's findings – including the declaration of independence – it also discussed the quarterly reports drawn up by the internal auditor (including the approved annual audit plan).

The AC also examined:

- The statement of effective management with regard to the assessment of internal control systems and the monitoring of the resulting action plans;
- Intra-group conflicts of interest;
- The results of inspections performed by the supervisory authorities and the action plans drawn up by management;
- The evaluation of the internal audit function and the corresponding remuneration, including the results of the periodic external quality assessment;
- The selection process for the external auditor's term of office;
- The first-time adoption of the CSRD rules, including the outcome of the Double Materiality Assessment.

## Risk & Compliance Committee (RCC)

The RCC advises the Board on current and future risk tolerance and on risk strategy, and assists it in supervising how the ExCo implements this strategy. It ensures that the prices of assets and liabilities and of categories of off-balance-sheet products that are offered to clients, factor in

the risks run by the institution, with due account taken of its business model and risk strategy, viz. risks – especially reputational risks – that might arise from the types of product offered to clients. The RCC monitors the risk and compliance functions. The RCC of KBC Group NV acts in the same capacity for KBC Global Services.

The RCC met in the presence of the President of the ExCo, the Group CRO, the Group CFO, the internal auditor, the compliance officer and the statutory auditors. Besides discussing the periodic reports from the risk function and the compliance officer, it also examined the reports drawn up by the legal, tax and branch inspection departments.

The RCC paid special attention to:

- ESG and Climate-related risk as part of the periodic reports from the risk function;
- Major digitalisation projects such as Rainbow and Temenos;
- Progress reports on the implementation of the EU data policy (GDPR, Schrems II), and other specific regulations, such as AML and MiFID as well as EC regulations;
- The statement of effective management with regard to the assessment of internal control systems and the monitoring of the resulting action plans;
- The ICAAP-ILAAP Report for 2024;
- The KBC ORSA Report for 2024;
- The KBC Recovery Plan for 2024;
- Information Security and Cyber Risk;
- The results of inspections performed by the supervisory authorities and the action plans drawn up by management;
- The updated Compliance Charter;
- The Integrity Policy and the updated Incompatibility Code;
- The Compliance Annual Report to the Board;
- The Data Protection Officer Report;
- The Conflict of Interest Report;
- The Anti-Money Laundering Committee Report;
- The Enterprise-Wide Risk Assessment;
- The Taping and the Conflict of Interest Policy;
- The Complaints Handling Report;
- The Acceptance Policy;
- The Whistleblower Policy;
- The Group Treasury Frameworks.

## Nomination Committee

The Nomination Committee of KBC Group NV acts in the same capacity for KBC Insurance, KBC Bank and KBC Global Services.

The main matters dealt with were:

- Appointments and reappointments to the Board;
- Succession planning for the Board and the ExCo;
- Profile development methodology for the Top 300;
- Changes to the governance of the company;

- Assessment of the collective suitability of the ExCo and the Board;
- Creation of a profile for each Board member and the related education portfolio;
- The HR policy;
- Evaluation of the operations and composition of the Board and the Nomination Committee.

## Remuneration Committee

The Remuneration Committee of KBC Group NV acts in the same capacity for KBC Insurance, KBC Bank and KBC Global Services. The Remuneration Committee met each time in the presence of the Chairman of the RCC, with the President of the ExCo usually in attendance too.

The main matters dealt with were:

- The assessment of the criteria for evaluating the ExCo in 2023;
- The criteria for evaluating the ExCo in 2024;
- The annual Remuneration Review;
- The remuneration of the AC and RCC members;
- The preparation of the remuneration report;
- The update of the pension regulations for DC members.

For a general description of how the Board and its committees function, see sections 5 and 6 of the Charter of KBC Group NV (at [www.kbc.com](http://www.kbc.com)).

## Principal features of the evaluation process for the Board, its committees and its members

Under the leadership of its Chairman and assisted by the Nomination Committee, the Board evaluates at least once every three years its own performance, how it interacts with the ExCo, and its scope, composition and operations, as well as that of the committees.

Each Board committee carries out an evaluation of its own composition and operations at least once every three years, before reporting its findings and, where necessary, making proposals to the Board.

Directors who are nominated for reappointment are subject to an individual evaluation regarding their attendance at Board and committee meetings and their contribution to and

constructive involvement in discussions and decision-making. This evaluation is conducted by the Nomination Committee.

On the initiative of the President of the ExCo, the full ExCo discusses its objectives and assesses its performance once a year. Each year, the President of the ExCo evaluates each member of the ExCo individually after which the evaluations are discussed in the Remuneration Committee and approved by the Board. The individual evaluation of the President is performed by the Chairman of the Board in consultation with the Remuneration Committee before being approved by the Board.

## Conflicts of interest that fell within the scope of Article 7:115, 7:116 or 7:117 of the CAC

During financial year 2024, the Board's decision on the assessment of the ExCo members required the application of Article 7:115 of the CAC. The proposal was discussed at the Board meeting of 7 February 2024, the relevant minutes of which are provided below:

*The Board discusses the individual performance score of the Executive Committee members (except the CEO). The Board agrees.*

*The CEO then leaves the meeting and the Board discusses and agrees upon the proposal of the Remuneration Committee as to the individual performance score of the CEO.*

*The Chair further explains that the Remuneration Committee discussed the (collective) KPI's of the Executive Committee for 2023 and came to a global score of 98.92% (compared to 97.79 in 2022). As for the CRO the risk & control parameters count double and the business parameters are not taken into account (due to regulatory requirements), the final score for the CRO is 98.58%.*

In addition, the Board's decision to grant discharge to the ExCo members – in implementation of Article 7:109, §3 of the

CAC – required the application of Article 7:115 of the CAC. The proposal was discussed at the Board meeting of 14 March 2024, the relevant minutes of which are provided below:

*It is explained that KBC Group NV has a dual governance model, though hybrid as at least 3 members of the Executive Committee must also be member of the Board of Directors. Article 7:109, §3 CCA provides that, after the adoption of the annual accounts, the Board has to decide on the granting of discharge to the members of the Executive Committee. The Board has to describe the pecuniary consequences of the proposed decision and the justification for its decision.*

*The Board recognizes that there is a conflict of interest of a patrimonial nature, but that there is no patrimonial impact since the Board does not intend to bring a claim for damages against the Executive Committee and its members.*

*The Board grants discharge to the members of the Executive Committee.*

There were no conflicts of interest that required the application of Article 7:116 or 7:117 of the CAC.

## Transactions between the company and its directors and members of the ExCo, not covered by the statutory regulations governing conflicts of interest

None.

## Measures regarding insider dealing and market manipulation

The Dealing Code requires a list of key employees to be drawn up, annual blocking periods to be set, and transactions by persons with managerial responsibility and

with persons connected with them to be reported to the Belgian Financial Services and Markets Authority (FSMA).

## Main features of the internal control and risk management systems

### Part 1: Description of the main features of the internal control and risk management systems at KBC

#### A clear strategy, organisational structure and division of responsibilities set the framework for the proper performance of business activities

We examine the strategy and organisational structure of the KBC group in the 'Our business model' and 'Our strategy' sections of this annual report.

The KBC group has a dual governance structure based on the Belgian model:

- The Board is responsible for defining general strategy and policy. It exercises all the responsibilities and activities reserved to it by law and – based on a proposal by the ExCo – decides on the overall risk appetite. It appoints the members of the ExCo.
- The ExCo is responsible for the operational management of the company within the confines of the general strategy and policy approved by the Board. To assume its specific responsibility towards financial policy and risk

management, the ExCo appoints a chief financial officer (CFO) and a chief risk officer (CRO) from among its ranks.

The Charter describes the respective responsibilities of both management bodies, their composition and operations, as well as the qualifications their members must possess.

#### Corporate culture and integrity policy

Ethical behaviour and integrity are essential components of sound business practice. Honesty, integrity, transparency and confidentiality, together with sound risk management, are part of the strict ethical standards that KBC stands for – both in the letter and the spirit of the regulations.

We refer to our Sustainability statement elsewhere in this annual report, in which we elaborate on (our policies on) domains such as integrity, combating corruption and bribery, anti-money laundering practices, responsible taxpayers, whistleblowers and data protection.

These subjects are also covered in various (classroom and/or digital) training courses (see table).

<b>Training courses completed, 2024, KBC group</b>	<b>As a % of the selected target audience</b>
Training course on combating corruption and bribery	99%
Training course on anti-money laundering	98%
Training course on GDPR	99%
<b>Other data, 2024, KBC group</b>	<b>In numbers</b>
Conflicts of interest (non-MiFID) received	35
Donations (of or exceeding 250 euros) reported	34
Whistleblower reports received	25

### The 'Three Lines of Defence' model

#### 1 The business

The business operations side is fully responsible for all the risks in its area of activity and has to ensure that effective controls are in place. In so doing, it ensures that the right controls are performed in the right way, that self-assessment of the risks of the business side is of a sufficiently high standard, that there is adequate awareness of risk and that sufficient priority/capacity is allocated to risk themes.

#### 2 The Group risk, compliance and actuarial functions, and – for certain matters – Finance, Legal and Tax, constitute the second line of defence.

Independent of the business side, the second-line risk and control functions formulate their own opinion regarding the risks confronting KBC. In this way, they can oversee the control environment and the risks taken, without taking over primary responsibility from the first line. In this regard, the second-line functions are tasked to identify, measure and report risks. To ensure that the risk function is respected, the chief risk officers have a veto right, which can be used in the various committees where important decisions are made. The second-line risk and control functions also support the consistent implementation of the risk policy, the risk framework, etc., throughout the group, and supervise how they are applied.

Compliance is an independent function within the group, characterised by its specific status (as provided for by law and regulations and described in the Compliance Charter), its place in the organisation chart (hierarchically under the CRO with a functional reporting line to the President of the ExCo) and associated reporting lines (reporting to the RCC and even to the Board in certain cases). Its prime objective is to prevent KBC from running a compliance risk or from incurring loss/damage – regardless of its nature – due to non-compliance with applicable laws, regulations or internal rules that fall either within the scope of the compliance function or within the areas assigned to it by the ExCo. Hence, the compliance function devotes particular attention to adherence to the integrity policy.

The actuarial function is an independent function that ensures additional quality control by providing expert technical actuarial advice to the Board, the RCC, the ExCo of KBC Group NV, and to the KBC Insurance group and all reinsurance and insurance entities within the group. Such

advice covers the calculation of the technical provisions for insurance liabilities, the reinsurance policy and underwriting risk. The independence of this function is supported by its modified status, as described in the actuarial function Charter.

#### 3 As independent third line of defence, Internal Audit provides support to the ExCo, AC, RCC and the Board in monitoring the effectiveness and efficiency of the internal control and risk management system.

Internal Audit provides reasonable assurance about whether the internal control and risk management processes, including corporate governance, are effective and efficient. As independent third line of defence reporting to the AC, it performs risk-oriented audits to this end and ensures that policy measures and processes are in place that are consistently applied within the group to guarantee the continuity of operations.

Responsibilities, features, organisational structure and reporting lines, scope, audit methods, cooperation between internal audit departments of the KBC group, and outsourcing of internal audit activities are set out in the Audit Charter of KBC Group NV.

In accordance with international professional audit standards, an external entity screens the audit function on a regular basis

#### The AC and RCC play a central role in monitoring the internal control and risk management systems

Each year, the ExCo evaluates whether the internal control and risk management system is still compliant and reports its findings to the AC and RCC. These committees supervise, on behalf of the Board, the integrity and effectiveness of the internal control measures and the risk management system set up under the ExCo, with the AC paying special attention to correct financial reporting. They also examine the procedures set up by the company to see whether they comply with the law and other regulations. Their role, composition and operations, along with the qualifications of their members, are laid down in their respective charters, which are included under the Charter. More information on these committees is provided elsewhere in this section.

## Part 2: Description of the main features of the internal control and risk management systems in relation to the financial reporting process

Periodic reporting at company level is based on a documented accounting process. The accounting procedures and financial reporting process are documented in a comprehensive manual. Periodic financial statements are prepared directly from the general ledger. Bookkeeping accounts are examined to see whether they correspond to underlying inventories. The result of these controls can be demonstrated. Periodic financial statements are prepared in accordance with local accounting policies. Periodic reports on own funds are prepared in accordance with the IFRS accounting policies and the most recent National Bank of Belgium (NBB) resolutions.

The main affiliated companies have their own accounting and administrative organisation, as well as a set of procedures for internal financial controls. The consolidation process is explained in a descriptive document. The consolidation system and the consolidation process have been operational for some time and have numerous built-in consistency controls.

The consolidated financial statements are prepared in accordance with IFRS accounting policies that apply to all the companies included in the scope of consolidation. The relevant senior financial managers (CFOs) of the subsidiaries certify to the accuracy and completeness of the financial figures reported in accordance with group accounting policies. The Approval Committee, which is chaired by the general managers of the Investor Relations Office and of Experts, Reporting & Accounting, monitors compliance with IFRS accounting policies and the completeness of IFRS disclosure requirements.

Pursuant to the Banking Act, the ExCo of KBC Group NV evaluated the internal control system for the financial reporting process and prepared a report on its findings.

The group-wide roll-out of 'fast close' procedures, the monitoring of intercompany transactions within the group, and permanent follow-up of a number of key risk, performance and quality indicators continually help raise the quality of both the accounting process and the financial reporting process.

The internal control of the accounting process has been based on Group Key Control Accounting and External Financial Reporting standards since 2006. These rules for managing the main risks attached to the accounting process involve the establishment and maintenance of accounting process architecture, the establishment and maintenance of accounting policies and accounting presentations,

compliance with authorisation rules and the separation of responsibilities when transactions are registered in the accounts, and the establishment of appropriate first- and second-line account management.

The Challenger Framework and Data Management Framework define a solid governance structure and clearly describe the roles and responsibilities of the various players in the financial reporting process. The aim here is to radically reduce reporting risks by challenging input data and improving the analysis of – and therefore insight into – the reported figures.

Each year, when preparing the Internal Control Statement for the supervisory authorities, the legal entities have to assess themselves as to whether they comply with the Group Key Control Accounting and External Financial Reporting standards. The findings of this self-assessment are registered in the risk function's Group Risk Assessment Tool. Business process management (BPM) techniques are also applied, using process inventories, process descriptions (turtle diagrams) and analyses of the potential risks in the processes (Failure Mode & Effects Analysis (FMEA)), supplemented by the questionnaire completed by the CFOs. In this way, the CFOs formally confirm by substantiated means that all the defined roles and responsibilities relating to the end-to-end process for external financial reporting have been properly assumed within their entity.

KBC Group NV's Internal Audit function conducts an end-to-end audit of the accounting process and external financial reporting process at both company and consolidated level.

# Disclosure under Article 34 of the Belgian Royal Decree of 14 November 2007 concerning the obligations of issuers of financial instruments admitted to trading on a regulated market

## 1 Capital structure on 31 December 2024

The share capital was fully paid up and was represented by 417 544 151 shares of no nominal value. For more information, see the 'Additional information' section.

## 2 Restrictions on transferring securities as laid down by law or the Articles of Association

Each year, KBC Group NV carries out a capital increase for its employees and the employees of certain of its Belgian subsidiaries. If the issue price of the new shares is less than the set closing price, the employee may not transfer these new shares for two years, starting from the payment date, unless he or she dies.

The shares issued under the capital increase in 2024 remain blocked (until 11 December 2026). The shares issued under the capital increase in 2023 are issued on an undiscounted basis and therefore not blocked.

## 3 Holders of any securities with special control rights

None.

## 4 Systems of control of any employee share scheme where the control rights are not exercised directly by the employees

None.

## 5 Restrictions on exercising voting rights as laid down by law or the Articles of Association

The voting rights attached to the shares held by KBC Group NV and its direct and indirect subsidiaries are suspended. See Note 5.10 in the 'Consolidated financial statements' section.

## 6 Shareholder agreements known to KBC Group NV that could restrict the transfer of securities and/or the exercise of voting rights

The core shareholders of KBC Group NV comprise KBC Ancora NV, its parent company Cera CV, MRBB BV, and a group of legal entities and individuals referred to as 'Other core shareholders'.

Based on the most recent notifications provided to KBC, their shareholdings are:

• KBC Ancora NV	77 516 380
• Cera CV	16 555 143
• MRBB BV	51 905 219
• Other core shareholders	28 247 408
• Total	174 224 150

(41.7% of total number of shares at 31 December 2024)

A shareholder agreement was concluded between these core shareholders that provides for a contractual shareholder syndicate. It sets out the rules for the syndicated shares, management of the syndicate, syndicate meetings, voting rights within the syndicate, preferential subscription rights in the event of the transfer of syndicated shares, withdrawal from the agreement, and duration of the agreement. Apart from a limited number of decisions, the syndicate meeting may take decisions by a two-thirds majority vote, on the understanding that none of the shareholder groups can block a decision. The agreement was extended for a ten-year period, with effect from 1 December 2024.

## 7 Rules governing the appointment and replacement of board members and the amendment of the Articles of Association of KBC Group NV

*Appointment and replacement of members of the Board:*  
Following the approval of or notification to the supervisory authority, proposals to appoint nominated directors or to reappoint directors are submitted by the Board to the General Meeting for approval. Each proposal is accompanied by a documented recommendation from the Board, based on the advice of the Nomination Committee. Without prejudice to the applicable legal provisions, nominations are communicated as a separate agenda item for the General Meeting at least thirty days before it is held. When nominating an independent director, the Board will state whether the individual meets the independence criteria set out in Article 7:87 of the CAC. The General Meeting appoints directors by a simple majority of votes cast. From among its non-executive members, the Board elects a chairman and one or more deputy chairmen, if necessary. In principle, outgoing directors are eligible for reappointment. If, during the course of a financial year, a directorship falls vacant as a result of decease, resignation, dismissal or for any other reason, the remaining directors may provisionally arrange for a replacement and appoint a new director. In that case, the next General Meeting will proceed to a definitive appointment.

*Amendment of the Articles of Association:*

The General Meeting is entitled to amend the Articles of Association. Accordingly, the General Meeting may only validly deliberate and take decisions about such amendments if they have been accurately proposed in the convening notice and if the shareholders present or represented at the meeting represent at least half the capital. If the latter condition is not satisfied, a second convening notice is required and the new meeting can validly deliberate and take decisions, regardless of the share of capital represented by the shareholders present or represented at the meeting. An amendment is only adopted if it receives three-quarters of the votes cast (Article 7:153 of the CAC).

If an amendment to the Articles of Association pertains to the object of the company, the Board must justify the proposed amendment in a detailed report that is referred to in the agenda. An amendment will then only be adopted if it receives at least four-fifths of the votes cast (Article 7:154 of the CAC).

## 8 Powers of the Board with regard to the issue and repurchase of treasury shares

The General Meeting authorised the Board until 22 May 2028 to increase, in one or more steps, the share capital in cash or in kind, by issuing shares. The Board is also authorised until the same date to decide on one or several occasions to issue convertible bonds (whether subordinated or otherwise) or warrants that may or may not be linked to bonds (whether subordinated or otherwise) that could result in capital being increased. This authorisation related to a sum of 146 000 000 euros, where the Board is entitled – in the company's interest – to suspend or restrict the preferential subscription rights of existing shareholders, and to a sum of 554 000 000 euros, without the Board having the power to suspend or restrict preferential subscription rights. On 6 November 2024, the Board decided to use its authorisation to increase capital by issuing shares with preferential subscription rights cancelled to employees. For more information, see 'Notes to the company annual accounts' in the 'Additional information' section.

The General Meeting of 5 May 2022 authorised the Board, for a period of four years calculated from the announcement of the resolution, to acquire a maximum of 10% of the KBC Group NV shares on Euronext Brussels or another regulated market at a price per share that may not exceed the last closing price on Euronext Brussels preceding the date of acquisition plus 10%, and that may not be lower than one euro. Under this authorisation, the Board acquired 20 980 823 shares in 2023 and 2024 (an aggregate 5.02% of the number of shares in circulation).

For information on KBC Group NV shares belonging to KBC Group NV and its subsidiaries, see Note 5.10 in the 'Consolidated financial statements' section.

## 9 Significant agreements to which KBC Group NV is a party and which take effect, alter or terminate upon a change of control of KBC Group NV following a public takeover bid

None.

## 10 Agreements between KBC and its directors or employees providing for compensation if the directors resign or are made redundant, or if employees are made redundant, without valid reason following a public takeover bid

None.

## Shareholder structure on 31 December 2024

Notifications of shareholdings are provided under the Act of 2 May 2007, under the Act on public takeover bids or on a voluntary basis. A summary containing the most recent disclosures is provided under 'Our business model' in the 'Report of the Board of Directors' section.

It should be noted that the figures provided below may differ from the current number of shares in possession, as a change in the number held does not always give rise to a new notification. The most recent shareholding update can be found under 'Our capital' in the 'Our business model' section.

### Shareholder structure based on notifications received under the Act of 2 May 2007 concerning the disclosure of significant participations in issuers whose shares are admitted to trading on a regulated market

Shareholder structure on 31 December 2024 (based on the most recent notifications received)	Address	Number of KBC shares/voting rights (as a % of the current number of shares/voting rights) <sup>1</sup>	Notification relating to
<b>Core shareholders<sup>1</sup></b>			
KBC Ancora NV	Muntstraat 1, 3000 Leuven, Belgium	77 516 380 / 18.56%	1 December 2024
Cera CV	Muntstraat 1, 3000 Leuven, Belgium	16 555 143 / 3.96%	1 December 2024
MRBB BV	Diestsevest 32/5b, 3000 Leuven, Belgium	51 905 219 / 12.43%	1 December 2024
Other core shareholders	C/o Ph. Vlerick, Ronsevaalstraat 2, 8510 Bellegem, Belgium	28 247 408 / 6.77%	1 December 2024
Other shareholders (≥ 3%)			
BlackRock, Inc.	50 Hudson Yards, New York, NY, 10001, United States	18 217 405 / 4.36%	1 October 2024
<b>Share buybacks<sup>2</sup></b>			
KBC Group NV	Havenlaan 2, 1080 Brussels, Belgium	20 942 766 / 5.02%	30 July 2024

<sup>1</sup> Includes the 'voting rights that may be acquired if the instrument is exercised' as stated under 'B) Equivalent financial instruments' in the transparency notification. Any shareholders falling below the 3% notification threshold are no longer included in the table (unless they are a core shareholder). KBC publishes these notifications on [www.kbc.com](http://www.kbc.com). The data regarding the core shareholders is sourced from the press release of 24 December 2024, which can also be viewed at [www.kbc.com](http://www.kbc.com).

<sup>2</sup> Following this notification, a limited number of treasury shares were repurchased. The total number of treasury shares repurchased is 20 980 823. The voting rights attached to these shares are suspended.

## Disclosures under Article 74 of the Belgian Act on public takeover bids

Within the framework of this law, KBC Group NV received a number of updated disclosures in August 2024. The entities and individuals referred to below act in concert.

### A Disclosures by (a) legal entities and (b) individuals holding 3% or more of securities carrying voting rights<sup>1</sup>

Shareholder	Shareholding (quantity)	% <sup>2</sup>	Shareholder	Shareholding (quantity)	% <sup>2</sup>

1 No such disclosures were received.

2 The calculation is based on the total number of shares on 31 December 2024.

The most recent shareholding update can be found under 'Our capital' in the 'Our business model' section.

## Remuneration report for financial year 2024

### Procedures for developing the remuneration policy and for determining the remuneration granted to individual directors and members of the ExCo

The remuneration policy for the Board and ExCo is based on prevailing legislation, the Corporate Governance Code and market data. It is monitored and regularly checked by the Remuneration Committee to see whether it complies with changes in the law, the Code, and prevailing market practices and trends. The Chairman of the Remuneration Committee informs the Board of the committee's activities and advises it of any changes to the remuneration policy and its implementation. The minutes of the meetings of the Remuneration Committee are provided to the Board for information purposes. The Board may also instruct the Remuneration Committee to examine potential changes to the remuneration policy and to advise it accordingly. If required by law, the Board will submit any policy changes to the General Meeting for approval.

The RCC assists the Board in drawing up a sound remuneration policy and also checks each year whether that policy is consistent with healthy and effective risk management, and whether or not the incentives in the system promote risks.

On the basis of advice obtained from the Remuneration Committee, the Board decides on proposals to change the remuneration package for its members and, where necessary, submits such proposals for approval at the General Meeting.

On the basis of advice obtained from the Remuneration Committee and taking account of the established remuneration policy, the Board determines the remuneration to be granted to members of the ExCo, and assesses this amount at regular intervals. The amount in question is split into a fixed component and a variable (profit-related/performance-related) component.

### Non-compliance with the Corporate Governance Code

- The Corporate Governance Code stipulates that members of the Board should receive a portion of their remuneration in the form of company shares as a way of encouraging them to act as long-term shareholders or, as phrased by the Corporate Governance Commission, to ensure that the directors have 'skin in the game'. While agreeing with the thinking behind it, the Remuneration Committee did not consider it expedient to follow this rule given KBC's specific shareholder structure, where – with the exception of the independent directors – all non-executive directors at KBC are representatives of the core shareholders. These core shareholders, by their very nature, are long-term shareholders who together hold more than 40% of KBC's

shares. So it is fairly safe to say there is 'skin in the game'. Adding a limited number of shares by means of their remuneration would, therefore, not have any impact whatsoever. Consequently, the Remuneration Committee believes it is not necessary to implement this rule to achieve the intended objective. The Board followed the advice of the committee.

- The Corporate Governance Code also stipulates that the Board should determine the minimum number of shares that members of the ExCo may hold in a personal capacity. The reasoning behind this position is to bring the interests of executive management into line with those of the shareholders and because it would contribute to sustainable value creation. In this regard, too, the Corporate Governance Commission reiterates the importance of having 'skin in the game'. Moreover, a positive correlation is believed to exist between shareholdings by senior management and future operating profit. The Remuneration Committee advised the Board not to implement this particular provision of the Code. The Board followed the advice of the committee based on the fact that the idea behind this provision and the positive impact of shareholdings by senior management are already deeply embedded in the current structure of the remuneration package currently in place for members of the ExCo. Not only is payment of 60% of their variable remuneration deferred over a period of five years, half of the variable remuneration is also paid in the form of phantom stocks. In other words, half of the variable remuneration is linked to the development of the value of the KBC share over a period of seven years following the year for which the variable remuneration was awarded. So we can safely conclude there is already quite some 'skin in the game'. Continuing good results and a positive share price performance are therefore as important to members of the ExCo as they are to the shareholders. The additional requirement of having members of the ExCo hold a package of KBC shares would make an overly large portion of their assets dependent on the KBC share price.

### General framework

The policy for remunerating members of the Board and the ExCo is published in the Remuneration Policy for the Board of Directors and Members of the Executive Committee, which the General Meeting approved by 73% of the votes on 2 May 2024.

The main principles for setting variable remuneration are set out below:

- Variable remuneration must always comprise a profit-related component (for the ExCo as a collective body) and a performance-related component (for individual achievements).
- 60% of variable remuneration awarded to members of the ExCo may not be paid straightaway but its payment is to be spread over a period of five years.
- Half of the total amount of variable remuneration is to be awarded in the form of equity-related instruments (phantom stocks or other instrument specified by a local regulator). This ensures that the size of the variable emolument partly depends on the longer-term effects of the policy pursued.
- No advance payments may be made in relation to the variable component and clawback/holdback provisions are in place.
- The variable remuneration may not exceed half of the fixed remuneration components.
- The criteria for assessing the performance of the ExCo member responsible for the risk function may not refer in any way to the results of the KBC group.
- Some of the criteria used for assessing the performance of members of the ExCo must always relate to risk. The sustainability policy is another element that is taken into account when setting variable remuneration.

## Clawback provisions

- Payment of the total annual variable remuneration is not only spread over time; half of it is also awarded in the form of phantom stocks that are subject to a retention period of one year (i.e. they are only converted into cash one year after being awarded). The variable remuneration component, including the deferred part, is only acquired when this can be reconciled with the financial situation of the entire institution and justified by the performances of the KBC group and the ExCo.
- Action can be taken regarding payment of deferred amounts that have still to be acquired (malus arrangement) in certain situations. In exceptional circumstances, some or all of the variable remuneration already awarded can also be clawed back, which is decided on by the Board on the advice of the Remuneration Committee.

## Remuneration awarded to non-executive directors

- The remuneration paid to non-executive directors consists of (i) an annual fixed component of 20 000 euros, which is non-performance-related and non-results-based (directors also sitting on the Board of KBC Bank and/or KBC Insurance receive an additional fixed remuneration of 10 000 euros for the work they perform in that regard), and (ii) the fee received for each meeting attended (5 000 euros) (if meetings coincide with Board meetings of KBC

Bank and/or KBC Insurance, the attendance fee will be paid just once to directors sitting on more than one of these Boards). Given his duties, the Deputy Chairman receives a higher fixed component (an additional 30 000 euros).

- In light of the considerable time he devotes to the ongoing supervision of KBC group affairs, the Chairman of the Board receives a different remuneration package that comprises solely a fixed component, which is set separately by the Remuneration Committee and approved by the Board. It amounts to 200 000 euros for the chairman of KBC Group NV and to 50 000 euros each for the chairmen of KBC Bank NV and KBC Insurance NV.
- The directors sitting on the AC and/or RCC receive an additional fixed emolument of 60 000 euros for the work they perform in that regard. Similarly, the emolument will be paid just once to directors also sitting on the AC or RCC of KBC Bank and/or KBC Insurance. The chairmen of the AC and RCC receive a higher fixed emolument (an additional 30 000 euros and 100 000 euros, respectively). Directors sitting on either the Nomination Committee or the Remuneration Committee do not receive additional remuneration for the work they perform in that regard.
- In light of the considerable time required for directors residing outside Belgium to attend Board meetings, additional remuneration (attendance fees) of 2 500 euros is paid to them for each meeting attended. This does not apply to meetings held virtually or to virtual attendance of in-person meetings.
- KBC Group NV does not grant loans to directors. Loans or guarantees may, however, be granted by KBC Group NV banking subsidiaries pursuant to Article 72 of the Banking Act, meaning that loans may be granted at terms applying to clients and approved by the Board.

## Individual remuneration awarded to non-executive directors of KBC Group NV

- The non-executive directors of KBC Group NV – and, where relevant, of other companies of the KBC group – received the amounts set out in the following table.
- The members of the ExCo who also sit on the Board as executive directors did not receive either a fixed remuneration or any attendance fees.

Remuneration per individual director (on a consolidated basis, in EUR)	Remuneration (for FY 2024)	Remuneration for AC and RCC members (for FY 2024)	Attendance fees (for FY 2024)	Total
Koenraad Debackere	300 000	-	-	300 000
Alain Bostoen	30 000	-	55 000	85 000
Eric Clinck	30 000	-	55 000	85 000
Sonja De Becker	40 000	60 000	55 000	155 000
Marc De Ceuster	65 000	90 000	61 250	216 250
Franky Depickere	65 000	160 000	61 250	286 250
Frank Donck	30 000	60 000	55 000	145 000
Liesbet Okkerse	40 000	-	55 000	95 000
Vladimira Papirnik (until 2 May 2024)	10 000	20 000	30 000	60 000
Alicia Reyes Revuelta	30 000	60 000	75 000	165 000
Diana Rádl Rogerová (from 2 May 2024)	20 000	40 000	52 500	112 500
Theodoros Roussis	30 000	-	50 000	80 000
Raf Sels	30 000	-	55 000	85 000
Philippe Vlerick	60 000	-	55 000	115 000

## Remuneration paid to the President and the other members of the ExCo

- The remuneration of individual ExCo members is made up of the following components:
  - A fixed monthly emolument;
  - A defined pension contribution in a defined contribution plan;
  - An annual, profit-related variable emolument (the amount of which depends on the performance of the ExCo as a whole and on the performance of the institution);
  - An annual, individual variable emolument based on the performance by each member of the ExCo and on the example they set in respecting the group's values;
  - Any emolument for offices performed on behalf of KBC Group NV (exceptional).
- A quantitative risk-adjustment mechanism – the 'risk gateway' – is used to set the variable remuneration. It

comprises a number of capital and liquidity parameters that have to be met before the variable remuneration component may be awarded. The parameters are set each year by the Board. If one of these parameters is not met, no variable remuneration will be awarded for that year.

- For members of the ExCo, the **individual variable component** is set on the basis of an assessment of the performance of the member in question. The Remuneration Committee broadly assesses each member of the ExCo against the aspects of our corporate culture and the aspect of being *Respectful* as a core value for the entire KBC organisation. On the basis of this assessment, the Remuneration Committee proposes a percentage between 0 and 100% to the Board. The Board then decides on this final score, which ultimately determines the size of the individual variable emolument.

### Criteria for awarding members of the ExCo the individual variable remuneration component

#### Explanation\*

Performance	We strive for excellent results and do what we promise to do.
Empowerment	We offer every employee the chance to develop their creativity and talent.
Accountability	We meet our personal responsibility towards our clients, colleagues, shareholders and society.
Responsiveness	We anticipate and respond proactively to the questions, suggestions, contributions and efforts of our clients, colleagues and management.
Local Embeddedness and group-wide cooperation	We view the diversity of our teams and of our clients in the different core markets as a strength and we stay close to our clients.
Respectful	We treat people as our equals, we are transparent, we trust them and appreciate them for what they do and who they are.

\* See 'What makes us who we are?'

- On the advice of the Remuneration Committee, the Board sets the **collective profit-related variable component** on the basis of an assessment of a number of pre-agreed criteria relating to the performances of the ExCo and the company (see table). These criteria are centred on four broad areas, viz. implementing strategy, realising financial plans, strengthening the risk control environment, and the satisfaction of all stakeholders. The performance of the ExCo in each of these four areas determines the size of this variable remuneration component, with each area accounting for 40%, 20%, 20% and 20%, respectively (the breakdown was 25%/25%/25%/25% up to and including 2023; the Board decided to increase the share of the

strategy component to highlight the importance of the Ecosphere strategy and the increase in the number of bank-insurance clients). The assessment of these criteria is reflected in a percentage between 0% and 100% that is applied to the maximum profit-related variable emolument. The size of the variable emolument, therefore, depends to a small extent on achieving financial results. Other aspects such as risk management and stakeholder management are equally important in this regard. And, as it determines at least 30% of the profit-related variable emolument, sustainability is also an increasingly important factor.

#### **Criteria for awarding members of the ExCo the profit-related variable remuneration component**

<b>Criteria for awarding members of the ExCo the profit-related variable remuneration component</b>	<b>Explanation</b>	<b>Weighting*</b>
Implementing strategy	Besides achieving any specific targets, the main focus is on what has been achieved in terms of client centricity, sustainability and innovation. In 2024, this primarily involved further progress in the implementation of the Ecosphere strategy (including Kate and Kate coins), qualitative and quantitative progress made in the area of bank-insurance clients, digital sales and STP (straight-through processing), the implementation of the Temenos platform, and progress, both qualitative and quantitative, on key sustainability indicators.	40%
Realising financial plans	Comprises a number of financial parameters (return, profit, capital, and cost of credit) and assessment of the progress made in terms of income diversification.	20%
Strengthening the risk control environment	Assessed based on liquidity, capital and funding criteria, implementing recommendations made by Audit and the regulator, and the degree to which the internal control environment, including compliance, has improved. In 2024, we continued to focus on cyber risks and the further implementation of AML and GDPR strategy. In addition to enhancing the risk control environment, many of these criteria also contribute to strengthening the company's good governance and to encouraging responsible conduct.	20%
Stakeholder satisfaction	Assessed based on results from client and employee satisfaction surveys and on progress made in terms of sustainability. A sustainability dashboard that contains numerous parameters is used for measuring sustainability in a range of areas, including our banking and insurance activities (e.g., the share of renewable energy loans in the loan portfolio and phasing out financing of the coal sector), our role in society (e.g., our own ecological footprint), sustainable growth (e.g., managing risk and creating long-term value), reputation and HR policy, etc.	20%

\* For the variable remuneration of the CRO, the realisation of financial plans is not taken into account, but the relative weighting of risk-related criteria is doubled.

- The variable remuneration of the members of the ExCo is not only based on the results of a single financial year, but also considers the long-term impact. This is embedded in the structure of the payment of the variable remuneration:
  - Half of the remuneration is linked to the development of the price of the KBC share over a period of seven years following the performance year (by distributing phantom stocks);
  - 60% of the variable remuneration is not paid immediately, but is spread over a period of six years following the performance year. Events that have a material negative impact on KBC's results or reputation may give rise to non-payment or reduced payment of the variable remuneration.

- Members also benefit from a retirement and survivor's pension scheme, which comprises a supplementary retirement pension or – if the insured dies while still in employment and leaves a spouse – a survivor's pension (and, where applicable, an orphan's pension), and also provides cover in the event of disability.

## Provisions concerning severance payments for executive directors and members of the ExCo of KBC Group NV

- In compliance with legal and regulatory limits, for members of the ExCo who have worked six years or less, such payments have been set at 12 months' remuneration, for those who have worked between six and nine years, they are equal to 15 months' remuneration, and for those who have worked more than nine years, they are equal to 18 months' remuneration. In this context, remuneration is taken to be the fixed remuneration component for the current year and the variable component for the last full year preceding termination of office.

## Relative importance of the different components of remuneration

- The variable component is split into a collective profit-related variable emolument and an individual variable emolument. For 2024,
  - a maximum of 729 682 euros applies for the profit-related variable component for the President of the ExCo and a maximum of 386 696 euros for the individual variable component;
  - the limits for these components are 327 910 and 147 355 euros, respectively, for the other members of the ExCo.
- The final amount is set by the Board on the advice of the Remuneration Committee, based on an assessment of the individual and collective achievements during the previous financial year.

## Characteristics of performance-related bonuses in the form of shares, options, or any other rights to acquire shares

- The total amount of annual variable remuneration (i.e. both the profit-related and individual components) for members of the ExCo is paid over a period of six years, with 40% being paid in the first year and the rest spread equally over the next five years.
- Payment of these deferred amounts is subject to the clawback provisions outlined above.
- Of the total annual variable remuneration, 50% is awarded in the form of equity-related instruments called phantom stocks, the value of which is linked to the price of the KBC Group NV share (though not in the Czech Republic, where a specific non-cash instrument is used whose value changes in lockstep with ČSOB's results and the underlying factors determining the value of the phantom stocks). These stocks must be retained for one year after being allocated. The period over which they are allocated is also six years. The average price of the KBC share during the first three months of the year is used to calculate the number of

phantom stocks to which each member of the ExCo is entitled. These stocks are then converted into cash a year later on the basis of the average price of the KBC share during the first three months of that year. They are subject to the allocation and acquisition conditions described under 'Clawback provisions'.

## Pension arrangements, disability cover and death cover

- The members of the ExCo have a separate defined contribution plan that is funded entirely by KBC. When drawing up this plan, account was taken of the fact that the career of a member of the ExCo is shorter than that of an average employee. In the pension formula, therefore, the first ten years that an individual sits on the ExCo are the ones in which a significant part of the supplementary pension is built up. The contribution that KBC makes to the pension plan amounts to 32% of the fixed emolument during those first ten years, 7% for the next five years and 3% starting from the sixteenth year of plan membership. A minimum return of 0% (capped at 8.25%) is guaranteed on the contributions. During the first ten years, the size of the payment made into the pension fund is rather large, but declines to a fraction of what it had been previously starting from the eleventh year and even more markedly from the sixteenth year.
- The plan applies to all members of the ExCo who are resident in Belgium. Similar cover is provided for the other members of the ExCo under an insurance contract.
- The pension plan includes a death benefit, which equals four times the amount of the fixed emolument (or, if higher, the reserves that have been built at the time of death). Where applicable, there is also an orphan's pension, comprising a one-off benefit of 239 670 euros and an annuity of 7 773 euros per year.
- The invalidity benefit provided under the plan amounts to 923 021 euros per year.

## Fixed and variable remuneration for 2024

- Figures for the fixed and variable remuneration components are given in the table.
- The Board decided that the members of the ExCo should be awarded collective profit-related variable remuneration for 2024 that equalled 97.6% of the maximum amount (97.1% for the CRO). Despite our very strong performance in 2024, the score is slightly below the level of 2023. The strategy target carries more weight this year (40%, compared to 25% in 2023), which explains the year-on-year development.

2024 score	Explanation	Score decided on
A Implementing strategy	Substantial progress was made with implementing the 'S.T.E.M., the Ecosphere' strategy. All countries follow the roadmap to achieve their targets. Significant progress was made again in the area of sustainability. We are on track to meet the 2030 targets, although we have noticed that the target for the share of green property loans (and the corresponding share of green insurance policies) remains a challenge, especially because of a lack of data (e.g., a lack of EPC information) and a lack of government support. More and more processes are entirely 'straight-through', which also makes them scalable. The same holds true for sales through our digital channels, where we are also on target. However, the ambitious targets for bank-insurance clients were insufficiently achieved.	96.9%
B Realising financial plans	The financial targets were met or exceeded, leading to very strong results.	100%
C Strengthening the risk control environment	The majority of the KPIs were met (audit recommendations, liquidity, funding and capital planning, level of operating losses, etc.). Substantial efforts and significant progress were again made in a few areas, such as data quality, GDPR and anti-money laundering issues. In terms of data quality, processes are now under control. There is still room for improvement in terms of GDPR and anti-money laundering issues, which is partly due to ever-growing expectations of supervisory authorities. All criteria related to the group's good governance practices were met. This also contributes to responsible behaviour throughout the group, an important cornerstone of our sustainability strategy.	97.8%
D Stakeholder satisfaction	The already high level of employee satisfaction increased slightly further. Our sustainability performance has remained strong, as the sustainability report also shows. KBC continues to be recognised as a frontrunner in this area in the financial sector, which among other things resulted in confirmation of the excellent sustainability ratings. Virtually all KBC entities met their NPS target as well as their reputation targets. Employee satisfaction, NPS scores and reputation also benefit from good governance and responsible behaviour, to which considerable attention is paid.	96.3%
Total weighted score (percentage that is applied to the maximum profit-related variable emolument)	DC members excl. CRO $((96.9 \times 40\%) + (100 \times 20\%) + (97.8 \times 20\%) + (96.3 \times 20\%))$ CRO $((96.9 \times 40\%) + (100 \times 0\%) + (97.8 \times 40\%) + (96.3 \times 20\%))$	97.6% 97.1%

- Half of the variable remuneration component is paid in cash and the other half is awarded in the form of phantom stocks. As regards the cash component, 40% will be paid in 2025 and the remaining 60% spread equally over the next five years (2026 to 2030, inclusive). The amounts awarded are included in the table below.
- Phantom stocks for 2024: The number of phantom stocks is calculated on the basis of the average price of the KBC

share during the first quarter of 2025. Like the other variable components, 40% will be awarded in 2025 and the remaining 60% spread equally over the next five years. Given that phantom stocks are to be retained for one year, they are paid out in cash one year after being awarded, which means that payment is spread over 2026 to 2031, inclusive. The amounts for which phantom stocks were awarded in this way for 2024 are given in the table below:

Amounts awarded in the form of phantom stocks (in EUR)	Total	Vesting in 2025	Vesting in 2026	Vesting in 2027	Vesting in 2028	Vesting in 2029	Vesting in 2030
Johan Thijss	545 444	218 178	65 453	65 453	65 453	65 453	65 453
Erik Luts	227 749	91 099	27 330	27 330	27 330	27 330	27 330
Luc Popelier <sup>1</sup>	148 394	59 358	17 807	17 807	17 807	17 807	17 807
Christine Van Rijssaghem	223 354	89 342	26 803	26 803	26 803	26 803	26 803
David Moucheron	224 802	89 921	26 976	26 976	26 976	26 976	26 976
Peter Andronov	228 486	91 394	27 418	27 418	27 418	27 418	27 418
Aleš Blažek <sup>2</sup>	136 160	54 464	16 339	16 339	16 339	16 339	16 339
Bartel Puelinckx <sup>1</sup>	72 969	29 188	8 756	8 756	8 756	8 756	8 756

1 Luc Popelier, ExCo member until 1 September 2024; Bartel Puelinckx succeeded him on 1 September 2024. Fees are pro rata temporis.

2 Specific instruments in the Czech Republic, as set out above.

## Variable remuneration relating to previous years

- A portion of the (deferred) variable remuneration component awarded for 2019–2023 will be paid in 2025.
- A portion of the phantom stocks awarded for 2018–2022 was converted into cash at 63.22 euros per share in April 2024.
- The amounts paid are given in the table.

## Severance payments in 2024

- None.

## Other benefits

- Each member of the ExCo has a company car, the personal use of which is charged in accordance with the prevailing regulations. Other benefits which members of the ExCo receive include hospitalisation insurance, assistance insurance and accident insurance. The value of these benefits is given in the table. These figures do not include the flat-rate expenses allowance of 335 euros which each member of the ExCo receives each month.

## Overview

- The tables below show the remuneration paid to a) the former members of the ExCo and b) the current members of the ExCo. Employment status of the members of the ExCo: self-employed.

a) Remuneration paid to former members of the ExCo of KBC Group NV, 2024	Luc Gijssens	Daniel Falque	Hendrik Scheerlinck	John Hollows	Luc Popelier (ExCo member until 1 September 2024)

					79/21	76/24	85/15
						77/23	94/6
						76/24	79/21

<sup>1</sup> The net remuneration paid to Aleš Blažek is the same as that for the other members of the ExCo.

<sup>2</sup> The pension contribution also includes death cover and disability cover.

<sup>3</sup> Includes 146 589 euros as compensation for the tax and social security contributions due in the Czech Republic on premiums paid.

## Top management remuneration in perspective

- To put developments in the remuneration of top management in perspective, we have provided an overview of the total remuneration earned by the current members of the ExCo, the average salary of KBC Group NV

employees (in FTE), the lowest salary of a KBC Group NV employee (in FTE) and certain indicators of KBC's performance.

- The remuneration awarded to non-executive directors has not been included in the overview due to the fact that it has remained unchanged during the past five years.

Top management remuneration in perspective	2020	2021	(year-on-year change)	2022	(year-on-year change)	2023	(year-on-year change)	2024	(year-on-year change)
Remuneration of ExCo members (in EUR)									
Johan Thijs	2 245 548	2 421 147	+8%	3 067 231	+27%	3 620 237	+18%	4 107 170	+13%
Peter Andronov	–	1 506 087 (12/12)	–	1 602 089	+6%	1 720 579	+7%	1 775 433	+3%
Aleš Blažek	–	–	–	1 111 584 (12/12)	–	1 202 965	+8%	1 411 951	+17% <sup>1</sup>
Erik Luts	1 426 805	1 534 287	+8%	1 643 993	+7%	1 793 078	+9%	1 837 225	+2%
David Moucheron	–	1 520 236 (12/12)	–	1 627 611	+7%	1 779 555	+9%	1 875 369	+5%
Luc Popelier/Bartel Puelinckx	–	–	–	–	–	–	–	1 862 536	–
Christine Van Rijsseghem	1 424 458	1 529 211	+7%	1 632 959	+7%	1 779 830	+9%	1 851 271	+4%
Average (excluding CEO <sup>2</sup> )	1 422 900	1 522 517	+7%	1 541 991	+7%	1 677 673	+9%	1 768 964	+5%
Average salary of Belgian employees of KBC Group NV (in EUR)									
Average salary	92 124	94 312	+2%	109 106	+16% <sup>3</sup>	112 376	+3%	114 578	+2%
Lowest salary	46 448	47 767	+3%	53 559	+12%	54 704	+2%	55 457	+1%
Ratio of highest to lowest salary	1/48	1/51		1/57		1/66		1/73	
Performance indicators									
Group's net result (in millions of EUR)	1 440	2 614	+82%	2 818 <sup>4</sup>	+5%	3 402	+21%	3 415	+0%
Group's total income (in millions of EUR)	7 195	7 558	+5%	10 035 <sup>4</sup>	+12%	11 224	+12%	11 167	-1%
Own greenhouse gas emissions (in tonnes of CO <sub>2</sub> per FTE)	1.54	1.02	-34%	1.49 <sup>5</sup>	–	1.48	-1%	1.46	-1%
Volume of responsible investment funds (in billions of EUR)	16.8	31.7	+89%	32.3	+2%	40.7	+26%	50.8	+25%
Common equity ratio (fully loaded)	17.6%	15.5%	-12%	15.3%	-1%	15.2%	-0%	15.0%	-1%

<sup>1</sup> The increase is largely driven by compensation for the tax and social security contributions due in the Czech Republic on premiums paid (pension contribution).

<sup>2</sup> This calculation was based on the ExCo's composition at the time.

<sup>3</sup> The increase was impacted by the separation of KBC Global Services.

<sup>4</sup> According to IFRS 17. Percentage increase from 2021 without considering IFRS 17.

<sup>5</sup> Recalculated based on the disposal of KBC Ireland and the inclusion of the private use of our own or KBC-managed vehicle fleet.

## Remuneration from 2025

- No changes to the remuneration package for ExCo members are currently planned.

# Sustainability statement

## General information

General

Environment

Social

Governance

A number of terms have been abbreviated as follows in this section of the annual report:

Abbreviation	Term
AC	Audit Committee
Board	Board of Directors
CSRD	Corporate Sustainability Reporting Directive
DCM	Direct Client Money
DDA	Disclosure Delegated Act
ERIM	Environmental Risk Impact Map
ESB	External Sustainability Board
ESG	Environmental, Social and Governance
ESRS	European Sustainability Reporting Standards
ExCo	Executive Committee
FTE	Full-Time Equivalent
GHG	GreenHouse Gases
ISB	Internal Sustainability Board
KPI	Key Performance Indicator
NAPP	New and Active Product Process
NC	Nomination Committee
OECD	Organisation for Economic Co-operation and Development
ORSA	Own Risk and Solvency Assessment
PACTA	Paris Agreement Capital Transition Assessment
PCAF	Partnership for Carbon Accounting Financials
RC	Remuneration Committee
RCC	Risk and Compliance Committee
RI	Responsible Investing

## Basis for preparation (1.1)

### General basis for preparation of sustainability statements (1.1.1)

The KBC Group Sustainability Statement has been prepared on a consolidated basis, in accordance with the scope applied in the preparation of the consolidated financial statements (we refer to Note 6.5 of the 'Consolidated financial statements' in this report for more information).

The following consolidated subsidiaries are exempted from publishing an individual or consolidated Sustainability Statement:

Exempted KBC subsidiaries	Registered office	Activity
CBC Banque SA	Namur - BE	Credit institution
Československá Obchodní Banka a.s.	Prague - CZ	Credit institution
K&H Bank Zrt.	Budapest - HU	Credit institution
United Bulgarian Bank AD	Sofia - BG	Credit institution
KBC Insurance NV	Leuven - BE	Insurance undertaking
ČSOB Pojišt'ovna a.s.	Pardubice - CZ	Insurance undertaking

In addition to information on own operations, we have also included material impacts, risks and opportunities related to our upstream and downstream value chain, following the outcome of our due diligence process and of our double materiality assessment.

We did not use the option to omit a specific piece of information corresponding to intellectual property, know-how or the results of innovation that would qualify as a trade secret. Nor did we use the exemption that allows us to decide, in exceptional cases, to omit information relating to impending developments or matters in the course of negotiation, where the disclosure of such information would be seriously prejudicial to the commercial position of the group and provided that such omission does not prevent a fair and balanced understanding of the group's development, performance, and position, and the impact of its activity.

### Disclosures in relation to specific circumstances (1.1.2)

#### Deviating time horizons

In the context of the double materiality assessment (see section 1.4.1), different time intervals as opposed to those defined in the ESRS were applied to determine the financial materiality of the risks, as these are also used in our ESG risk management and decision-making processes:

- For the short-term risk assessment, we used a 0- to 3-year time horizon, differing from the ESRS' 1-year period aligned with the reporting period in the financial statements;
- For the medium-term risk assessment, we applied a 3- to 10-year time horizon, while the ESRS consider up to 5 years;
- For the long-term risk assessment, we used a time horizon of beyond 10 years, in contrast to the ESRS' beyond-5-year approach.

Please note that the time horizons prescribed by the CSRD were used to determine the impact materiality and financial materiality of the opportunities.

#### Sources of estimation and outcome uncertainty

Some of the metrics we disclose are subject to measurement uncertainty. In most of the cases the source for this uncertainty is linked with data availability and/or quality. In the table below we present an overview of the metrics and quantitative amounts in this Sustainability Statement that are subject to a high level of measurement uncertainty, along with the source of that uncertainty and the assumptions, approximations and judgements used when measuring the amount. For value chain information where we used indirect sources (such as sector averages or other proxies), we give further information on the embedded level of accuracy, and we describe planned actions related to the accuracy of our data in the future, if any.

#### Metrics subject to measurement uncertainty

Metric	Source of uncertainty	Assumptions, approximations and judgements used
GHG emissions	Data availability	We measure our GHG emissions at situation date 30 September 2024, which serves as an approximation for our emissions as at 31 December 2024. Given relative portfolio stability, this is considered to give a sufficient level of accuracy for the reader. We are taking action to shift the situation date of the emissions to 31 December in the future.
GHG emissions – Scope 1	Data availability	In some cases, the information on Net Calorific Value is not available and is approximated by the Gross Calorific Value, which results in a (slight) overestimation.
GHG emissions – Scope 2	Data availability	For some company-owned electric vehicles, we do not have the information on the kWh charged outside the company premises. In these cases we use distance as a proxy, which leads to a limited overestimation of our emissions.
GHG emissions – Scope 3 – lending	Data availability/quality	For financed emissions associated with our lending activities, we use the PCAF global standard. As part of the standard we assign quality scores which reflect the quality level of the underlying emission data used and the subsequent calculation quality. The weaker the quality score, the higher the level of uncertainty. Proxies / sector-average emission factors are used for some parts of the financed emissions. We refer to section 2.2.3.2 for more information on the quality scores, which reflect the level of accuracy.
GHG emissions – Scope 3 – asset management activities, sovereign bond portfolio of KBC Bank and own investments insurance	Data availability/quality	We use emissions data from an external data provider. This data is based on direct information from the undertakings, but in case of lack of data, the data provider adds estimations.
GHG emissions – Scope 3 – insurance-associated emissions	Data availability	For our insurance-associated emissions we use the PCAF global standard Part C, which currently covers personal motor lines and commercial lines (we only report on insurance-related emissions from our largest business unit (Belgium)). For Private Vehicles we use exact data of the types of vehicles we insure wherever possible, but when this is not available, we approximate by using country-specific proxies. For our commercial lines portfolio, all emissions are calculated using the PCAF emission factor database.
Internal carbon price	Measurement technique	Internal carbon price levels are based on climate scenarios. As these scenarios outline potential future plausible transition pathways, they are not to be mistaken with forecasts. By definition, this creates a level of uncertainty in our internal carbon price measurements. We refer to section 2.2.3.4 for more information.

## Incorporation by reference

The following Disclosure Requirements and/or datapoints have been incorporated by reference:

- For the disclosure of ESRS 2 GOV-1 (section 1.2.1) paragraph 21 (c), we refer to the 'Corporate Governance Statement' section and more specifically to the respective paragraphs on the composition of the Board and its committees, the Group ExCo, AC, RCC, RC and the NC.
- For the disclosure of ESRS 2 GOV-3 (section 1.2.3) paragraph 29, we refer to the 'Corporate Governance Statement' section (Remuneration Report).

Disclosures about our (ESG-related) risk management practices are included throughout this Sustainability Statement. All necessary information required by the ESRS is incorporated in this Statement through a high-level explanation on how our risk management is performed. For more detailed information, we refer to the KBC Risk Report (not subject to external assurance), available at [www.kbc.com](http://www.kbc.com).

## Governance (1.2)

### Role of the administrative, management and supervisory bodies (1.2.1)

#### Composition and diversity of members

In the table below, we show the composition and diversity of the members in the administrative, management and supervisory bodies. The bodies included are the ExCo, the RCC, the AC, the NC, the RC and the Board.

**Composition and diversity of the Board and its committees and the ExCo, 31-12-2024**

	ExCo	RCC	AC	NC	RC	Board
Number of executive members	7	0	0	0	0	3
Number of non-executive members	-	5	3	5	3	13
of which number of independent members	-	2	2	2	2	3
Number of years on the body						
0-2 / 3-10 / more than 10 years	2 / 3 / 2 members	-	-	-	-	5 / 4 / 7 members
Average number of years	6 years	-	-	-	-	9 years
Representation of employees and other workers	0	0	0	0	0	0
Age						
41-50 / 51-60 / older than 60 years of age	0 / 5 / 2 members	-	-	-	-	1 / 8 / 7 members
Average age	57 years of age	-	-	-	-	59 years of age
Gender	1 woman / 6 men	3 women / 2 men	2 women / 1 man	2 women / 3 men	1 woman / 2 men	5 women / 11 men
Nationality	5 Belgian, 1 Czech, 1 Bulgarian	3 Belgian, 1 Spanish, 1 Czech	1 Belgian, 1 Spanish, 1 Czech	4 Belgian, 1 Czech	2 Belgian, 1 Spanish	14 Belgian, 1 Spanish, 1 Czech
Qualifications*	law 29%, economics/finance 29%, MBA 14%, actuarial sciences/insurance 14%, other 14%	-	-	-	-	law 25%, economics/finance 31%, MBA 17%, actuarial sciences/insurance 6%, other 19%

\* Rough percentage breakdown based on all qualifications (various individuals have more than one degree)

On the basis of the profiles and competences of the members in the aforementioned bodies, we conclude that all these bodies possess the required skills and experience in accordance with our Corporate Governance Charter. For more information on the experience of the individual members in each body, we refer to the Corporate Governance Statement.

### **Responsibilities of the bodies regarding the management of impacts, risks and opportunities**

As part of the overall strategy of the group, KBC's sustainability strategy is set by the Board. The Board further defines the group's risk appetite taking into account ESG-related risks and decides on the corporate sustainability policies. As the highest-level supervisory body, it oversees the implementation and progress of the sustainability strategy. Oversight of the Board covers ESG-related themes in the broad sense, including climate and other environmental topics, gender diversity and human rights, but also business conduct topics such as ethical behaviour and integrity. Important changes to sustainability policies and sustainability-related reporting are discussed at Board level, when required. Furthermore, the ExCo has defined climate and environmental risk, cyber risk, compliance risk and conduct risk as top risks for KBC. These risks are also closely monitored by the RCC and the Board.

The ExCo is tasked with the operational management of ESG-related matters. This responsibility includes making proposals to the Board on the sustainability strategy and policies as well as monitoring the groupwide implementation thereof. The role of the ExCo further includes assessing ESG impacts, risks and opportunities. They are responsible for internal control measures for impacts and risks as well as for pursuing opportunities within the confines of KBC's overarching strategy as set by the Board. The AC ensures that the ExCo establishes adequate and effective internal control measures and monitors KBC's sustainability reporting processes.

The aforementioned responsibilities for impacts, risks and opportunities of each of the bodies are outlined in our Corporate Governance Charter.

The ExCo has granted decision-making power on both operational and strategical ESG-related issues to other relevant committees and top management positions. The ISB serves as the principal forum at KBC for discussion of ESG-related issues. All ExCo members are either members of or represented on the ISB. In 2024, the ISB met nine times. The members of the ISB are responsible for communicating on sustainability matters within their respective business lines and countries, for creating a support and sponsorship base and for making the group's sustainability strategy work.

Other core components of our sustainability governance include the Sustainability department at group level and the Sustainability departments at local level, as well as several other sustainability committees. The risk function is actively represented in the internal bodies and (sustainability) committees, both at group and local level. The management of ESG-related risks is fully embedded in the existing risk management governance, including the 'Three Lines of Defence Model' (as explained in the 'How do we manage our risks?' section). On top of that, we also have two external boards. The ESB advises Group Corporate Sustainability on sustainability policies and strategy, whereas the RI Advisory Board oversees the screening of the responsible nature of our RI funds.

All ESG-related targets are reviewed and approved by the ExCo and endorsed by the Board. Twice a year, the Board reviews a comprehensive overview of all sustainability-related domains and (climate) targets by means of the KBC Sustainability Dashboard. This dashboard provides measurable and verifiable parameters related to the key themes and actions of our sustainability strategy. Progress on the different objectives affects the variable remuneration of the members of the ExCo, as described in section 1.2.3.

Additionally, specific climate-related Key Risk Indicators are monitored via a Climate Risk Dashboard, which is reported to the ExCo and the Board on a semi-annual basis, as part of the Integrated Risk Report.

The following figure depicts an overview of our sustainability governance, including the role of and reporting lines to the different bodies.

## Sustainability governance

**Board of Directors:** sets the sustainability strategy and oversees the implementation thereof by the ExCo. This includes our policy on climate change, as well as other relevant sustainability issues such as gender diversity. Since climate-related and environmental risks have been classified as a top risk, the RCC monitors sustainability risks closely. The Board evaluates the implementation of the sustainability strategy using a Sustainability Dashboard and expresses its opinion on major changes to sustainability policies. The AC monitors the sustainability reporting process.

**Executive Committee:** is responsible for the implementation of the sustainability strategy, including the policy on climate change. It ratifies the decisions of the ISB and the Sustainable Finance Steering Committee.

**Internal Sustainability Board:** serves as the principal forum at KBC for the discussion of overall ESG-related issues. The Board is chaired by the Group CEO and includes the Group CFO as the vice-chairman. It is furthermore composed of executive and top management representatives of all our business units, core countries and group services. The ISB operates in close partnership with the Group Corporate Sustainability division and the Senior General Manager of Group Corporate Sustainability, who is also a member of the ISB.

**Group Corporate Sustainability:** responsible for developing, implementing and supervising the sustainability strategy. The team reports to the ISB on the implementation of the strategy and prepares the KBC Sustainability Dashboard. The department is led by the Senior General Manager of Group Corporate Sustainability, who reports directly to the Group CEO.

**Sustainable Finance Steering Committee:** supervises the Sustainable Finance Programme, which specifically focuses on KBC's approach to climate action and other environmental themes such as biodiversity, water and circularity. The committee is chaired by the CFO. It reports to the ExCo and the Board and maintains contact with the ISB.

**CSRD Steering Committee:** supervises the conceptualisation and implementation of our CSRD programme.

**Data and Metrics Steering Committee:** manages the challenges relating to sustainability-related data collection and reporting.

**Country Sustainability General Managers:** bear ultimate responsibility for all matters pertaining to sustainability in their country. They are part of top management. They are responsible for communication on sustainability in every country and for the integration of the sustainability strategy. They are part of the local country organisation and, therefore, are subject to hierarchical reporting. As they work closely with both the local ISB representative and Group Corporate Sustainability, they also come under the functional responsibility of the Senior General Manager of Group Corporate Sustainability.

**The Sustainability departments and committees in each core country:** are organised in such a way as to support their senior managers, who sit on the Internal Sustainability Board, and the General Manager of Sustainability in integrating our sustainability strategy and organising and communicating local sustainability initiatives. Among other things, the employees and committees involved also supply and validate non-financial information.

**External Sustainability Board:** consists chiefly of sustainability experts from the academic world and advises Group Corporate Sustainability on sustainability policy and strategy.

### **Expertise and skills on sustainability matters**

The collective suitability matrix, which is used to assess the skills and expertise of the Board and ExCo as a whole, explicitly includes sustainability matters. The suitability assessment covers the capability to understand and critically assess climate-related and environmental risks, cybersecurity and business conduct risks (including money laundering and financing terrorism risks), as well as the capability to critically assess risk, audit and compliance reports and the functioning of the risk, audit and compliance functions. Furthermore, (new) members' expertise in societal issues is also assessed. The outcome of this assessment indicates whether the members of the Board and ExCo have sufficient or in-depth knowledge of the selected matters. Where necessary, members are required to develop their expertise. Hence, by means of the collective suitability matrix, KBC ensures that the Board and ExCo have the necessary skills and expertise to fulfil their role, including the supervision of sustainability matters.

All new Board members follow an onboarding programme, which includes a meeting with the Senior General Manager of Group Corporate Sustainability. During this meeting, the most important sustainability matters for KBC are explained and discussed based on our Sustainability Report and the KBC Sustainability Dashboard. Additionally, sustainability topics are part of the training programme that we provide for the Board and the ExCo. Members of the ExCo and the Board also consult on ESG issues with internal subject matter experts on an ad hoc basis as well as with external experts (e.g., the ESB).

### **Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies (1.2.2)**

As mentioned above, twice a year the KBC Sustainability Dashboard is presented to the ISB, ExCo and the Board. The dashboard is presented by the Senior General Manager of Group Corporate Sustainability. Furthermore, the Board and the ExCo review the corporate sustainability strategy, progress on the Sustainable Finance Programme and our external sustainability reports on a regular basis.

The Senior General Manager of Human Resources (HR) regularly reports to the ExCo on different HR topics. This includes matters such as headcount evolution, external hiring and appointments, performance and appraisals, results of our employee engagement survey, and training. Every year, a specific report on diversity and inclusion is also presented to the ExCo. Once per year other selected topics (e.g., succession management) within the remit of the HR function are reported to the ExCo and the Board.

ESG risks are firmly integrated into KBC's Risk Management Framework and risk management governance. The ExCo, the RCC and the Board are the prime recipients of various outputs of our main risk management processes. For example, an Integrated Risk Report is presented to the Board, Exco and RCC eight times per year, and regularly includes ESG-related topics (including a Climate Risk Dashboard). Consistently, the RCC provides advice to the Board on risk management matters within the Board's responsibility. As part of its responsibility to manage ESG-related risks, the ExCo is supported and regularly informed by other committees such as the Group Lending Committee for credit-related topics, the Asset/Liability Committee for balance sheet management, etc.

In addition, the ExCo and the RCC are advised on a quarterly basis on compliance matters, whereas the Board is updated annually on compliance activities and the management of compliance risks including those related to ESG. This is done through consolidated reports prepared by our Compliance department. The reports cover breaches, if any, and remedial actions taken by management.

As described in section 1.4.1, as part of our double materiality assessment, we have impacts, risks and opportunities (IROs) linked to ESG matters. For a brief overview of our material IROs related to the different sustainability matters, we refer to section 1.3.3.1. The table below lists the material sustainability matters addressed by the governance bodies in 2024.

#### **Material sustainability matters addressed by the governance bodies in 2024**

		<b>ExCo</b>	<b>RCC</b>	<b>AC</b>	<b>Board</b>
Climate change	Climate change mitigation				
	Energy				
	Climate change adaptation				
Water and marine resources					
Biodiversity and ecosystems					
Own workforce	Working conditions				
	Equal treatment and opportunities for all				
	Other (privacy)				
Consumers and end-users	Information-related (including cybersecurity)				
	Social inclusion				
Business conduct	Business ethics and corporate culture				
	Relationship with suppliers				

#### **Integration of sustainability-related performance in incentive schemes (1.2.3)**

Our management bodies have an important role in the implementation of our sustainability strategy. Elements such as sustainability are becoming increasingly important and today determine at least 30% of the collective, variable, results-related remuneration component that is awarded to the members of the ExCo. The three cornerstones of our sustainability strategy are properly reflected to incentivise our management bodies to limit our negative impact on society, to increase our positive impact and to encourage responsible behaviour among all staff members. Hence, the variable remuneration focuses on enabling the transition to a sustainable future, on good governance, on responsible behaviour and on providing sustainable solutions to our clients. Besides GHG emissions reduction targets (see section 2.2.3.1), there are other qualitative sustainability-related targets. Moreover, sustainability-related matters and metrics are taken into consideration in the overall assessment as described in the Corporate Governance Statement and affect the variable remuneration. Climate-related considerations, which mainly include progress against our GHG emissions reduction targets, form an integral part of the assessment for determining the variable remuneration component. Climate-related considerations also include the development of sustainable products and our own ecological footprint within the implementation of our strategy and stakeholder satisfaction. The proportion of the variable remuneration of the members of the ExCo that is directly related to climate-related considerations is about 8-10%.

For further information, we refer to the Corporate Governance Statement.

## Statement on due diligence (1.2.4)

Throughout this document, we touch on various aspects of our due diligence process with regard to material sustainability matters. The table below explains how and where the application of these main steps and aspects are reflected in our Sustainability Statement.

### Due diligence in the sustainability statement

Core elements of due diligence	Sections in the sustainability statement
Embedding due diligence in governance, strategy and business model	Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies: section 1.2.2 Integration of sustainability-related performance in incentive schemes: section 1.2.3 Material impacts, risks and opportunities and their interaction with strategy and business model: section 1.3.3
Engaging with affected stakeholders in all key steps of the due diligence	Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies: section 1.2.2 Interests and views of stakeholders: - General: section 1.3.2 - Own workforce: section 1.3.2 - Consumers and/or end-users: section 1.3.2 Description of the processes to identify and assess material impact, risks and opportunities: section 1.4.1 Policies related to: - Climate change: section 2.2.2.1 - Water and marine resources: section 2.3.1.1 - Biodiversity and ecosystems: section 2.4.2.1 - Own workforce: section 3.1.1.1 - Consumers and/or end-users: section 3.2.1.1
Identifying and assessing adverse impacts	Description of the processes to identify and assess material impact, risks and opportunities: section 1.4.1 Material impacts, risks and opportunities and their interaction with strategy and business model: section 1.3.3
Taking actions to address those adverse impacts	Actions related to: - Climate change: section 2.2.2.2 - Water and marine resources: section 2.3.1.2 - Biodiversity and ecosystems: section 2.4.2.2 - Own workforce: section 3.1.1.4 - Consumers and/or end-users: section 3.2.1.4
Tracking the effectiveness of these efforts and communicating	Tracking effectiveness (through targets or other) related to: - Climate change: section 2.2.3 - Water and marine resources: section 2.3.2 - Biodiversity and ecosystems: section 2.4.3 - Own workforce: section 3.1.2 - Consumers and/or end-users: section 3.2.2 - Business conduct: section 4.1.2 Metrics related to: - Climate change: sections 2.2.3.2, 2.2.3.3 and 2.2.3.4 - Own workforce: sections 3.1.2 - Business conduct: section 4.1.2

## Risk management and internal controls over sustainability reporting (1.2.5)

Over the past years, our sustainability reporting processes have evolved to address new regulatory requirements and incorporate voluntary disclosure frameworks and other initiatives. We are continuously striving towards more robust sustainability reporting, and this requires adequate risk management and internal control processes, as further described in this section.

Sustainability reporting at KBC involves a groupwide process with strict hierarchical validation. The preparation of sustainability reports starts from input collected from business and sustainability experts in all core countries. The coordination of our Sustainability Statement is led by our Finance department, which safeguards compliance with the ESRS requirements. As sustainability information and data is processed and consolidated at group level, it is subject to a range of internal controls and reviews on top of the four-eyes principle which is applied throughout the process. For every datapoint, we determine which team is in the lead as well as which stakeholders are involved either as input provider or as challenger. Specifically for our statement under CSRD, a dedicated CSRD Steering Committee was set up to oversee and manage the implementation process. The

members of the CSRD Steering Committee represent top management of the main involved internal stakeholders such as the Sustainability, Finance, Risk, Credit Risk, HR and Compliance departments. Furthermore, our statement under CSRD is approved by our Sustainability Statement Approval Committee prior to review and approval by the ExCo, the AC and the Board.

The table below provides an overview of the main risks identified as well as our corresponding mitigation measures and how these are integrated into relevant internal functions and processes. Throughout this sustainability reporting process, the above-mentioned committees were periodically informed about these aspects.

#### Risk related to sustainability reporting processes

Type of risk	Description	Mitigation of risk
Regulatory risks	Changing external regulatory frameworks and evolving standards can put increasing pressure and non-compliance can result in regulatory fines.	We closely monitor the regulatory landscape and corresponding guidance
Data quality and verification risks	External sustainability data often lacks standardisation, making it challenging to ensure consistent and comparable reporting. Low data quality can lead to immature disclosures	We work with trusted ESG data partners and perform checks on input data. Since 2022, sustainability data is managed via KBC's dedicated Data & Metrics project (with a separate Steering Committee), involving all core countries and group functions
Legal, compliance and reputational risks	Risk of greenwashing	The information in this statement is based on factual information and subject to internal controls, including the four-eyes principle
Operational risks	Sustainability reporting has to be integrated into existing systems, processes and reports which is a complex task that – without proper automation – can lead to inefficiencies and manual errors.	We aim to further automate our sustainability reporting processes. Our Data & Metrics Steering Committee manages the challenges related to sustainability data collection and sustainability reporting

We continue to work on enhancing our reporting processes by closely following up on each of these risks and through various mitigation measures and via several internal functions and processes as shown in the table. Furthermore, we note that internal audits were carried out in 2024 on our double materiality assessment process and EU Taxonomy reporting.

## Strategy (1.3)

### Strategy, business model and value chain (1.3.1)

#### Our strategy

KBC is an integrated bank-insurance group (banking, insurance and asset management), mainly active in Belgium, Bulgaria, the Czech Republic, Hungary and Slovakia (our core markets). We are also present to a limited extent in several other countries to support corporate clients from our core markets. We offer a wide range of loan, deposit, asset management, insurance and other financial products and services in all our core countries, through our distribution channels (our network of branches and online channels), where our focus is mainly on retail, private banking, SME and midcap clients. We support our clients in their sustainability transitions through our different core activities.

Our strategy rests on principles such as client centricity, a bank-insurance+ experience, sustainable profitable growth and assuming our role in society. We refer to the 'Our strategy' section for more detailed information on our strategy (not subject to external assurance).

The following table shows our headcount of employees per geographical area:

Employee by country (headcount)	31-12-2024
Belgium	14 553
Czech Republic	11 432
Slovakia	3 279
Hungary	3 912
Bulgaria	6 338
Rest of the world	415
Total	39 929

We want to meet the needs of society and create long-term value for society, local economies and all our stakeholders. Supporting the transition to a more sustainable and resilient society is therefore a crucial part of our overall corporate strategy and our day-to-day business. We want to collaborate with our clients and other stakeholders to achieve this goal. Through the financial products and services we provide, we support, for example, economic growth, good health and well-being, and job creation.

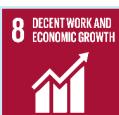

Our sustainability-related goals are linked to the Sustainable Development Goals (SDGs) established by the United Nations. In all our core countries, our current significant products and services and significant client groups are considered in relation to these goals as follows:

**SDG 3 Good health and well-being:** we value a work-life balance for our employees and design our products to enhance healthcare, quality of life and road safety.

**SDG 7 Affordable and clean energy:** we promote local renewable energy production and its efficient use. KBC has phased out financing, insuring and investing in thermal coal. We also have clear restrictions in our Energy Policy on other non-sustainable energy solutions, like oil and gas.

**SDG 8 Decent work and economic growth:** we support entrepreneurs and invest in innovative businesses. We especially support start-ups and scale-ups with a focus on female entrepreneurship through our Start it community. Our microfinance and microinsurance activities provide rural entrepreneurs in the Global South with access to financial services, driving sustainable local development and financial inclusion.

**SDG 12 Responsible consumption and production:** we offer banking and insurance products tailored to low-carbon and circular businesses, while promoting Responsible Investing (RI) as our first and preferred investment solution.

**SDG 13 Climate action:** we implement strict sustainability policies across our core activities and have set climate targets in our lending and investment portfolio to align with the Paris Agreement. We engage with clients as well as our investees to reduce their climate impact while also working to minimise our own footprint.

Our (sustainability) strategy is linked to the SDGs described above:

- Limiting our adverse impact by applying strict rules to our business activities related to the impacts identified: linked to SDG 7, SDG 12 and SDG 13;
- Increasing our positive impact by providing more sustainable finance and supporting our clients in their sustainable transition: linked to SDG 3, SDG 7, SDG 8, SDG 12 and SDG 13;
- Financial resilience: linked to SDG 8.

We encourage responsible behaviour on the part of all our employees who bring our strategy to life. We therefore invest heavily in building sustainable skills and a sustainable vision carried by all employees.

#### **Our business model**

Our business model as a bank-insurer is built on the principle of creating sustainable value. As a bank we create this sustainable value by offering, for example, sustainable investments to our clients to enable them to grow their wealth and by lending to different client groups (such as private individuals, companies and governments) and sectors (including, for example, social profit and infrastructure) to support the economy. As an insurer, we support our clients in reducing their risks. We offer several other financial and non-financial services which also contribute to the (local) economy and social network. In all these activities

we consider our impacts on the environment and society across our value chain. We create sustainable value thanks to our resources such as our own workforce, our physical and digital distribution network, our different stakeholders (see section 1.3.2) and our financial capital (such as our equity and deposits). For more detailed information, we refer to the 'Our business model' section (which is not subject to external assurance).

#### **Our value chain**

Our value chain encompasses all our activities, resources and relationships which are related to our business model and used to create our products and services from conception to delivery. Upstream we rely on three main clusters of activities and their related suppliers and other business relations. The core activities that we perform are situated in our own operations and enable us to deliver products and services (split into our five main activities) to our distributors, clients and business relations downstream. In addition, our value chain also considers the communities in which we operate.

#### **Value chain**

<b>Major upstream activities</b>	<b>Major activities in our own operations</b>	<b>Major downstream activities</b>
<ul style="list-style-type: none"> <li>• ICT (software, hardware, security, etc.)</li> <li>• Services (certain human resources services, professional/consultancy services, etc.)</li> <li>• Facilities (electricity, office furniture, etc.)</li> </ul>	<ul style="list-style-type: none"> <li>• Human resources (our own workforce)</li> <li>• Infrastructure (property and equipment for self-use, etc.)</li> <li>• Sales/marketing (including advice linked to the sales of our products and services, sponsorships and partnerships, advertising, donations, etc.)</li> <li>• Product development (research, handling personal data, etc.)</li> <li>• Business conduct (relationships with suppliers, public relations, etc.)</li> </ul>	<ul style="list-style-type: none"> <li>• Lending</li> <li>• Asset management/investments</li> <li>• (Re)insurance</li> <li>• Other financial services (such as factoring, operational leasing, fleet management, etc.)</li> <li>• Other non-financial services (such as real estate, roadside assistance, employee benefits, support for start-ups, etc.)</li> </ul>

## **Interests and views of stakeholders (1.3.2)**

Our stakeholders can be divided into two groups: affected stakeholders (those whose interests are affected or could be affected by our activities and business relationships across our value chain) and users/readers of the Sustainability Statement. The affected stakeholders are our clients (retail, SME and corporates), our employees, our suppliers and society at large (including nature as a silent stakeholder). The users of the Sustainability Statement are not only our investors, core shareholders and public authorities, but also our business partners, trade unions, non-governmental organisations, governments, academics and analysts.

We engage (at group level and in each of our core countries) in dialogue with our stakeholders on a regular basis, as part of our due diligence process (see section 1.2.4) and our materiality assessment process (see section 1.4.1). These engagements are done with the purpose of capturing our stakeholders' views and interests. This underpins our strategy and business model.

## Key interactions with our stakeholders

Stakeholder groups	Engagement activities	Their interests and views
Our <b>consumers</b> inform us through:	<ul style="list-style-type: none"> <li>an annual client satisfaction ranking which is translated into a client net promotor score (NPS)</li> <li>regular client panels and client consultations</li> <li>local engagement by the branch network and relationship managers</li> <li>our Complaints Management, providing us with insights on the views of our clients</li> </ul>	<ul style="list-style-type: none"> <li>A trustworthy partner</li> <li>Respect for privacy and protection against cyber risk</li> <li>Transparency</li> <li>Broad accessibility</li> <li>Top expertise</li> <li>Innovation</li> <li>Simplicity, relevant solution and personal advice</li> </ul>
We are informed by our <b>employees</b> through:	<ul style="list-style-type: none"> <li>employee surveys (e.g., Shape Your Future survey)</li> <li>the annual meeting of the European Works Council</li> <li>regular consultations with the occupational health and safety committees, health, safety and security advisers, and employee representatives</li> <li>regular progress meetings with all staff</li> </ul>	<ul style="list-style-type: none"> <li>Work-life balance</li> <li>Personal and professional development</li> <li>Health and safety</li> <li>Ethical conduct</li> </ul>
Our <b>suppliers</b> give us information through:	<ul style="list-style-type: none"> <li>the ESG questionnaire, which is an integral part of our supplier assessments</li> <li>vendor meetings on all levels of the hierarchy</li> <li>transparent, simultaneous communications and approaches in competitive sourcing cases</li> </ul>	<ul style="list-style-type: none"> <li>Transparency</li> <li>Connect and collaborate to identify opportunities</li> <li>Strengthen long-term relationships</li> <li>Shared vision, strategy and values</li> <li>Shared risk and reward</li> <li>Joint value creation</li> <li>Timely payment</li> <li>Respect contractual agreements</li> </ul>
The view of our <b>investors and core shareholders</b> are taken into account through:	<ul style="list-style-type: none"> <li>collective or one-on-one meetings with investors and analysts</li> <li>the Annual General Meeting</li> <li>reviews by credit rating agencies</li> <li>sustainability assessments such as the S&amp;P Global Corporate Sustainability Assessment, CDP, Sustainalytics</li> <li>ad hoc ESG questionnaires of investors</li> </ul>	<ul style="list-style-type: none"> <li>Value creation</li> <li>Long-term business model with clear financial and non-financial targets</li> <li>ESG as part of our strategy</li> <li>Transparency</li> </ul>
We are informed by <b>public authorities</b> via:	<ul style="list-style-type: none"> <li>our membership of banking and insurance federations</li> <li>our membership of other national and international representative bodies to establish and maintain relationships with political actors and to achieve closer follow-up of regulatory initiatives that impact the financial sector (e.g., public consultations)</li> <li>via our active participation in networking events</li> </ul>	<ul style="list-style-type: none"> <li>Compliance with applicable legislation</li> </ul>
We are informed about the existing views and interests of the <b>society</b> via:	<ul style="list-style-type: none"> <li>the membership of local works councils</li> <li>our membership of sustainability network organisations</li> <li>research papers and media analysis</li> <li>advice by external advisory boards on various aspects of our sustainability strategy and their challenge on a wide range of topics (these boards mainly consist of experts from the world of academia)</li> </ul>	<ul style="list-style-type: none"> <li>Local employment</li> <li>Transparency and good communication</li> </ul>

Members of our ExCo and Board are informed about most of these engagements. Moreover, the outputs from our structured stakeholder dialogues, follow-up on stakeholder concerns, and investor viewpoints serve as key indicators for the KBC Sustainability Dashboard, which is evaluated by the ExCo and the Board (we refer to section 1.2.1). Furthermore, the ExCo and the Board are informed about the outcome of the materiality assessment which also gives insight in the interests and views of the abovementioned stakeholders.

## Material impacts, risks and opportunities and their interaction with strategy and business model (1.3.3)

### Overview of material impacts, risks and opportunities (1.3.3.1)

During our materiality assessment, we identified actual and potential impacts, risks and opportunities associated with our own operations, and upstream and downstream value chain. We linked the identified impacts, risks and opportunities to the sustainability matters listed in the ESRS and subsequently assessed which impacts, risks and opportunities are material (see section 1.4.1 for more details on our materiality assessment). The table below shows to which material sustainability matters our material impacts, risks and opportunities have been linked and where they are situated within our value chain (own operations (OO), upstream value chain (US), downstream value chain (DS)).

Material sustainability matters	Impacts			Risks			Opportunities		
	OO	US	DS	OO	US	DS	OO	US	DS
Climate change	Climate change mitigation		■		■		■		■
	Energy			■			■		■
	Climate change adaptation				■			■	
Water and marine resources						■	■		■
Biodiversity and ecosystems				■			■		
Own workforce	Working conditions	■							
	Equal treatment and opportunities for all	■							
	Other (privacy)	■			■				
Consumers and end-users	Information-related (incl. cybersecurity)	■		■	■	■	■		■
	Social inclusion	■		■	■		■		
Business conduct	Business ethics and corporate culture	■		■	■	■	■		
	Relationship with suppliers			■					

#### Climate change

Through its downstream value chain, KBC can have material *impacts* on the environment and its retail and corporate clients in terms of climate change mitigation and energy. Potential negative impacts arise from investing in, funding and insuring carbon-intensive sectors and unsustainable energy solutions (e.g., thermal coal). However, through our loan and lease portfolios we generate a positive impact by offering products and services that contribute to a low-carbon economy and by facilitating financing of renewable energy projects. Also through our investment portfolios (both own investments and on behalf of clients), we have a potential positive impact by investing in companies whose products and services offer solutions on the climate challenges (e.g., promoting the transition to renewable energy) of today and tomorrow. Through our insurance activities, we have a potential positive impact by supporting the transition to alternative energy sources and mitigating the effects of climate change by developing specific insurance products and services and by implementing strict policies on the underlying subject of insurance. We further aim to combat climate change by increasing awareness and directing the buying habits of our retail clients towards products and services which are environmentally friendly. In our upstream value chain, we also have a potential positive impact on climate change mitigation and energy by encouraging our suppliers to reduce GHG emissions and transition to renewable energy sources. With respect to our leasing activities, this particularly includes our suppliers from the automotive sector. The aforementioned impacts are considered to affect climate change over the medium term whereas they affect the consumption and production of energy over the short and medium term.

As a financial institution, the most material climate-related *risks* are also expected through our lending, insurance and investment activities (financial as well as reputational risks). The identified material risks that relate to climate change are 'climate change transition risks' (related to climate change mitigation and energy) and 'climate change physical risks' (related to climate change adaptation). The latter can be driven by temperature-, water-, wind- or solid mass-related physical phenomena. These climate risks can lead to financial risks (credit, market, liquidity and technical insurance risk) and non-financial risks (operational, reputational and compliance risk). For example, over the short, medium and long term, transition risks can lead to sudden repricing of assets, market volatility, credit losses and climate-related litigation resulting from financing obsolete (brown) technology or infrastructure, impacting lending and investment portfolios, whereas physical risk can significantly increase the level of claims under the insurance policies we provide as well as impact the value of our assets or collateral over the medium and long term.

The aforementioned impacts and risks also create opportunities. These opportunities are mainly situated in our downstream value chain, where we support our clients in preparing and executing their own climate and energy transition plans by offering a broad range of lending, insurance and advisory products and services (including non-financial products and services). We particularly identified short-term opportunities in the ecosystems of housing and mobility, the transition to alternative energy sources (e.g., new technologies including energy storage) and new insurance products related to climate-related risks.

### **Water and marine resources**

From a financial materiality perspective, we consider water as a material topic. Risks stemming from water stress in our downstream value chain can result in negative medium- and long-term financial effects for KBC. In this regard, transition risks include, for example, regulatory initiatives to limit the impact of water stress (e.g., redistributing water use from less to more critical sectors), which might impact businesses and hence also our loan and investment portfolios. Physical water-related risks entail, for example, dwindling water supply, which can also cause supply chain disruptions as well as water and food insecurity, potentially impacting the whole economy. On the other hand, we can leverage our lending and investing capabilities to foster the sustainable use of water. Supporting our clients through funding in their water treatment and water saving solutions (including landscaping in the agricultural sector) is regarded as a short-term opportunity.

### **Biodiversity and ecosystems**

Our materiality assessment indicates that, for our own operations, biodiversity and ecosystems are not a material topic. Therefore, we did not particularly assess any negative impacts in terms of land degradation, desertification or soil sealing, nor did we assess whether our operations affect threatened species. However, the *impact* of our lending and investing activities on biodiversity and ecosystems is deemed material in the medium term. Potential negative impacts arise from funding and investing in activities (both own investments and on behalf of clients) associated with unsustainable land use and other drivers of biodiversity and ecosystems loss. Potential positive impacts can be realised through investments in companies whose products and services tackle the challenge of scarcity of natural resources.

From a *risk* perspective, we are aware of the potential medium- and long-term negative financial effects from biodiversity loss and damage to ecosystem services. Both the associated physical and transition risks are viewed as material. For example, policies introduced to contain biodiversity loss (e.g., restrictions on deforestation, excessive land use, etc.) might impact businesses and hence also our loan and investment portfolios. Continued biodiversity loss can also lead to more systemic risks with, for instance, supply chain disruptions, increased pandemic risk or food insecurity, potentially impacting the whole economy (including KBC's loan, investment and insurance portfolios).

### **Own workforce**

The identified material impacts, risks and opportunities related to our own workforce pertain to our own employees. In other words, anyone who has signed an employment agreement with an entity within KBC is included in the scope of our Sustainability Statement.

From an *impact* perspective, no material actual negative impacts were identified through our materiality assessment. The identified material impacts affect all of our employees equally and in a positive manner over the short, medium and long term. In terms of working conditions (in particular with respect to secure employment, working time, adequate wages, social dialogue, freedom of association, collective bargaining, work-life balance and health and safety), KBC goes beyond regulatory expectations in all its core countries on a wide range of employee rights and benefits. We also create a positive impact for our employees through equal treatment and opportunities. In this regard, we highly value gender equality and structurally embed equal pay for work of equal value. KBC strives to create a stimulating work environment where our employees get the opportunity to develop themselves, to express their ideas and to take responsibility (corporate citizenship). Here, we particularly have a positive impact on diversity through our recently updated Diversity and Inclusion Policy as well as through the measures we have in place against violence and harassment in the workplace. On top of that, we also focus on the development of talent and skills through extensive training opportunities. Another important impact that KBC has on its employees is in terms of privacy, where we deem this impact positive since data protection is treated as a top-level priority.

Stemming from the impact that KBC has on the privacy of its employees, reputational and litigation risks could arise in the short, medium and long term when the privacy of the employees would not be respected or when employee data would leak as the result of a cyberattack. Our materiality assessment did not identify any other risks related to our own workforce. Risks related to incidents, forced labour and child labour are very improbable in the countries and sectors in which we operate.

In addition, we did not identify any material opportunities arising from impacts and dependencies on our own workforce.

We further note that the transition plans and actions outlined in section 2 (see sections 2.2.1.1 and 2.4.1.1) do not give rise to any material impacts on our own workforce.

### **Consumers and end-users**

Over the past years, we have worked towards the digital transformation of our core business model and have put the interests and views of all our consumers and end-users at the heart of everything we do. This is the cornerstone of our strategy and we keep a close eye on the impacts on our consumers and end-users (see section 1.3.2 for our key interactions with our stakeholders). The (digital) interactions with our consumers and end-users form the basis of our business model in our strategy, not only in terms of sales and advice, but also in process and product development. In doing so, we take into account potential negative impacts related to matters such as privacy, access to quality information, responsible marketing practices and cybersecurity. We aim to prevent potential material negative impacts in a widespread context, as well as potential negative impacts in individual cases/incidents.

Through our stakeholder engagements (see section 3.2.1.2.), we develop our understanding of how consumers and end-users with particular characteristics or those using particular products or services may be at greater risk of harm. We have not identified specific groups of consumers or end-users which are at a greater risk of harm in relation to particular material risks, as these risks apply to all of our consumers and end-users. Nevertheless, our processes guarantee specific attention for children when offering products and services and processing personal data.

We could have a potential material negative *impact* on the privacy of our consumers (directly and indirectly via third parties) in the short term and consequently also on the fundamental human rights of our clients, which is mitigated by processing personal data with utmost respect for privacy. The processing of personal data also serves to benefit our consumers by offering extra services and convenience. We collect and process sensitive data of our consumers and therefore have a potential negative impact on their privacy should sensitive data leak and privacy be breached. A breach in our cybersecurity could give rise to a material negative impact in the short term as the impact of a cyberattack could not only affect our business and consumers, it could also damage our business' standing and consumer trust. We exert a material positive impact from cybersecurity by taking up our role in society by organising information sessions and campaigns to create awareness among our clients on cyber risks. We also aim to limit the negative medium-term impact that our suppliers (and, more specifically, third parties) could have on the privacy of our clients. We have strong policies and processes in place to reduce the possibility of data loss events caused by third parties. Furthermore, KBC plays an important role in the financial resilience of individuals and businesses over the short term. We protect our clients from the financial consequences of healthcare risks with the insurance products we provide and protect the confidentiality of their health information.

In terms of social inclusion, we could also have a potential material negative medium-term impact on our consumers and end-users when our marketing practices are not clear, straightforward and accurate (in this case the information is not suitable to enable consumers to make informed decisions).

The material *risks* identified for our own operations and upstream activities that relate to consumers and end-users can emerge over the short, medium and long term from the negative impacts as highlighted above (cyber risks, data protection issues, information-related risks, social exclusion) and can lead to non-financial risks (operational, reputational and compliance risk). Risks are also present in our downstream activities: e.g., if our corporate clients do not adequately deal with the above-mentioned social topics, this can also lead to financial risks for KBC (e.g., credit risk).

Providing access to quality information is a material short-term *opportunity*, as we could guide our consumers through their sustainability journey with our advisory services (through webinars, third-party services, face-to-face interactions) related to subsidies, regulations and taxonomy.

## **Business conduct**

In the context of business conduct, KBC aims to have a positive *impact* in the medium term on corporate culture by promoting and safeguarding ethical and responsible behaviour in all our operations. We also take up our role in society and have policies and strict rules in place for our employees to limit the impacts in the short term related to tax avoidance and clients seeking to violate the tax regulations. In terms of financial materiality, we identified material *risks* related to business conduct in different parts of our value chain. Risks could emerge over the short, medium and long term if our own business conduct (i.e. responsible behaviour in general, including our practices regarding responsible tax practices, bribery and corruption, whistle-blowing channels, anti-money laundering and counter terrorist financing) and related policies are not properly established and managed, leading to non-financial risks (legal and compliance risk). Additionally, if our corporate clients or third parties do not actively establish good business conduct-related practices and policies, this can also lead to credit and operational risk. Furthermore, operational and compliance risks can emerge over the short, medium and long term in case the relationships with our suppliers would be damaged by, for example, inadequate payment practices or when KBC would engage/contract suppliers involved in corruption and bribery.

## **Changes to material IROs**

We note that, as this is our first sustainability statement under ESRS, we are not (yet) able to disclose any changes to the material impacts, risks and opportunities compared to the previous reporting period.

## **Entity-specific disclosures**

We highlight that all the material impacts, risks and opportunities are covered by the ESRS Disclosure Requirements; however, in our opinion, cybersecurity and responsible tax practices are not sufficiently covered. We have therefore integrated cybersecurity into section 3.2 (Consumers and end-users) and responsible tax practices into section 4.1 (Business conduct) alongside the relevant disclosure requirements.

## **Interaction with strategy and business model (1.3.3.2)**

### **Effects on business model and strategy**

At KBC, we strive to create value for all our stakeholders through our financial products and services, including the society at large. Throughout our value chain, we examine the current and anticipated effects of our material environmental impacts, risks and opportunities on our sustainability strategy and business model. Recognising the material significance of these effects, we have developed comprehensive strategies aimed at minimising our negative effect on our stakeholders, maximising our positive effect on our stakeholders and pursuing opportunities where identified. These strategies result in policies and concrete actions. For climate change, this is described in section 2.2.2, whereas for biodiversity this is covered in section 2.4.2. Furthermore, the management of our material environmental risks related to climate change, water and marine resources and biodiversity is embedded in our Risk Management Framework (see section 2.2.2).

As a bank-insurer, the basis of our business model is client trust. Therefore, client centricity remains a cornerstone of the KBC strategy. We carefully consider consumer protection, investor protection, and data protection in our product development processes. An important focus is to ensure optimal protection against cybercrime for both our clients and our subsidiaries. The Information Security Strategy (see section 3.2.1.1) addresses the negative impacts of security incidents and associated losses. Furthermore, we aim to support our clients in the best possible way by listening to and understanding their needs, by offering products and services that strengthen their financial resilience and by adequately informing them during client interactions and through responsible marketing practices.

With respect to our own workforce, we aim to attract and retain strong profiles who are capable and committed to upholding KBC's high standards across all our business activities and internal operations. We value the day-to-day work of all our employees as a crucial enabler for implementing our strategy and creating sustainable value. In this regard, employee trust and satisfaction are essential prerequisites. To this end, we safeguard the positive impacts we have on our employees throughout the employee lifecycle and in this way also the associated effects on our business in terms of recruitment, employee satisfaction and retention. This includes respecting and protecting the privacy of our employees.

In addition, we want to stress the importance of correct business conduct and responsible behaviour as key foundations in developing and implementing our strategy and business model. We continue our ongoing efforts to foster a culture of ethical and responsible behaviour and to monitor the business conduct risks across our value chain.

### **Resilience of strategy and business model**

We continuously assess the resilience of our sustainability strategy to material impacts, risks and opportunities. Through its sustainability strategy, KBC aims to take up its role in society and create value for its stakeholders. In this regard, we monitor (the implementation of) our policies and adjust them when needed. In general, our strategy seeks to safeguard our business whilst preparing ourselves for the evolving regulatory context, the geopolitical context and macroeconomic changes, rapidly changing technologies, societal changes, shifts in client behaviour and other sustainability evolutions. During our annual financial planning cycle, we explicitly consider sustainability across all levels of the organisation, among other things by including plans to meet our climate targets, detecting opportunities, and integrating ESG risk into the risk appetite. To be less vulnerable to changes in the external environment – including environmental change – we pursue diversification and flexibility in our business mix, client segments, distribution channels and geographies. At all times, we refrain from focusing on short-term gains at the expense of long-term stability. Our solid risk management framework and risk appetite further ensure financial and operational resilience, taking into account all of the identified material risks (as described in section 1.3.3.1) in the short, medium and long term and across environmental, social and governance matters.

When assessing the resilience of our business model and our capacity to honour our financial responsibilities, we consider large societal challenges (e.g., climate change) and apply scenario analysis. Particularly in the context of climate risk management, in addition to participating in regulatory/supervisory exercises, we regularly conduct several internal stress testing exercises to analyse the resilience of our business model in relation to climate change. For this purpose we consider mild, medium and severe climate risk stresses for time horizons aligned with our financial planning cycle (three years), but also beyond, in order to cover risks which are expected to grow in the longer-term. The scenario used assumes that the transition towards a green economy negatively impacts some P&L and capital drivers of our bank and insurance activities, such as operational expenses, net interest income, and insurance claims. Moreover, competition in sustainable products and services is putting pressure on volumes. Although profitability could be impacted under the more severe climate-related stresses, returns for shareholders remain above the cost of equity.

These conclusions are considered in the context of our internal exercises to assess our capital and liquidity adequacy (i.e. the regulatory required Internal Capital/Liquidity Adequacy Assessment Process – ICAAP & ILAAP – for KBC Group as a whole and for our banking activities, and the Own Risk & Solvency Assessment – ORSA – for our insurance activities). In these exercises we also test the adequacy of our capital, by applying more severe stress tests within our reverse stress testing mix and dedicated climate risk stress tests. These cover both highly elevated transition risk and severe physical risk scenarios. Overall, the results of the scenario analyses and stress tests performed demonstrate that no material impact is expected within the short term and that therefore the capital that we hold, also from a Pillar 2 perspective (based on our internal capital model), is adequate. The same holds for the capital that we calculate under Solvency II for the risks associated with natural catastrophe events (physical risks) in our insurance business.

It can be concluded that long-term financial stability is not jeopardised, as even adverse assumptions regarding the severity of transition and physical risks do not jeopardise our solid capital and liquidity position. Nevertheless, we are already proactively adjusting our processes, policies, and portfolios in order to be prepared for possible (disrupting) medium- or long-term climate change impacts on capital and as such avoid severe future impacts caused by transition or physical risks.

### **Current financial effects related to material risks and opportunities**

Whereas the stress tests give a good indication of the order of magnitude of the expected financial impacts in case specific climate scenarios would materialise, the data currently available is not granular enough to perform a precise quantification exercise. Due to the current restrictions regarding the availability of ESG risk data, our calculations are still reliant on proxies (especially for value chain activities). Moreover, ESG risk measurement methodologies are still maturing. This can impact both the reliability and stability of estimates. The same holds for the financial effect of opportunities as the resources are often embedded in the regular business budgets ('sustainability is everyone's responsibility') and some of the financial effects only become visible in the long term. However, as indicated above, we can state with sufficient reliability that no material impact is expected on our consolidated financial position, consolidated financial performance and consolidated cash flows in the short run (i.e. within the next annual reporting period).

## Impact, risk and opportunity (1.4)

### Description of the processes to identify and assess material impact, risks and opportunities (1.4.1)

Our double materiality assessment forms the foundation of this Sustainability Statement. Through this assessment, we have determined which sustainability matters are material to KBC from an impact or financial perspective. The impact perspective considers the positive and negative impacts that KBC has on society and the environment, whereas the financial perspective considers the risks and opportunities for KBC that arise from sustainability matters. This section describes our processes for identifying and assessing our material impacts, risks and opportunities. Once an identified impact, risk or opportunity is assessed as material, the associated sustainability matter is also marked as material.

Overall, the methodology we applied when carrying out this assessment is based on ESRS and aligned with the EFRAG (European Financial Reporting Advisory Group) Materiality Assessment Implementation Guidance. Based on this guidance, we defined a scoring method to assess our (potential) impacts and opportunities. The quantitative thresholds set to determine the materiality of our identified impacts were inspired by the five-point scale as outlined in the EFRAG Materiality Assessment Implementation Guidance. In this way, the impacts were classified into five categories ranging from 'Minimal' to 'Critical' for KBC. Material risks were predominantly identified based on existing risk identification exercises, our risk measurement tools and risk assessments. To complement our existing risk exercises, additional assessments were carried out based on expert judgement. The assessment of opportunities was based on a scoring mechanism similar to the risk scoring.

In 2024, we performed the double materiality assessment in its current form for the first time. We aim to investigate on a yearly basis whether there are substantial changes to be made to this assessment.

#### **Impact materiality assessment**

As a first step in our impact materiality assessment, we conducted a mapping of the business relationships in our value chain, taking into account the countries in which we operate, our stakeholder dialogues and other relevant sources. By doing this early in the process, we were able to clearly distinguish between impacts related to our own operations and indirect impacts we have through our business relationships. As a bank-insurer, we recognise the importance of identifying the broad range of indirect impacts related to our lending and investment portfolios (our own and on behalf of our clients) as well as through our insurance activities.

To identify our impacts on the environment and society, we engaged with relevant internal and external stakeholders and experts. The views and concerns of our stakeholders regarding environmental, social and governance issues were gathered through different engagement activities that were carried out throughout the year. Engagement activities included surveys, stakeholder dialogue and (client) meetings. They provided us with valuable insights which served as input for our impact materiality assessment. We also collected input from various experts across all relevant internal stakeholder departments. For our lending portfolio in particular, we used UNEP FI (United Nations Environment Programme Finance Initiative) impact identification tools and our strategic White Papers to identify relevant impacts. Furthermore, for our financing of and advisory services for major industrial and infrastructure (including real estate) projects, we have adopted the Equator Principles, a framework for determining, assessing and managing environmental and social impacts. The Equator Principles include the consultation of affected communities and the implementation of effective grievance mechanisms to resolve social and environmental concerns related to these projects.

When identifying, assessing and monitoring the sustainability-related impacts of our investment portfolios, we use our responsible investing methodology. This entails that we actively investigate the sustainability-related characteristics of companies, not only based on their policies, products and services, but also based on the share of their turnover that is related to sustainable activities.

In addition, we engaged with our ESB, which consists of external experts. The aforementioned inputs were further complemented with external sources such as sector organisations, various sector reports (e.g., S&P Global ESG Materiality Maps), ESG rating agencies, frameworks (e.g., Global Reporting Initiative (GRI), Sustainability Accounting Standards Board (SASB), etc.) and our peers.

In this way, we ensured that our impacts related to environmental (climate change, pollution, water and marine resources, biodiversity and ecosystems as well as resource use and circular economy), social and business conduct matters were appropriately identified and that all topics listed in the ESRS were taken into consideration. Through a desktop analysis (bottom-up approach), we finally derived a list of potential material topics from all the information collected.

More specifically for our impact on climate change, we leveraged our Scope 1, 2 and 3 GHG emission calculations as the primary source for the materiality assessment. These calculations show that the largest share of our emissions comes from our lending, investment and insurance underwriting activities, i.e. our portfolio emissions accounted under Scope 3 Category 15 'Investments'. For KBC, the indirect emissions from our business activities (i.e. Scope 3 Category 15 GHG emissions) are the most material source of our emissions and hence our impact on climate change. We refer to sections 2.2.1.1 (on locked-in GHG emissions), 2.2.3.1 (climate-related targets) and 2.2.3.2 (our GHG emissions inventory) for further information on our climate-related impact.

With regard to biodiversity, we assessed our potential direct impact by mapping whether our own offices in our core countries are located in or near biodiversity-sensitive areas. Biodiversity-sensitive areas we considered include Natura 2000, UNESCO and other protected areas (excluding Key Biodiversity Areas). We concluded that none of our buildings are located in strictly protected areas (IUCN category IV and above). Furthermore, we found that a number of our offices are located in protected landscapes such as Bird Directive areas. However, based on the best available expert knowledge and given the nature of our bank-insurance business, we concluded that our activities do not negatively impact these protected areas. Accordingly, we did not assess the need to implement mitigation measures at these sites any further.

As a financial institution, we mainly affect biodiversity and ecosystems through our corporate lending services and investment portfolios. We assessed the potential impacts and dependencies of our corporate lending portfolio on nature using the tool 'Exploring Natural Capital Opportunities, Risks and Exposure' ('ENCORE'). The top three sectors with a very high impact are Building and Construction, Agriculture and Energy and the most material impact drivers are terrestrial land use, water use and marine ecosystem use.

The materiality assessment of the identified impacts was conducted together with in-house experts, the general managers of sustainability, the CEOs of our core countries (or their representatives) and a selection of our senior general managers. They acted as credible proxies of the affected stakeholders identified and helped to convey the concerns of these stakeholders based on their experience and region of operation. Each (potential) negative and positive impact was scored on a number of parameters. The parameters assessed include scale and scope for both positive and negative impacts, complemented by likelihood for potential impacts as well as irreversibility for (potential) negative impacts. During this exercise, we differentiated between our own operations and our value chain and considered short-, medium- and long-term time horizons. The results were evaluated based on our internally developed scoring method and classified accordingly on a five-point scale. This enabled us to draw a conclusion on the materiality of each impact and ultimately the corresponding sustainability matter.

For an overview of the material impacts identified within our own operations and value chain, we refer to section 1.3.3.1.

### **Financial materiality assessment**

The financial materiality assessment involves identifying and assessing our sustainability-related risks and opportunities. This section describes the underlying processes for risks and opportunities.

#### **Risks**

First of all, we point out that ESG risks are considered important risk drivers of the external environment that manifest themselves through all other traditional risk areas, such as credit risk, technical insurance risk, market risk, operational and compliance risk and reputational risk. Consequently, sustainability-related risks are not considered in isolation but are firmly embedded in all aspects and areas of KBC's Risk Management Framework and the underlying processes. To assess which sustainability matters are material from a risk perspective, it was thus necessary to determine the effect of the risks stemming from the sustainability matters assessed on the financial and non-financial risk areas. Looking at our business model and from a financial perspective, it does not make sense to assess every prescribed sustainability matter separately. For that reason, certain sustainability matters were aggregated so that a meaningful financial materiality assessment of the risks could be performed, considering all underlying components. During this exercise, we maximally leveraged existing risk identification and measurement processes. In particular, KBC has developed an ERIM to assess the impact of environmental risks (see below), and the management of social and governance risks is an integral part of compliance and operational risk management. Both the ERIM and the underpinning of expert judgement are based on several inputs, such as portfolio distributions, the geographical location of our operations and clients, product characteristics, client and asset data, internal monitoring and modelling exercises, external sources (e.g., physical hazard maps), and so on.

As part of our financial materiality assessment of risks, we considered the following elements:

- The context KBC operates in (see section 1.3.1), including the *entire value chain* (see section 1.3.1), for three distinct *time horizons* (see section 1.1.2);
- The *likelihood* that the effects related to the matter materialise, scored on a four-point scale (ranging from exceptional to frequent);
- The *magnitude* of the potential financial impact if and when the effects associated with a group of sustainability matters materialise. To this end, the financial effect of a group of sustainability matters was scored separately for every risk type (such as credit risk, technical insurance risk, reputational risk, etc.). We also considered risks that could be derived from previously identified material impacts. For specific areas, the assessment was based on expert judgement, underpinned by available internal and external information. The financial effect dimension was scored on a four-point scale (ranging from a minor to a severe financial effect).

For every group of sustainability matters, which combined the likelihood and financial effect per risk type, the assessment resulted in a materiality classification per risk type (on a four-point scale: low, medium, high, severe). In the final stage, the risk-type-specific materiality scores were combined to determine whether the group of sustainability matters assessed was material from an integrated perspective. To this end, predefined materiality thresholds were put in place.

The financial materiality assessment of the environmental risks was predominantly based on our existing ERIM. This is our main internal process for identifying and assessing the impact of environmental risks on our value chain, which encompasses:

- estimating the risks for the financial and non-financial risk types;
- distinguishing between different drivers of transition and physical risks associated with climate change, biodiversity loss, water stress and pollution as well as risks related to non-circularity;
- considering three distinct scenarios which assume different levels of transition and physical risk for climate change and nature loss;
- using three different time horizons.

The ERIM is annually reviewed at the level of KBC Group, but separate maps are also in place for the banking, insurance and asset management activities. Additionally, further breakdowns are made for our core countries, given that the materiality of environmental risks can differ across jurisdictions and locations, resulting in possibly different transition and physical risks.

Specially for climate-risk-related analyses, risk impacts are estimated for three distinct climate scenarios as made available by the Network for Greening the Financial System (NGFS). More specifically, separate assessments are made for an Orderly transition scenario (in which global warming is limited to 1.5°C), a Disorderly transition scenario (global warming is limited to 2°C) and a Hot House World scenario (an increase in global warming to about 3°C). These scenarios are compatible with the climate-related assumptions made in the financial statements. We refer to Note 3.9 of the 'Consolidated financial statements' section in this report for more detailed information.

With regard to:

- climate-related transition risks, the ERIM considers the risks stemming from changing policies and regulations, technologies and changing consumer and/or investor preferences. We estimate the transition-risk-related impacts for the three aforementioned NGFS scenarios and time horizons, as the timing and severity of transition risks depends on government and policy action. The materiality assessment in the ERIM is underpinned by several internal exercises, such as monitoring of the alignment of our corporate industrial loan portfolio with decarbonisation pathways (using the PACTA tool), climate-related sector and asset-based portfolio reporting and the sectoral deep dives on sectors vulnerable to transition risk via our White Papers. These analyses also provide further insight into the assets and business activities which could be vulnerable to transition risks (i.e. assets and business activities which are incompatible with or need significant efforts to be compatible with a transition to a climate-neutral economy). The identified vulnerability depends on the climate scenario and the time horizon considered within these analyses. With respect to assets and business activities vulnerable to transition risks, we also refer to section 2.2.1.1 (on locked-in emissions) and section 2.2.2 (policies and actions related to climate change);
- climate-related physical risks, the ERIM considers both chronic and acute temperature-related, water-related, wind-related and solid-mass-related physical risks. The materiality assessment in the ERIM is underpinned by several internal exercises. With respect to flood risk, for example, which is considered the most relevant physical risk driver for KBC Group, various portfolios throughout KBC Group were analysed. The assessments were geographically tailored to the territories of the five KBC core countries (Belgium, the Czech Republic, Slovakia, Hungary and Bulgaria). The flood risk analyses cover both bank and insurance portfolios, as well as KBC's own critical infrastructure. Furthermore, risk assessments on heat stress, drought, wildfires, windstorms, landslides, subsidence and erosion were also performed for selected portfolios;
- risks stemming from biodiversity loss and ecosystem damage, the ERIM considers both transition and chronic and acute physical risks. We focused on the physical risk assessment to identify and assess dependencies on biodiversity and ecosystems for our own operations and in our value chain (e.g., natural resource scarcity leading to macroeconomic impacts, operational and supply chain disruptions, and higher consumer prices), whereas transition risks were considered to identify and assess our impact on biodiversity and ecosystems. Within these exercises, we also consider potential future macroeconomic developments and systemic risks related to biodiversity loss and underpin the conclusion by internal exercises such as the ENCORE analysis;
- the assessment of current and potential future risks stemming from the transition to a circular economy, expert judgement was applied.

### **Opportunities**

To identify our material opportunities, we considered the sustainability matters described in the ESRS as well as opportunities that could be derived from previously identified material impacts. The assessment was performed by internal experts whose knowledge covered the different sustainability matters listed in the ESRS as well as our business activities and the local (geographical) situations. The experts identified opportunities throughout our entire value chain and with different time horizons. The identified opportunities were assessed on the likelihood and magnitude of their financial effect (comparable to our approach to risks), which resulted in a materiality classification from which material opportunities could be derived using predefined materiality thresholds.

Regarding opportunities, we particularly encourage the incorporation of sustainability-related opportunities into our core products and services, such as bonds, loans, investments, insurance contracts and advisory services. In this context, we are also closely monitoring the EU Taxonomy evolutions. Across our White Paper sectors (energy, real estate, transport, agriculture, food and beverages, building and construction, metals and chemicals), we screen and identify sector-relevant sustainability-related opportunities during each White Paper assessment cycle.

Compared to our impacts and risks, the identification, assessment and management of opportunities are not yet integrated into our overall management process with the same degree of maturity. The outcome of the materiality assessment was presented to the appropriate management bodies. There are continuous efforts by the business and other departments to define and implement opportunities, which is supported by the structural embedding of opportunities in our White Paper approach. In the yearly budgeting round, all countries also need to consider sustainability opportunities and develop a plan to capitalise on these opportunities. All these initiatives form a good basis for further maturing our identification and materiality assessment of opportunities in the future.

For an overview of the material risks and opportunities across our value chain, we refer to section 1.3.3.1.

#### **Decision-making process**

In each step of the process for identification and assessment of the impacts, the intermediate results were discussed in the Group Corporate Sustainability department. For impacts related to our own workforce, the outcome of the assessment was validated by the Corporate HR managers and the local HR managers of the core countries in the international HR community. This was followed by approval from the CSRD Steering Committee. Subsequently, the outcome of the assessment was also presented to and validated by the European Works Council.

Similarly, the outcome of the risk assessment was discussed with and approved by the management of the risk functions involved before being approved by the CSRD Steering Committee.

The outcome of the impact materiality and the financial materiality exercises was also discussed in a dedicated working group set up around our double materiality assessment (which included colleagues from all main departments involved in our materiality assessment).

## Disclosure requirements in ESRS covered by the undertaking's sustainability statement (1.4.2)

### Overview of disclosure requirements

Below, we have listed all disclosure requirements covered in this Sustainability Statement.

For the disclosure requirements related to the identified material sustainability matters, we performed expert-based evaluations to determine whether all the underlying information requirements are also material for KBC. To this end, we took into account whether the information is significant as well as whether it could meet the decision-making needs of the users of the Statement.

### List of Disclosure Requirements

<b>ESRS standard</b>	<b>Disclosure Requirement</b>	<b>Full name of the Disclosure Requirement</b>	<b>Section</b>
ESRS 2 General disclosures	BP-1	General basis for preparation of sustainability statements	1.1.1
	BP-2	Disclosures in relation to specific circumstances	1.1.2
	GOV-1	Role of the administrative, management and supervisory bodies	1.2.1
	GOV-2	Information provided to and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies	1.2.2
	GOV-3	Integration of sustainability-related performance in incentive schemes	1.2.3
	GOV-4	Statement on due diligence	1.2.4
	GOV-5	Risk management and internal controls over sustainability reporting	1.2.5
	SBM-1	Strategy, business model and value chain	1.3.1
	SBM-2	Interests and views of stakeholders	1.3.2
	SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	1.3.3
ESRS E1 Climate change	IRO-1	Description of the processes to identify and assess material impacts, risks and opportunities	1.4.1
	IRO-2	Disclosure requirements in ESRS covered by the undertaking's sustainability statement	1.4.2
	ESRS 2 GOV-3	Integration of sustainability-related performance in incentive schemes	1.2.3
	E1-1	Transition plan for climate change mitigation	2.2.1.1
	ESRS 2 SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	1.3.3
	ESRS 2 IRO-1	Description of the processes to identify and assess material climate-related impacts, risks and opportunities	1.4.1
	E1-2	Policies related to climate change mitigation and adaptation	2.2.2.1
	E1-3	Actions and resources in relation to climate change policies	2.2.2.2
	E1-4	Targets related to climate change mitigation and adaptation	2.2.3.1
	E1-6	Gross Scopes 1, 2, 3 and Total GHG emissions	2.2.3.2
ESRS E2 Pollution	E1-7	GHG removals and GHG mitigation projects financed through carbon credits	2.2.3.3
	E1-8	Internal carbon pricing	2.2.3.4
ESRS E2 Pollution	ESRS 2 IRO-1	Description of processes to identify and assess material pollution-related impacts, risks and opportunities	1.4.1
ESRS E3 Water and marine resources	ESRS 2 IRO-1	Description of processes to identify and assess material water and marine resources-related impacts, risks and opportunities	1.4.1
	E3-1	Policies related to water and marine resources	2.3.1.1
	E3-2	Actions and resources related to water and marine resources	2.3.1.2
	E3-3	Targets related to water and marine resources	2.3.2.1
ESRS E4 Biodiversity and ecosystems	E4-1	Transition plan and consideration of biodiversity and ecosystems in strategy and business model	2.4.1.1
	ESRS 2 SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	1.3.3
	ESRS 2 IRO-1	Description of processes to identify and assess material biodiversity and ecosystem-related impacts, risks and opportunities	1.4.1
	E4-2	Policies related to biodiversity and ecosystems	2.4.2.1
	E4-3	Actions and resources related to biodiversity and ecosystems	2.4.2.2
	E4-4	Targets related to biodiversity and ecosystems	2.4.3.1

ESRS E5 Resource use and circular economy	ESRS 2 IRO-1	Description of processes to identify and assess material resource use and circular economy-related impacts, risks and opportunities	1.4.1
ESRS S1 Own workforce	ESRS 2 SBM-2	Interests and views of stakeholders	1.3.2
	ESRS 2 SBM-3	Material impacts, risks and opportunities and their interaction with strategy and business model	1.3.3

	G1-4	Confirmed incidents of corruption or bribery	4.1.2.1
	G1-6	Payment practices	4.1.2.2

## Other EU legislation

In what follows, we give an overview of all datapoints linked with other EU legislation, indicating where they can be found in this Sustainability Statement, and including those that we assessed as not material. For the datapoints marked as 'Not applicable', we note that the non-applicability pertains only to the information that is required by the paragraph in the ESRS indicated in the list below.

### List of datapoints in cross-cutting and topical standards that derive from other EU legislation

Disclosure Requirement and related datapoint	SFDR reference	Pillar 3 reference	Benchmark Regulation reference	EU Climate Law reference	Section
ESRS 2 GOV-1 Board's gender diversity paragraph 21 (d)	Indicator number 13 Table #1 of Annex I		Commission Delegated Regulation (EU) 2020/1816, Annex II		1.2.1
ESRS 2 GOV-1 Percentage of board members who are independent paragraph 21 (e)			Delegated Regulation (EU) 2020/1816, Annex II		1.2.1
ESRS 2 GOV-4 Statement on due diligence paragraph 30	Indicator number 10 Table #3 of Annex I				1.2.4
ESRS 2 SBM-1 Involvement in activities related to fossil fuel activities paragraph 40 (d) i	Indicator number 4 Table #1 of Annex I	Article 449a Regulation (EU) No 575/2013; Commission Implementing Regulation (EU) 2022/2453 Table 1: Qualitative information on Environmental risk and Table 2: Qualitative information on Social risk	Delegated Regulation (EU) 2020/1816, Annex II		Not applicable
ESRS 2 SBM-1 Involvement in activities related to chemical production paragraph 40 (d) ii	Indicator number 9 Table #2 of Annex I		Delegated Regulation (EU) 2020/1816, Annex II		Not applicable
ESRS 2 SBM-1 Involvement in activities related to controversial weapons paragraph 40 (d) iii	Indicator number 14 Table #1 of Annex I		Delegated Regulation (EU) 2020/1818, Article 12(1) Delegated Regulation (EU) 2020/1816, Annex II		Not applicable
ESRS 2 SBM-1 Involvement in activities related to cultivation and production of tobacco paragraph 40 (d) iv			Delegated Regulation (EU) 2020/1818, Article 12(1) Delegated Regulation (EU) 2020/1816, Annex II		Not applicable
ESRS E1-1 Transition plan to reach climate neutrality by 2050 paragraph 14			Regulation (EU) 2021/1119, Article 2(1)		2.2.1.1
ESRS E1-1 Undertakings excluded from Paris-aligned Benchmarks paragraph 16 (g)		Article 449a Regulation (EU) No 575/2013; Commission Implementing Regulation (EU) 2022/2453 Template 1: Banking book – Climate Change transition risk: Credit quality of exposures by sector, emissions and residual maturity	Delegated Regulation (EU) 2020/1818, Article 12.1 (d) to (g), and Article 12.2		2.2.1.1

ESRS E1-4 GHG emission reduction targets paragraph 34	Indicator number 4 Table #2 of Annex I	Article 449a Regulation (EU) No 575/2013; Commission Implementing Regulation (EU) 2022/2453 Template 3: Banking book – Climate change transition risk: alignment metrics	Delegated Regulation (EU) 2020/1818, Article 6	2.2.3.1
ESRS E1-5 Energy consumption from fossil sources disaggregated by sources (only high climate impact sectors) paragraph 38	Indicator number 5 Table #1 of Annex I Indicator number 5 Table #2 of Annex I			Not material
ESRS E1-5 Energy consumption and mix paragraph 37	Indicator number 5 Table #1 of Annex I			Not material
ESRS E1-5 Energy intensity associated with activities in high climate impact sectors paragraphs 40 to 43	Indicator number 6 Table #1 of Annex I			Not material
ESRS E1-6 Gross Scope 1, 2, 3 and Total GHG emissions paragraph 44	Indicators number 1 and 2 Table #1 of Annex I	Article 449a; Regulation (EU) No 575/2013; Commission Implementing Regulation (EU) 2022/2453 Template 1: Banking book – Climate change transition risk: Credit quality of exposures by sector, emissions and residual maturity	Delegated Regulation (EU) 2020/1818, Article 5(1), 6 and 8(1)	2.2.3.2
ESRS E1-6 Gross GHG emissions intensity paragraphs 53 to 55	Indicators number 3 Table #1 of Annex I	Article 449a Regulation (EU) No 575/2013; Commission Implementing Regulation (EU) 2022/2453 Template 3: Banking book – Climate change transition risk: alignment metrics	Delegated Regulation (EU) 2020/1818, Article 8(1)	2.2.3.2
ESRS E1-7 GHG removals and carbon credits paragraph 56			Regulation (EU) 2021/1119, Article 2(1)	2.2.3.3
ESRS E1-9 Exposure of the benchmark portfolio to climate-related physical risks paragraph 66		Delegated Regulation (EU) 2020/1818, Annex II Delegated Regulation (EU) 2020/1816, Annex II		Subject to phase-in
ESRS E1-9 Disaggregation of monetary amounts by acute and chronic physical risk paragraph 66 (a)	Article 449a Regulation (EU) No 575/2013; Commission Implementing Regulation (EU) 2022/2453 paragraphs 46 and 47; Template 5: Banking book – Climate change physical risk: Exposures subject to physical risk.			Subject to phase-in

ESRS E1-9 Location of significant assets at material physical risk paragraph 66 (c)	Article 449a Regulation (EU) No 575/2013; Commission Implementing Regulation (EU) 2022/2453 paragraphs 46 and 47; Template 5: Banking book – Climate change physical risk: Exposures subject to physical risk.	Subject to phase-in
ESRS E1-9 Breakdown of the carrying value of its real estate assets by energy-efficiency classes paragraph 67 (c)	Article 449a Regulation (EU) No 575/2013; Commission Implementing Regulation (EU) 2022/2453 paragraph 34; Template 2: Banking book – Climate change transition risk: Loans collateralised by immovable property – Energy efficiency of the collateral	Subject to phase-in
ESRS E1-9 Degree of exposure of the portfolio to climate-related opportunities paragraph 69	Delegated Regulation (EU) 2020/1818, Annex II	Subject to phase-in
ESRS E2-4 Amount of each pollutant listed in Annex II of the E-PTR Regulation (European Pollutant Release and Transfer Register) emitted to air, water and soil paragraph 28	Indicator number 8 Table #1 of Annex I Indicator number 2 Table #2 of Annex I Indicator number 1 Table #2 of Annex I Indicator number 3 Table #2 of Annex I	Not material
ESRS E3-1 Water and marine resources paragraph 9	Indicator number 7 Table #2 of Annex I	2.3.1.1

## Environmental information

General

Environment

Social

Governance

### Disclosures pursuant to Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation) (2.1)

The Taxonomy Regulation establishes an EU-wide framework according to which investors and businesses can assess whether certain economic activities are environmentally sustainable. In order to be environmentally sustainable and thus taxonomy aligned, the activity must:

- be a relevant activity, i.e. the activity is on the list of activities which are considered as most relevant for achieving the environmental goals defined by Europe. The relevant activities are called taxonomy-eligible activities and are described in Delegated Acts;
- comply with the Technical Screening Criteria for substantial contribution to the environmental objectives and do no significant harm to these objectives;
- be carried out in compliance with minimum social and governance safeguards.

Six environmental objectives are laid out in the Taxonomy Regulation:

- Climate change mitigation (CCM);
- Climate change adaptation (CCA);
- Sustainable use and protection of water and marine resources (WTR);
- Transition to a circular economy (CE);

- Pollution prevention and control (PPC);
- Protection and restoration of biodiversity and ecosystems (BIO).

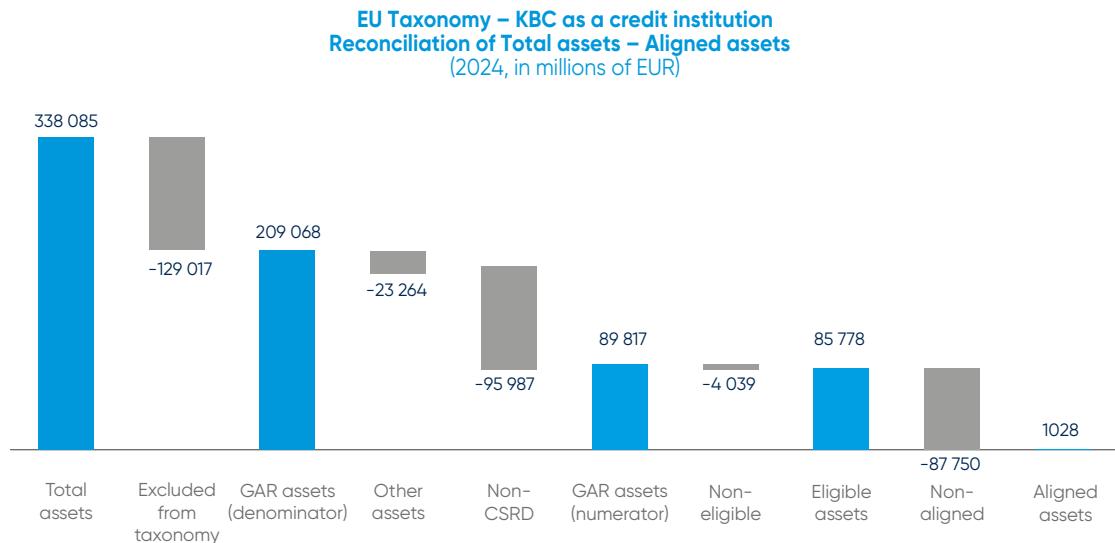

KBC is a large undertaking subject to the disclosure obligations described in the EU Taxonomy Disclosure Delegated Act (DDA). We report on our activities as credit institution, as insurer/reinsurer and as asset manager. Various working groups, with representatives from our core countries, address different themes, such as various forms of lending contributing to sustainability objectives and non-life insurance aimed at promoting climate change adaptation. Individual purpose-driven credit applications are also thoroughly screened to verify compliance with the technical criteria and social minimum safeguards. Non-purpose-driven credit applications are reported based on the Turnover and CapEx KPI of the counterparty.

Data availability remains a challenge.

- As the European Single Access Point database is not yet operational, finding all the relevant counterparty information in the published reports is a major challenge. Although data providers, collecting EU Taxonomy data, make progress, it remains a challenge for them, too.
- Many of our corporate counterparties are not (yet) subject to CSDR. As a result, these companies are not required to report on EU Taxonomy and we cannot include these counterparties in eligible and/or aligned assets.
- We are currently unable to carry out a full alignment assessment for loans to households (real estate and motor vehicles) due to a lack of individual data on the underlying assets. For instance, we do not have all individual data on the houses being financed, and for many financed electric vehicles we lack information on car tyres and the circular use of materials.

We therefore chose to also disclose voluntary taxonomy percentages in our Sustainability Report (at [www.kbc.com](http://www.kbc.com)), which are based on approximations and information available in the group (not subject to assurance).

This section is focused on mandatory disclosures. The DDA prescribes a number of detailed tables for credit institutions, insurers/reinsurers and asset managers. We have included them in the 'EU Taxonomy – detailed tables' section in the 'Additional information' section of this annual report. When the DDA prescribes that calculations must be made on the basis of Turnover and CapEx data of the counterparties, these tables are presented twice (once for Turnover, once for Capex). The discussion below is limited to the data based on the counterparty's Turnover KPIs (if applicable).

## KBC as a credit institution

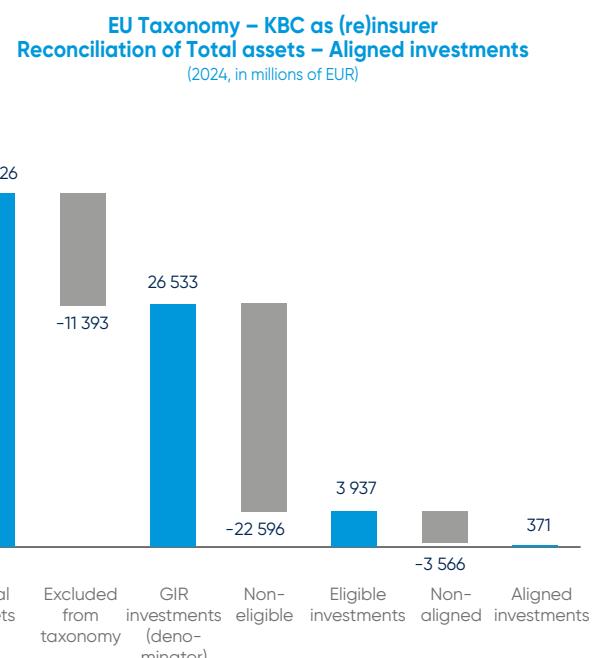

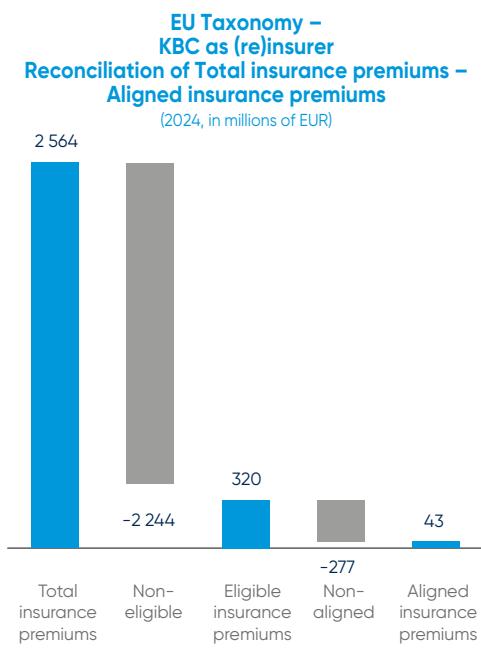

In this section, all assets are considered from the credit institutions in the group, i.e. those entities defined in Article 4(1), point (1), of Regulation (EU) No 575/2013 of the European Parliament and of the Council (prudential requirements for credit institutions). As defined in the DDA, disclosures are to be based on the scope of KBC's prudential consolidation. This scope is in line with the accounting scope (Note 6.5 of the 'Consolidated financial statements').

The mandatory eligibility percentage for the assets of our credit institutions is 41.0% (40.8% in 2023). It includes mortgage loans and car loans to households, as well as the eligible exposure to financial and non-financial counterparties (subject to CSRD). The alignment percentage (GAR, green asset ratio) is 0.5% (0.2% in 2023). The difference between the 2024 and 2023 figure is due mainly to the following two reasons: on the one hand subsidiaries and SPVs of CSRD companies are now considered as CSRD company (whereas they were not last year), and on the other hand there is more (qualitative) information available from our counterparties.

This percentage nevertheless remains low due to the limited availability of data and the asymmetric definitions of the green asset ratio numerator and denominator. For instance, in the numerator business counterparties are limited to companies subject to CSRD, whereas the denominator must also include counterparties that are not subject to CSRD. The denominator also contains a number of other assets that are not eligible, such as derivatives, cash and goodwill. In the chart, we reconcile total assets (before deduction of impairment) with aligned assets (based on the counterparties' turnover KPIs). The trading portfolio and amounts involving central banks and central governments are excluded. The alignment percentage for financial guarantees (off-balance) is 1.4% (0.4% in 2023).

## KBC as (re)insurer

In this section, all activities from the insurance undertakings in the group are considered, i.e. those entities as defined in Article 13, point (1), of Directive 2009/138/EC, and from the reinsurance undertakings in the group, i.e. those entities as defined in Article 13, point (4) of the same Directive. The figures below are based on the insurance accounting scope of KBC. For (re)insurance, two KPIs are required: one KPI related to underwriting activities and one KPI related to investments.

### *Underwriting activities*

The percentages related to underwriting activities are expressed relative to the gross written premiums of non-life insurance. The eligible premiums reflect the portion of the gross written premiums that is linked to the coverage of climate-related perils (within non-life insurance activities 'other motor insurance' – predominantly linked to hail and windstorm damage – and 'fire and other damage to property insurance' – predominantly linked to windstorms and floods). The eligibility percentage related to underwriting activities is 12.5% (14.3% in 2023). The alignment percentage is 1.7% and is solely linked to the corporate portfolio of fire and other property damage insurance in Belgium. The difference between the 2024 and 2023 figure (6.6% in 2023) mainly results from methodological improvements, based on the experience gained through last year's reporting and after a thorough assessment of our initial interpretation of the EU Taxonomy in the course of 2024, related to both taxonomy eligibility and alignment. As a result of the latter, whereas we reported taxonomy alignment related to all segments of KBC Insurance's 'Fire and other damage to property' insurance portfolio in 2023, we now limit this specifically to the corporate segment. The more standardised underwriting in the mass retail segment, which typically does not include a risk assessment and underwriting process tailored to the specifics of an individual client, makes it more difficult to meet all of the technical screening criteria as outlined in the EU Taxonomy. The criteria related to providing incentives for risk reduction and embedding risk-based rewards for preventive measures into the product design are considered particularly challenging in this regard. A gap analysis has been performed and, in the years to come, we will continue our efforts to align our range of insurance products with the taxonomy criteria in all our other core countries. For instance, to the extent that this is not already the case, all our insurance companies are preparing to use flood maps in insurance underwriting and are analysing ways to further embed forward-looking flood maps in relevant insurance risk management processes. In addition, we are exploring possibilities on how to incentivise policyholders to take preventive measures against climate-related perils. In the chart, we reconcile total insurance premiums with aligned premiums.

### *Investments*

Investments comprise all direct and indirect investments of the insurers, including loans, advances and buildings. The mandatory eligibility percentage related to investments is 14.8% (8.5% in 2023). It includes the eligible exposure to financial and non-financial counterparties and a number of loans (including a mortgage loan portfolio acquired from KBC Bank). The alignment percentage (GIR, green investment ratio) is 1.4% (0.5% in 2023). The difference between the 2024 and 2023 figure mainly results from increased data availability.

Investments are mainly managed by KBC Asset Management (AM), which has engaged an external data provider to deliver the taxonomy data.

In the chart, we reconcile total assets with aligned investments. Amounts involving central banks and central governments are excluded.

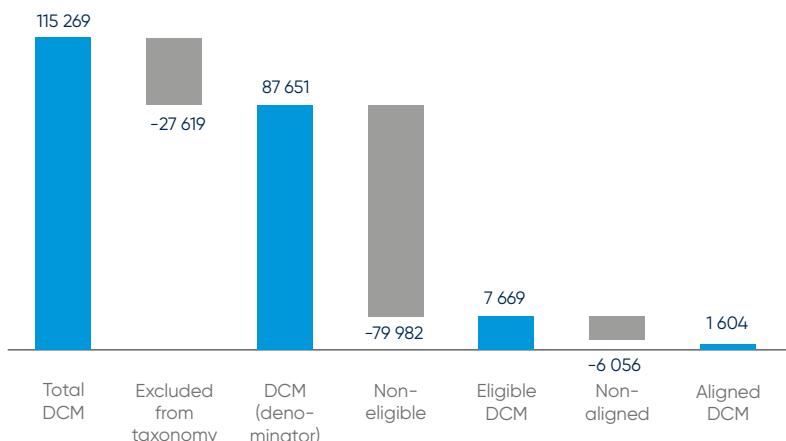

### KBC as asset manager

In this section, all assets under management related to DCM are considered (see glossary of financial ratios and terms). This DCM is managed by KBC Asset Management (taxonomy data via an external data provider).

The mandatory eligibility percentage related to DCM is 8.7% (2.0% in 2023). The alignment percentage (KPI for asset managers) is 1.8% (0.9% in 2023). The difference between the 2024 and 2023 figure mainly results from increased data availability.

In the chart, we reconcile total DCM with aligned DCM. Amounts involving central banks and central governments are excluded.

**EU taxonomy – KBC as asset manager**  
**Reconciliation of DCM (direct client money) – Aligned DCM**  
(2024, in millions of EUR)

### KBC as a financial conglomerate

KBC calculates consolidated KPI using a revenue based weighted average.

Consolidated KPI	KPI	Turnover based alignment	Capex based alignment
KBC as a credit institution	GAR	0.5%	0.4%
KBC as a (re)insurer	Combined	1.4%	1.5%
	Underwriting KPI	1.7%	1.7%
	Investment KPI	1.4%	1.8%
KBC as an asset manager	AM KPI	1.8%	2.6%
KBC as a financial conglomerate	Consolidated KPI	0.8%	0.9%

## Climate change (2.2)

### Climate change strategy (2.2.1)

#### Transition plan for climate change mitigation (2.2.1.1)

In an initial phase, KBC has focused on several important pillars in order to embed climate transition plan elements within its overall sustainability governance and strategy but has so far not formalised these into an integrated single document. At the time of reporting, no decision had been taken as to whether and by when such integrated transition plan will be adopted. The important pillars, related to transition planning, which are currently embedded into our overall sustainability governance and strategy are:

- Governance;
- Strategy;
- Scenario analysis;
- Risk and opportunity management;
- Financial planning;
- Target setting;
- Engagement.

Our sustainability governance is structured around the Sustainable Finance Steering Committee, the ISB, the ExCo and the Board. As these bodies oversee environmental issues, integrate them into the business strategy, and ensure accountability at all levels, it by definition has the consequence that climate strategy, target setting (see also section 2.2.3.1), and other relevant transition planning elements as listed above are managed and approved by the highest decision bodies within our organisation. As these decision bodies oversee the entire business model, value creation strategy, and financial planning of KBC, there is an intrinsic strong connection between these elements and our climate strategy. A dedicated Sustainable Finance Programme is in place to coordinate the implementation of the overall sustainability strategy. In order to manage the challenges linked to climate-related data collection and reporting, we installed a dedicated Data and Metrics Steering Programme. This governance framework (including its own Steering Committee) ensures that sustainability is embedded into the organisation.

Our current climate transition planning approach includes climate-related targets on our own operations' emissions as well as on some of the most material emissions that are associated with our financing or investment activities, some of which are compatible with pathways that limit global warming to 1.5°C. Consequently, our climate transition planning in its current form is partly aligned with a 1.5°C world, which is described more thoroughly in section 2.2.3 of this statement. Our climate strategy focuses on managing both our direct and indirect carbon footprints. We report every six months to the ISB, ExCo and Board on the implementation of our climate transition strategy, via a dedicated Sustainability Dashboard, which includes, among other things, the progress on our key climate targets. The dashboard outlines measurable and verifiable parameters related to the key themes and actions of the climate strategy as well as the decarbonisation levers and actions deployed (see section 2.2.2). This illustrates that transition planning elements are embedded within our overall business strategy. Our yearly financial planning exercise also incorporates certain transition plan building blocks. For example: climate is included in the economic scenarios of the Chief Economist which form the basis of our budgeting cycle; we follow up on climate-related volumes and targets; the potential impact of climate-related risks on the risk profile is considered. Based on our latest climate target progress measurements, we conclude to be overall well on track in meeting our targets and will continue to proceed with the implementation of key actions.

We identify climate-related risks and opportunities through strategic analyses (the so-called sectoral or thematic 'White Papers') and tailored risk and opportunity assessments. The management of ESG risk, including climate-related risks, is firmly embedded in all building blocks of our Risk Management Framework (see section 2.2.2.2). During the White Paper analyses we detect opportunities and translate them into concrete service offerings and products. We engage with our clients to support their transition, develop sustainable products and monitor decarbonisation progress. The outcome of this continuous risk and opportunity management is closely linked with our climate strategy and target follow-up and is also taken into account in our financial planning cycle, touching directly on our portfolio mix, expenses and capital adequacy assessment. Regular monitoring and management reporting on all of the above-stated topics ensures transparency and accountability, enabling internal and external stakeholders to track progress and assess the effectiveness of our climate strategy and risk and opportunity management.

We use a set of climate scenarios to support transition planning, including those from the International Energy Agency (IEA), the NGFS (Network for Greening the Financial System) and more customised scenarios. This set of scenarios reflects various models, time perspectives, climate temperature objectives (including 1.5°C alignment) and regional coverage. The use of these scenarios supports our overall risk identification and measurement, strategic planning, and resilience assessments for potential future outcomes. Scenario analysis therefore influences and makes more robust our strategy, financial planning, target setting, capacity building, and risk and opportunity management. See sections 1.4.1 (financial materiality assessment) and 2.2.3.1 for more information.

Lastly, the implementation of our current climate transition planning approach includes engagement with various stakeholders including policymakers and clients. Our aim is to create a ripple effect that extends a positive impact beyond our own operations by fostering strong relationships and sharing best practices (see also section 1.3.2).

To our knowledge, there are no locked-in emissions detected for own operations which jeopardise the achievement of our GHG emissions reduction targets. Our climate change lending targets form an important pillar in supporting decarbonisation in some of the highest carbon-intensive activities in our loan portfolio. Progressing on our targets intrinsically also contributes to avoiding exposure to stranded asset risk (risk of losing their economic value ahead of their anticipated useful life). Potential locked-in GHG emissions are not quantified, but assets that have the potential to become stranded are identified via measurement updates of our climate target progress and White Paper exercises.

KBC is not meeting any of the exclusion criteria listed in Articles 12.1 and 12.2 of the EU Climate Benchmark Regulation (Commission Delegated Regulation (EU) 2020/1818).

## Climate change: Impact, risk and opportunity management (2.2.2)

### Policies related to climate change mitigation and adaptation (2.2.2.1)

All sustainability-related policies are bundled in our Sustainability Policy Framework, offering a condensed but comprehensive overview of these policies. This framework defines the scope of our policies, summarises the governance on how policies are determined and implemented, and describes our actual policies, based on a combination of exclusion of certain companies, sectors or activities and the application of certain conditions. It relates to all material impacts, risks and opportunities that were identified for KBC, and as such, we will refer to this Framework (available on [www.kbc.com](http://www.kbc.com)) when disclosing on different matters in this Sustainability Statement.

A strict due diligence process is in place to monitor compliance with these policies, including the possibility of requesting advice from sustainability experts on sustainability-related matters for individual cases. We also take into account reputational risk aspects within the scope of such advice, which in some cases are mandatory.

The framework is applicable worldwide to all of our core business activities (lending, insurance, advisory services and investment advice) as well as supporting activities (own investments and procurement), and covers all sectors and activities deemed (potentially) controversial and for which we have developed policies (human rights, energy, steel, cement and aluminium, mining, defence, biodiversity, gambling, tobacco, animal-related activities, and prostitution).

We update our sustainability policies at least once every two years. We consider the interests of key stakeholders, as all policies in the Sustainability Framework are challenged by the ISB, and some are also discussed with our ESB, which represents the interests of key (external) stakeholders.

For all of our sustainability policies, final ratification and accountability lies with the ExCo. However, all staff involved are responsible for the implementation. Environmental responsibility is one of the focus areas of our sustainability strategy, meaning that we are committed to managing the direct and indirect environmental impact of our business in a responsible way. It also means that we are committed to increasing our positive impact while limiting our adverse impact on the environment. Specifically for climate change, this means that we are supporting the transition towards a sustainable, low-carbon economy.

### **Environmental Policy**

Our Environmental Policy sets out a series of general guidelines, such as:

- developing and offering banking, insurance and investment products and services that support a sustainable, low-carbon and climate-resilient society;
- applying and regularly reviewing strict policies to limit the environmental impact of our core activities by reducing the environmental and climate impact of our portfolio of loans, investments, insurance and advisory services;
- creating awareness of environmental responsibility among our internal and external stakeholders, empowering employees to implement this policy and encouraging suppliers to adopt a similar approach.

These general guidelines are further translated into specific policies, such as the Energy Policy and the Mining Policy (see below).

A dedicated sustainability team at group level is responsible for

- challenging the internal business stakeholders on their sustainable product offering;
- regularly reviewing the specific policies;
- providing guidelines for the implementation of the restrictions in these policies.

### **Environmental Policy**

Scope	Applicable worldwide and covering all business activities and operations throughout the group	
Reference to third party agreements	Paris Agreement Taskforce on Climate-related Financial Disclosure (TCFD) Greenhouse Gas Protocol Collective Commitment to Climate Action (CCCA) UNEP FI Principles for Responsible Banking (UNEP FI PRB)	
<b>Areas addressed:</b>		
Climate change mitigation	Yes	Examples: specific Energy Policy with restrictions on coal/oil/gas, own footprint targets
Climate change adaptation	Yes	Examples: development of products and services like multi-peril crop insurance, financing/insuring of water-saving projects
Energy efficiency	Yes	Examples: own footprint targets, specific products linked to EPC (Energy Performance Certificate)
Renewable energy deployment	Yes	Example: financing of renewable energy projects
Other climate change-related areas	No	-

## Energy Policy

As demonstrated by our signing of the Collective Commitment to Climate Action (CCCA) in 2019, we have the ambition to contribute to a low-carbon society. The CCCA was adopted by some signatories to the UNEP FI Principles for Responsible Banking (PRB) as an additional climate commitment when it was launched in September 2019. Through our CCCA commitment, we have committed ourselves to align our portfolios with the Paris Agreement goal to limit global warming to well-below 2 degrees, striving for 1.5 degrees Celsius. Our Energy Policy aims to exclude or restrict the use of fossil energy and to support the development of renewable energy. It excludes any financing and insurance of, or advisory services related to, direct thermal coal-related projects, and subjects any other financing and insurance of, or advisory services related to, companies still involved in thermal coal to strict conditions. It also excludes any financing and insurance of, or advisory services related to, the exploration and development of unconventional oil and gas fields as well as any other new oil or gas fields.

## Energy Policy

Scope	This policy has a worldwide scope and applies to all financing, insurance and advisory services related to companies involved in the generation of electricity or heating, either as producers or as suppliers or contractors to such companies	
Areas addressed:		
Climate change mitigation	Yes	This policy addresses climate change mitigation by focusing on transitioning from a fossil-fuel energy system towards a renewable energy system
Climate change adaptation	No	-
Energy efficiency	No	-
Renewable energy deployment	Yes	This policy addresses renewable energy deployment by focusing on transitioning from a fossil-fuel energy system towards a renewable energy system
Other climate change-related areas	No	-

## Recalculation Policy

We have external targets both for our own and for financed greenhouse gas emissions (see section 2.2.3.1.). These targets refer to the emissions of a particular fixed base year. To anticipate events which require a restatement of this base-year calculation, we have a policy describing the process and recommended methods of recalculation. The final decision to restate a baseline, the recalculation method and the possible impact on the relevant target is taken by the ISB, which can delegate this to the Sustainable Finance Steering Committee. If a previous calculation was externally assured, the recalculation is fully disclosed to the assurance provider so they can prepare their potential re-assurance.

## Recalculation Policy

Scope	This policy applies to our external targets related to own footprint and financed emissions. More specifically for the financed emissions, this policy is applicable for each sector/domain for which we have set external emission targets. Targets are defined at KBC Group level. KBC Asset Management and own investments are not in scope of this Recalculation Policy for the time being.	
Reference to third-party agreements	This policy is based on the Greenhouse Gas Protocol	
Areas addressed:		
Climate change mitigation	Yes	This policy addresses the restatement of our external climate targets (emissions reduction)
Climate change adaptation	No	-
Energy efficiency	No	-
Renewable energy deployment	No	-
Other climate change-related areas	No	-

### **Investment Policy**

This policy aims to determine strict ethical restrictions with regard to investments. We exclude investments in companies listed on the KBC Blacklist, on the KBC Human Rights Offenders List and investments in governments or other public authorities within a country listed on the KBC Controversial Regimes List. This also applies to investments in companies that are in any way involved in the extraction of thermal coal and/or power generation companies using thermal coal. Investments in companies involved in tobacco are also excluded. Compliance with this policy is fully embedded in the investment processes of KBC Asset Management.

### **Investment Policy**

Scope	This policy has a worldwide scope and is applicable to all of KBC's investment activities, both for the account of clients as well as for KBC subsidiaries' own account	
Areas addressed:		
Climate change mitigation	Yes	This policy addresses climate change mitigation by excluding from our investments some parties and activities with negative impact
Climate change adaptation	No	-
Energy efficiency	No	-
Renewable energy deployment	Yes	This policy addresses renewable energy deployment by excluding some parties and activities with negative impact
Other climate change-related areas	No	-

### **Investment Policy for Responsible Investing funds**

With responsible investing, KBC Asset Management aims to support the evolution towards a more sustainable world by:

- not investing in activities with a severe negative impact on ESG themes;
- promoting ESG principles through our investments;
- encouraging countries and companies to consider sustainability and climate change in their decision-making process;
- promoting sustainable development by investing in green, social and sustainability bonds and in issuers contributing to the UN SDGs.

As such, our Responsible Investing funds apply a dualistic approach, based on a negative screening (see the policy below) and a positive selection methodology. The Responsible Investing funds portfolio includes funds that are classified as Article 8 and Article 9 under SFDR (Sustainable Finance Disclosure Regulation).

All our Responsible Investing funds must achieve specific ESG objectives, which depend on the type of fund. Concrete portfolio targets are set with regard to ESG (risk) scores, GHG emissions, Green, Social & Sustainability bonds, and sustainable investments. In addition, KBC Asset Management will protect the interests of its investors and continue to promote responsible conduct through proxy voting and engagement.

A review of this policy is part of the yearly review of the responsible investing methodology.

### **Investment Policy for Responsible Investing funds**

Scope	This policy is applicable to all Responsible Investing funds managed by (all subsidiaries of) KBC Asset Management	
Most senior level accountable	This policy is formally approved by the ExCo of KBC Asset Management and submitted to the ISB for review. The KBC Asset Management Financial Risk Committee is accountable with regard to the implementation. However, all staff involved are responsible for its implementation, both within the countries and at the level of relevant group departments	
Reference to third-party agreements	For all our Responsible Investing funds, we apply the standards of the Towards Sustainability Labelling Agency, which is a not-for-profit association incorporated under Belgian law. The label is awarded to financial products that are compliant with the Agency's Quality Standard for sustainable and responsible financial products, ensuring that all labelled products contain a minimum of sustainability elements.	
Consideration key stakeholders	This policy has, on top of the challenge by the ISB, been presented to KBC Asset Management's external Responsible Investing Advisory Board	
Areas addressed:		
Climate change mitigation	Yes	This policy addresses climate change mitigation by setting portfolio targets on greenhouse gas emissions as well as by investing in green bonds
Climate change adaptation	No	-
Energy efficiency	No	-
Renewable energy deployment	Yes	This policy addresses renewable energy deployment by setting portfolio targets on greenhouse gas emissions as well as by investing in green bonds
Other climate change-related areas	No	-

### **Exclusion Policy for Responsible Investing funds**

KBC Asset Management invests systematically in companies or governments from responsible investing universes, whereby all issuers must be screened on a predetermined set of criteria. The Responsible Investing research team of KBC Asset Management defines these criteria, based on the advice of the Responsible Investing Advisory Board.

In this policy, all negative screening criteria (exclusion criteria) are described. The negative screening entails exclusion of:

- issuers that do not align with the exclusion policies from the responsible investment universe by the (sub-)fund or issuers that are manually excluded based on the advice of the Responsible Investing Advisory Board;
- issuers involved in activities such as fossil fuels, the tobacco industry, arms, gambling and adult entertainment from the (sub-)fund's investment universe;
- investments in financial instruments linked to livestock and food prices;
- all companies that derive at least 5% of their revenues from the production or 10% of their revenues from the sale of fur or special leather.

We do not accept in our (sub-)fund's investment universe issuers based in countries that:

- encourage unfair tax practices;
- seriously violate fundamental principles of environmental protection, social responsibility and good governance.

A review of the negative screening criteria is part of the yearly review of the responsible investing methodology.

### **Exclusion Policy for Responsible Investing Funds**

Scope	This policy is applicable to all Responsible Investing funds managed by (all subsidiaries of) KBC Asset Management	
Most senior level accountable	This policy is formally approved by the ExCo of KBC Asset Management and submitted to the ISB for review. The KBC Asset Management Financial Risk Committee is accountable with regard to the implementation. However, all staff involved are responsible for its implementation, both within the countries and at the level of relevant group departments	
Reference to third-party agreements	For all our Responsible Investing funds, we apply the standards of the Towards Sustainability Labelling Agency (see Investment Policy for Responsible Investing Funds above)	
Consideration key stakeholders	This policy has, on top of the challenge of the ISB, been presented to KBC Asset Management's external Responsible Investing Advisory Board	
Areas addressed:		
Climate change mitigation	Yes	This policy addresses climate change mitigation by excluding issuers that are involved in fossil fuels
Climate change adaptation	No	-
Energy efficiency	No	-
Renewable energy deployment	Yes	This policy addresses renewable energy deployment by excluding issuers that are involved in fossil fuels
Other climate change-related areas	No	-

### **Actions and resources in relation to climate change policies (2.2.2.2)**

In addition to having policies in place to prevent, mitigate and remediate actual and potential impacts, and to address risks, we also take numerous measures to put our commitment to climate into practice. Within the framework of our Sustainable Finance Programme, we are working on our environmental impact while mitigating environmental risks. At the start of the programme in 2019, its focus was solely on climate. Since 2022, it has been expanded to also include other environmental themes such as biodiversity and water. We refer to the sections on these matters (section 2.3. on water; section 2.4 on biodiversity) for more information. Our key climate-related actions are described below.

#### **Managing our own footprint**

Each year, the GHG emissions from our own operations are measured and actions are taken, such as:

- implementing an ISO 14001 environmental management system in all core countries to manage and reduce direct environmental impact;
- reducing our energy need and transitioning to renewable energy (both self-generated and purchased);
- leveraging renovations and relocations to reduce our environmental impact and adopt environmentally friendly alternatives;
- supporting the shift to greener employee mobility by implementing a Teleworking Policy in all our core countries, incentivising (electric) bicycles for commuter travel, promoting public transport and supporting the transition to a greener and electric car fleet;
- reducing waste production, and paper and water consumption.

This enables us to follow up on our own footprint targets and to provide guidance for local actions where needed. Examples are:

- replacing cooling installations by heating pumps in Belgium;
- reusing residual heat from the server room in our headquarter buildings in Prague using a heat pump installation.

### Managing our own footprint

Scope	The GHG inventory is made for the entire group, for all subsidiaries over which there is operational control
Time horizons	Yearly actions in order to achieve our longer term targets – see section 2.2.3.1 (climate-related targets)
Quantitative and qualitative information	Sections 2.2.3.1 (climate-related targets), 2.2.3.2 (emissions) and 2.2.3.3 (offsetting)
Climate change mitigation actions by decarbonisation lever	<ul style="list-style-type: none"> <li>• Energy efficiency (isolation, telework, energy-efficient data centres)</li> <li>• Switch to renewable energy (gas transition plans, heating plans)</li> <li>• Increase our own energy production (photovoltaic panels, heat pumps)</li> <li>• Switch to low-carbon transport (encouraging public transport, bicycle leasing, electrification of the company fleet)</li> </ul>
Achieved GHG emission reductions	Section 2.2.3.1 (climate-related targets)
Expected GHG emission reductions	Section 2.2.3.1 (climate-related targets)
Ability to implement	Fully integrated into our regular operations and follow-up at head office

### Yearly calculation of portfolio emissions and steering of the local implementation of loan portfolio decarbonisation

Similar as for our own emissions, our loan portfolio emissions are measured and actions are taken based on this measurement.

Key actions implemented for all sectors and products for which climate lending targets are in place include:

- financing zero/low-carbon activities or solutions (e.g., renewable energy projects, electric vehicles or low-to-zero-emission buildings);
- financing to support decarbonisation efforts (e.g., renovation loans) or transition efforts;
- exiting the relationship.

### Yearly calculation of portfolio emissions and steering of the local implementation of loan portfolio decarbonisation

Scope	Key action with regard to the yearly calculation of portfolio emissions is implemented across all lending activities (including operational and financial leasing) within KBC. Key action with regard to the local implementation of loan portfolio decarbonisation is performed on specific target sectors as further defined in section 2.2.3.1.2
Time horizons	The targets range up to 2050 with intermediate targets being set in 2030. The key actions apply consistently over this time horizon
Quantitative and qualitative information	Sections 2.2.3.1 (climate-related targets) and 2.2.3.2 (emissions)
Climate change mitigation actions by decarbonisation lever	<ul style="list-style-type: none"> <li>• Supporting the build-out of a renewable energy system (energy targets) and phasing out fossil fuel-based energy production (energy and thermal coal targets)</li> <li>• Supporting the decarbonisation of road transport activities (vehicle financing targets)</li> <li>• Supporting the decarbonisation of the building sector (real estate targets)</li> <li>• Supporting the decarbonisation of the agricultural sector (agriculture targets)</li> <li>• Supporting the decarbonisation of the cement sector (cement targets)</li> <li>• Supporting the decarbonisation of the steel sector (steel targets)</li> <li>• Supporting the decarbonisation of the aluminium sector (aluminium targets)</li> </ul>
Achieved GHG emission reductions	Section 2.2.3.1 (climate-related targets)
Expected GHG emission reductions	Section 2.2.3.1 (climate-related targets)
Ability to implement	Our ability to implement the key actions mainly depend on a governmental policy environment that fully accommodates societal decarbonisation in line with the Paris Agreement goals

### **Continuous monitoring of GHG reduction target of Responsible funds**

The average GHG intensity of Responsible funds is continuously measured and we also make simulations when considering trades. This enables the portfolio manager to continuously monitor the GHG reduction target specifically for that portfolio. Responsible funds must comply with the target at all times, or adjust their portfolio composition in order to comply, in a timeframe that is in the best interest of the client and taking into account other factors such as liquidity.

#### **Continuous monitoring of GHG reduction target of Responsible funds**

Scope	Responsible funds make up the bulk of the Responsible Investing funds (with the exception of specific thematic funds), representing more than 40% of direct client money (see glossary of financial ratios and terms for an explanation of 'direct client money')
Time horizons	Monitoring at individual portfolio level is performed on a daily basis. The GHG reduction targets have a horizon until 2030 and are recalculated every quarter to arrive in a linear way at the 50% reduction by 2030 after an initial 30% reduction. The overall target is a weighted average of all individual funds having a GHG reduction target.
Quantitative and qualitative information	Section 2.2.3.1 (climate-related targets)
Climate change mitigation actions by decarbonisation lever	Certain issuers or sectors are excluded by the exclusion policy, but other than that it is up to the portfolio managers of the Responsible fund to take into account the emission intensities and their impact on the weighted average at portfolio level by making investment decisions
Achieved GHG emission reductions	Section 2.2.3.1 (climate-related targets)
Expected GHG emission reductions	Section 2.2.3.1 (climate-related targets)
Ability to implement	The actual achievement of targets depends on the evolution of GHG intensities of issuers in the benchmark of these funds. The update of GHG intensity numbers of issuers is dependent on our data providers

### **Continuous monitoring of GHG reduction target of KBC Insurance's investment portfolio**

We calculate on a regular basis the weighted average GHG intensity of KBC Insurance's own investments. This is used to monitor our path towards the reduction target for KBC Insurance's own corporate investments.

#### **Continuous monitoring of GHG reduction target of KBC Insurance's investment portfolio**

Scope	Corporate Investments (corporate bonds and listed equity, excluding unit-linked investments) made by all insurance entities
Time horizons	Continuous monitoring
Quantitative and qualitative information	Included annually in this Sustainability Statement, see sections 2.2.3.1.4 and 2.2.3.2.2
Climate change mitigation actions by decarbonisation lever	New investments in certain issuers or sectors are excluded by the Responsible Investing Exclusion Policy which is also applicable to all new own investments. In addition to exclusions, the portfolio managers can take into account the emission intensities and their impact
Achieved GHG emission reductions	See section 2.2.3.1 (climate-related targets)
Expected GHG emission reductions	See section 2.2.3.1 (climate-related targets)
Ability to implement	The achievement of this target depends on the GHG intensity of our investments/the overall market and our ability to intervene given other constraints (e.g., accounting classifications)

### Climate White Papers

We assess the impacts, dependencies and associated risks and opportunities of different environmental challenges in the sectors in scope of our White Paper approach. This continuous and cyclical process feeds into decision-making around future actions with respect to policy and/or client engagement strategies, policy establishments or changes and – where relevant – the establishment or change of targets.

### Climate White Papers

Scope	The White Papers apply across all lending activities (including operational and financial leasing) and insurance activities within KBC
Time horizons	This is a continuous process. Each year, the White Paper scopes and sectors or themes are defined and decided at management level (ISB). In deciding the White Paper scopes, the ISB takes into account the materiality of evolutions which take place in sectors or environmental domains as well as the materiality of the exposures to the sectors associated with those evolutions
Climate change mitigation actions by decarbonisation lever	Each White Paper addresses the need to quickly follow-up on decarbonisation evolutions in high-carbon-intensive activities and industries. As a main lever we use the risk and opportunity assessments that come out of the White Paper assessments, to feed into strategy and policy decisions and decisions on next actions to be taken in terms of risk/opportunity management and engagement. One main decarbonisation lever is addressed here, i.e. to support the transition of the targeted sectors/activities to a more environmentally and climate-friendly state. This is done by either stopping the financing of environmentally polluting activities or by supporting the transition of sectors to a low-carbon state
Ability to implement	Our ability to implement the key actions mainly depends on a policy environment that fully accommodates societal decarbonisation in line with the Paris Agreement goals (this includes, among other things, timely government action to stimulate sustainable technologies as well as more sustainable mobility, living and lifestyle)

### Green bond issuance

We issue Green Bonds whose proceeds are used to finance projects that have a positive impact on the environment by avoiding or reducing the emissions of greenhouse gases. There are currently two bonds issued outstanding under our former Green Bond Framework (total amount of 1.25 billion euros) and one bond issuance in 2024 under the updated Green Bond Framework (750 million euros). This update was done in November 2023 (adding eligibility criteria, aligning with the ICMA (International Capital Markets Association) Green Bond Principles 2021 and further aligning with the EU Taxonomy criteria for environmentally sustainable economic activities when practically feasible). More information on our Green Bond Framework is available at [www.kbc.com](http://www.kbc.com). KBC plans to issue Green bonds in the future, with a view to contributing to a more sustainable future.

### Green bond issuance

Scope	All green bonds issued by KBC
Time horizons	Green Bond 2 of 500 million euros was issued on 16 June 2020 and will expire on 16 June 2027 Green Bond 3 of 750 million euros was issued on 1 December 2021 and will expire on 1 March 2027 Green Bond 4 of 750 million euros was issued on 27 March 2024 and will expire on 27 March 2032
Climate change mitigation actions by decarbonisation lever	Decarbonisation levers are: <ul style="list-style-type: none"><li>• energy-efficient buildings – mortgage loans and commercial loans to (re)finance new and existent residential buildings in Belgium</li><li>• renewable energy – loans to (re)finance equipment, development, manufacturing, construction, operation, distribution and maintenance of renewable energy sources in the EU and the UK</li><li>• clean transportation – (re)financing of the purchase, renting, leasing and operation of zero-emission vehicles in Belgium</li></ul>
Achieved GHG emission reductions	The avoided emission reductions are reported each year in our Green Bond Impact Report (integrated in The Green and Social Bond Report as of reporting year 2024), published on our website
Expected GHG emission reductions	Future quantification is uncertain
Ability to implement	The implementation of actions in the future will depend on the availability of sustainable (mostly renewable energy) projects, demand for electric vehicles and energy efficient buildings and on government measures (such as incentive schemes)

### **Integrating climate and other ESG risks into the risk management framework**

The KBC Risk Management Framework (RMF) covers all (material) risks KBC is exposed to, including ESG risks (see the 'How do we manage our risks?' section in this report). The main building blocks of the RMF are risk identification, risk measurement, setting and cascading risk appetite, risk analysis, reporting and follow-up. We identify ESG risks in our internal risk taxonomy as key risks related to our business environment which manifest themselves through all other traditional risk areas, such as credit risk, technical insurance risk, market risk, operational risk and reputational risk. As such, we do not regard ESG risks as stand-alone risk types.

We are making continuous efforts to further integrate ESG risks into our RMF and underlying risk management processes. Actions are taken across the group and implemented for all our activities in all our core countries. Depending on the context, our actions relate to risk management for our own operations, upstream activities (e.g., third-party risk management) or downstream activities (e.g., credit, market, insurance risk in our lending, investment and insurance portfolios).

A number of key actions are listed below.

- *Risk identification and materiality assessment:* we use a variety of approaches to identify ESG risks in the short term (0- to 3-year horizon), the medium term (3- to 10-year horizon) and the long term (beyond 10-year horizon). To ensure proactive risk identification, several processes are in place such as:
  - the ERIM (see section 1.4.1 on financial materiality assessment) and 2024 pilot risk identification exercises on social risks. We perform these assessments from a group perspective but also construct separate maps for the banking, insurance and asset management activities. For the ERIM, further breakdowns are made for our core countries;
  - the New and Active Product Process (NAPP) (see below);
  - the use of a sectoral Environmental & Social Heatmap in the loan origination and review process;
  - consideration of reputational ESG risk scores for large companies in vulnerable sectors;
  - ESG risk assessments executed in the context of credit underwriting for corporates and outsourcing;
  - deep dives on climate and environmental risks and opportunities (our White Papers). These are prepared for climate-relevant sectors and product lines and for emerging environmental topics.
- *Risk measurement and stress testing:* we make use of a series of methodologies to strengthen our ability to identify, measure and analyse ESG-related risks. We complement the application of methodological tracks (scenario-based) with internal scenario analysis and stress testing. Furthermore, we are integrating ESG risk drivers into our internal stress test exercises (considering availability of data and quantification methodologies).
- *Risk appetite:* ESG has been included in our Risk Appetite Statement at the highest level via a specific ESG risk appetite objective. When considering climate and other ESG risks in our risk appetite process, we do not only focus on short-term impacts, but also take extended time horizons into consideration. Potential short-, medium- and long-term impacts as identified in our risk identification exercises provide input for our risk appetite discussions so that (early) warning signals can be given in case of expected material impacts (for all time horizons) with the aim of steering the strategic debate and initiating risk-mitigation actions in a timely manner. KBC's risk appetite is supported by our groupwide policies and sustainability targets (see the different sections on policies and targets under each topic). These policies define our risk playing field and are translated into underlying standards such as the Credit Risk Standards for Responsible and Sustainable Lending and the Investment Policy.
- *Risk analysis, monitoring and follow-up:* ESG-related data is increasingly included in both internal and external reporting (e.g., EBA Pillar 3 ESG disclosures). ESG risks are well-integrated and extensively addressed in several of our main risk management reports (e.g., Internal Capital Adequacy Assessment Process (ICAAP) reporting reassessment of capital adequacy, Integrated Risk Report) which are distributed to the ExCo, the RCC and the Board.

Specifically for climate risk, additional to the above, we highlight the following:

- In the ERIM, a dedicated Impact Map is in place for Climate Change, considering several physical and transition risk drivers.
- To assess our climate-related transition risks, we leverage industry practices such as PACTA (to measure the alignment of our corporate industrial loan portfolio with the Paris Agreement climate goals), TRUCOST (for our Asset Management and the insurer's investment portfolio) and PCAF (to estimate the greenhouse gas emissions of our loan, investment and insurance portfolios). These provide further insights into the impact of climate change on our business model, as well as the impact of our lending, investment and insurance activities on the environment.
- Physical risk assessments have been performed for several acute and chronic physical hazards (e.g., flood, drought, heat stress, wildfires). The assessments were geographically tailored to the territories of our core countries. In particular, the impact of flood risk on our mortgage and property insurance portfolios was estimated.
- Climate transition and physical risk drivers have already been integrated into several internal stress test exercises, e.g., in reverse stress testing, stress testing done in the context of ICAAP/ILAAP/ORSA (see 1.3.3.2 in the 'How do we manage our risks?'

section in this report on climate change resilience analysis). Both short-term and long-term climate scenarios are being considered. Climate stress test exercises and usage of climate scenarios are continuously enhanced following new insights from, for instance, our internal ERIM or other methodological tracks which help us to better translate the impact of climate pathways into financial parameters. These methodologies will also enable us to gradually improve credit underwriting and investment policies, and support us in engaging with our clients.

- In support of our risk appetite process and as part of our internal monitoring, we introduced a set of climate-related KRIs (Key Risk Indicator). These are defined for the most material transition and physical risks as identified in the ERIM, covering a large part of KBC's activities and portfolios. They are integrated into a Climate Risk Dashboard which is presented to the Board (every six months) as part of Integrated Risk Reporting.

#### **New and Active Product Process (NAPP)**

The NAPP is a group-wide, formalised process to identify and mitigate product-related risks, both for KBC and for its clients. No products, processes or services can be created, purchased, changed or sold without approval in line with NAPP governance. Furthermore, changes in the internal and external environment need to be monitored in order to trigger an ad hoc review of the product or service when needed. The Risk department also conducts periodic assessments of the impact of the expanded and/or updated product and service offering on the group's risk profile. As the NAPP covers all risk types, the NAPP standard is positioned as a key building block of the Risk Management Framework and applies to all material subsidiaries which provide financial services. It covers all products and services offered by these subsidiaries and all client-facing processes.

More specifically, the NAPP aims to:

- ensure fair treatment of the client;
- safeguard the strategic fit of products/services;
- pro-actively identify and mitigate risks related to products, services and changes to client-facing processes which might negatively impact the client and/or KBC;
- comply with regulation.

It is hence also considered as an important tool to mitigate several ESG risks (including risks related to consumer protection and greenwashing). The Board at group and local level is accountable for the design of a sound NAPP governance and for the implementation thereof throughout the group. NAPP committees are installed to debate and decide whether products, services and changes in client-facing processes are ready for launch based on advice and, where appropriate, conditions imposed by a set of advisory functions such as Risk, Compliance, Legal and the Actuarial Function Holder (for insurance products). The NAPP Committee follows up on the fulfilment of the risk-mitigating actions.

Sustainability and climate-related policies are explicitly taken into account when deciding on new products or services through the NAPP:

- Particular attention is paid to the adequate 'green' labelling of newly developed products, aligned with regulatory frameworks such as the EU Taxonomy and the ICMA Green Bond framework. A mandatory advice of sustainability experts is required when the product is labelled as 'green' or referring to external frameworks which claim environmental or sustainable contribution;
- Several ESG risks are assessed by the risk and compliance function, as part of the mandatory risk and compliance advice within NAPP.

## Climate change metrics and targets (2.2.3)

### Targets related to climate change mitigation and adaptation (2.2.3.1)

We focus on diminishing our negative impact on climate change through the reduction of our direct and indirect carbon footprint. We have set various climate-related targets and closely monitor our progress. The targets and corresponding emission intensity metrics for our loan portfolio also serve as a tool to monitor climate-related transition risk. These intensity metrics are also monitored as part of our Climate Risk Dashboard to assess credit and reputational risk (see section 2.2.2.2).

In this section, our climate-related targets are described separately for our own carbon footprint, our loan portfolio and our investment portfolios.

Our own carbon footprint includes:

- Scope 1: direct emissions from fuel combustion and refrigerant gases in our office buildings and from our company-owned car fleet (including private use);
- Scope 2: indirect emissions from purchased energy (electricity, heat, cooling and steam consumption);
- Scope 3: indirect emissions from business and commuter travel, and emissions from sources over which we have direct operational control (such as paper and water consumption and waste generation).

Scope 3 Category 15 emissions include the indirect emissions related to our financing, investing and insurance activities. For financial institutions, this is the most significant emission category.

We refer to section 2.2.3.2 for more detailed information on our GHG emissions as defined above.

#### Own carbon footprint targets (2.2.3.1.1)

The ambition to reduce our negative impact on the environment is stipulated as a key objective in the Environmental Policy. The targets for our own carbon footprint underpin this objective. Achieving these targets largely depends on our ability to reduce the indirect impact from our own operations. Engaging with our suppliers is a prerequisite here. Through the Sustainability Code of Conduct for Suppliers (see section 4.1.1.1), we ensure that our suppliers support our climate-related objectives.

Climate-related targets related to our own carbon footprint are set in collaboration with stakeholders in our core countries. All of our environmental targets have been reviewed and approved by the ISB and ExCo and endorsed by the Board.

<b>Own carbon footprint</b>	<b>Base year</b>	<b>Unit</b>	<b>Base year value</b>	<b>2024</b>	<b>Target year</b>	<b>Target value</b>	<b>Progress in line with target?</b>
CO <sub>2</sub> e emissions from own operations	2015	tCO <sub>2</sub> e	170 735	53 934	2030	34 147	Yes
% change			-	-68%		-80%	Yes
Renewable electricity in % of purchased electricity	-		100%	100%	2030	100%	Yes

The GHG Protocol Corporate Standard serves as the basis for determining the scope of the GHG emissions reduction targets for our own carbon footprint. The target for CO<sub>2</sub>e emissions includes our Scope 1 and 2 emissions as well as a selection of Scope 3 emission categories. The selected Scope 3 GHG emissions include the indirect emissions from purchased goods and services (category 1), waste generated (category 5), business travel (category 6) and employee commuting (category 7), categories over which we have direct operational control and which we can use to raise awareness amongst staff. This is in line with the Scope 3 categories included in our GHG emissions inventory as described in section 2.2.3.2. Our GHG emissions inventory as well as our GHG reduction targets cover the following greenhouse gases: CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O, PFC's, HFC's, SF<sub>6</sub> and NF<sub>3</sub>. With respect to the scope of entities covered by the targets, we note that they do not fully cover the scope of our GHG inventory. The targets for our own carbon footprint cover all entities included in our financial consolidation to the extent that they operate within our bank-insurance business context, whereas our GHG inventory also includes entities that are not fully consolidated and entities with activities that are not related to our bank-insurance business context.

In 2023, we put a Recalculation Policy in place for both our own carbon footprint as well as for our loan portfolio climate targets. The procedure is based on the Greenhouse Gas Protocol. In general, we aim for continuity in the baselines we use to assess the direct and indirect greenhouse gas emissions targets. Three situations can possibly trigger a base-year recalculation:

- Structural non-organic changes via acquisitions, divestures or mergers;
- Calculation methodology changes, including changes in the assumptions used;
- The discovery of data, calculation or methodological errors.

Improvements in data quality are not part of our recalculation criteria. An evaluation to recalculate the base year is triggered if the assessment shows that the cumulative effect(s) of these three situations in scope exceed(s) a threshold of 5% change versus the actuals of a KPI. The Recalculation Policy is described in section 2.2.2.1.

For financial year 2024, there were some small changes in the underlying measurement methodologies related to our own carbon footprint (see section 2.2.3.2.1 for more details). Since the combined impact of these changes was below our recalculation threshold, no restatement of the target or recalculation of the previous year's figures was needed.

The GHG emissions reduction target for our own carbon footprint is set using a bottom-up approach gathering feedback from the core countries on their current decarbonisation approach and their expectations. It has been tightened over the years, reflecting the progress we have made and is set, since 2020, at -80% by 2030 (i.e. an annual linear reduction rate of 5.33%). For the calculation and monitoring of the target, Scope 2 market-based emissions are considered. Furthermore, this target is combined with a commitment to offset all our remaining own emissions as from 2021, as described in section 2.2.3.3. This ambition is aligned with the CDP technical note on science-based targets, which states that GHG emissions reduction targets need to meet a minimum annual linear reduction rate of 4.2% to be considered 1.5°C-aligned.

Our objective to reach 100% renewable electricity consumption in own operations by 2030 underpins our GHG emissions reduction targets. To determine the share of renewable electricity consumption in our own operations, we follow the same methodology and reporting process as the calculation of our own carbon footprint (see section 2.2.3.2.1), relying on consumption data collected from the local subsidiaries in the core countries.

We monitor the progress on our targets on a yearly basis and received a reasonable assurance on our disclosed target metrics since 2016. Despite some slowdown in the reduction rate over the past two years, we are still well on track for our target. The efforts to make our buildings more energy efficient and to electrify our company-owned fleet are starting to bear fruit, but we still have some way to go to reduce emissions from commuter travel.

#### **Loan and lease portfolio targets (2.2.3.1.2)**

The environmental targets set on our lending portfolios must be understood in the overarching context of KBC's commitment to align our activities with the Paris Agreement goal of limiting global warming to well below 2°C, striving for 1.5°C. Under our Sustainability Policy Framework, we have set up sectoral policies detailing our stance on activities with a harmful impact on the environment, human rights and other sustainability-related issues. The objectives and criteria formulated in our policies underpin the achievement of our GHG emissions reduction targets, as described in the table below, specifically the ban on financing certain fossil fuel activities and our stringent lending criteria for steel, cement and aluminium producers. These policies are applicable to all of our business units, consistent with the scope of our climate targets and our financial accounting consolidation. For more detailed information on our climate-related policies, see section 2.2.2.1.

All of our environmental targets (including non-GHG emissions reduction targets) have been reviewed and approved by the ISB, ExCo and endorsed by the Board. Furthermore, we have consulted with all core countries to define our loan portfolio projections (see below in the description of our target-setting approach). These projections include estimates on the growth of our portfolio and consider the local regulatory landscape that was in place at the time we set our targets. Our targets therefore depend to a large extent on timely governmental action and also reflect the engagement with our clients, especially in sectors with a limited number of highly emitting counterparties such as steel, cement and aluminium.

Overview of the climate-related targets for our loan and lease portfolios	Target based on granted or outstanding loan exposure	Base year	Base year Unit	2024	2030	2050	Progress in line with target? <sup>3</sup>
					Target	Target	
Thermal coal							
Direct exposure	Granted	2016	m euros	16	0	0	Yes
Energy							
Share of renewables in total energy loan portfolio (excluding transmission and distribution)	Granted	2021	%	63%	67%	75%	-
Electricity – GHG intensity <sup>1</sup>	Outstanding	2021	kg CO <sub>2</sub> e / MWh	210	93	127	49
% change		2021	%	-	-56%	-39%	-77%
Energy whole sector – GHG intensity <sup>2</sup>	Outstanding	2021	t CO <sub>2</sub> e / m euros	453	265	300	82
% change		2021	%	-	-42%	-34%	-82%
Real estate							
Residential real estate – GHG intensity <sup>2</sup>	Outstanding	2021	kg CO <sub>2</sub> e / m <sup>2</sup>	50	45	29	7
% change		2021	%	-	-10%	-43%	-85%
Real estate (whole sector) – GHG intensity <sup>2</sup>	Outstanding	2021	t CO <sub>2</sub> e / m euros	27	23	17	8
% change		2021	%	-	-15%	-38%	-72%
Agriculture							
GHG intensity <sup>2</sup>	Outstanding	2021	t CO <sub>2</sub> e / m euros	1405	1 059	1 103	934
% change		2021	%	-	-25%	-21%	-34%
Transport							
Passenger car loan and financial leasing – GHG intensity <sup>1</sup>	Outstanding	2021	g CO <sub>2</sub> / km	139	124	81	0
% change		2021	%	-	-11%	-42%	-100%
Light commercial vehicle loan and financial leasing – GHG intensity <sup>1</sup>	Outstanding	2021	g CO <sub>2</sub> / km	208	205	145	33
% change		2021	%	-	-1%	-30%	-84%
Passenger car operational leasing – GHG intensity <sup>1</sup>	Outstanding	2021	g CO <sub>2</sub> / km	133	77	25	0
% change		2021	%	-	-42%	-81%	-100%
Light commercial vehicle operational leasing – GHG intensity <sup>1</sup>	Outstanding	2021	g CO <sub>2</sub> / km	196	186	132	19
% change		2021	%	-	-5%	-33%	-90%
Cement							
GHG intensity <sup>2</sup>	Granted	2021	t CO <sub>2</sub> e / t cement	0.69	0.62	0.58	0.22
% change		2021	%	-	-9%	-16%	-68%
Steel							
GHG intensity <sup>2</sup>	Granted	2021	t CO <sub>2</sub> e / t steel	1.34	1.50	1.15	0.59
% change		2021	%	-	+12%	-14%	-56%
Aluminium							
GHG intensity <sup>2</sup>	Granted	2021	t CO <sub>2</sub> e / t aluminium	0.59	0.21	Stay well below the global sectoral intensity climate benchmark	
% change		2021	%	-	-63%		

<sup>1</sup> Includes Scope 1 emissions

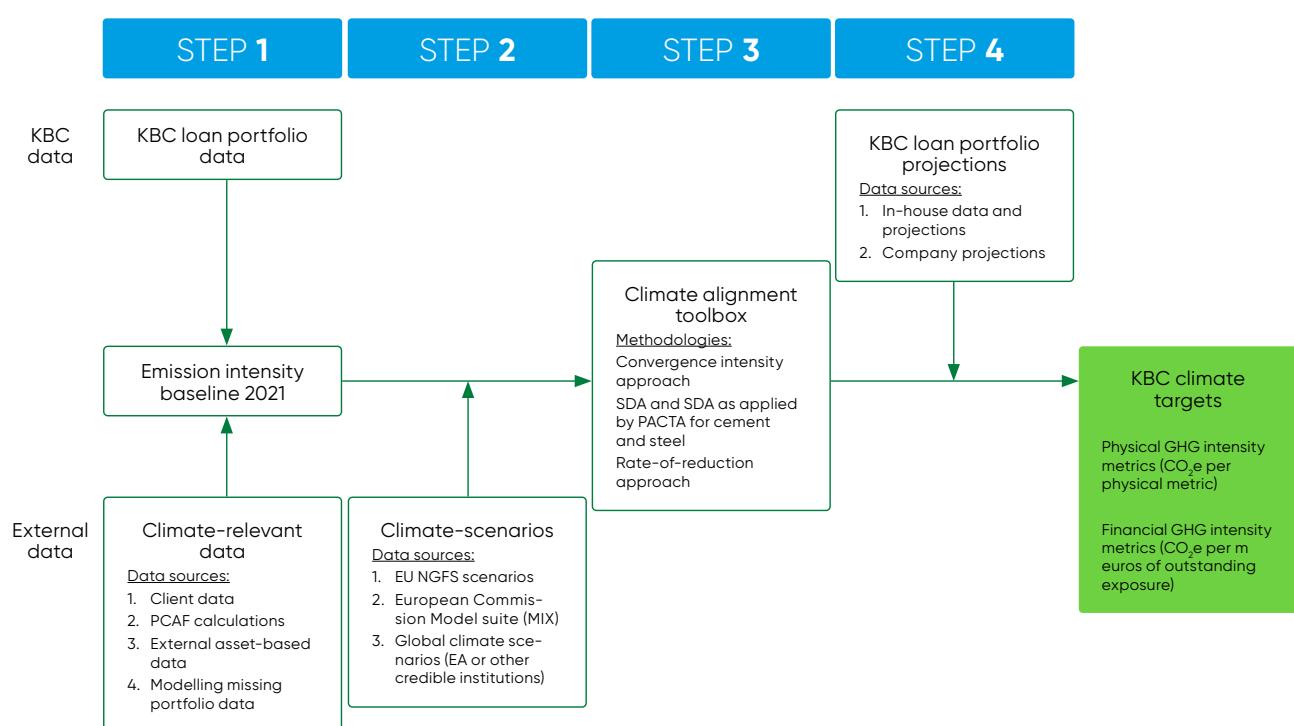

<sup>2</sup> Includes Scope 1 and 2 emissions

<sup>3</sup> We measure this by comparing the 2024 values against the values of the KBC portfolio-specific and scenario-based sectoral decarbonisation pathways (KBC benchmark value) for that same year. 'Yes' reflects either of the following options: the target is reached, the progress is at or below our target level, or the value is not more than 5% above our 2024 benchmark value. 'No' reflects that the value is more than 5% above our 2024 benchmark value. The table shows rounded figures, but the delta between 2024 measurements and benchmark values, as well as the resulting progress statement, are based on unrounded calculations.

We note that our GHG emissions reduction targets are not expressed in absolute GHG reductions. Instead, we use sector-specific carbon intensity metrics since we believe this is the most effective way to guide and track the decarbonisation efforts in our diverse loan and lease portfolios. The GHG emissions reduction targets for our lending portfolios cover the Scope 1 and, if applicable, the Scope 2 GHG emissions of the borrowers (as indicated in the table). The Scope 3 GHG emissions of our borrowers are not included in the target boundaries. Consistency of our targets with our inventory boundaries is ensured by the fact that we apply standard calculation methodologies as provided by the PCAF global standard and underlying data sources (client data, PACTA, PCAF emission factors). In addition, as described under 2.2.3.1.1, the Recalculation Policy applies to our loan portfolio to safeguard this consistency.

Calculating and setting climate-relevant targets requires a very diverse set of tools. This section aims to provide transparency about our target-setting approach for our lending portfolio and outlines their main conceptual building blocks.

#### Scenario-based GHG emissions reduction targets

As part of our engagement in the Collective Commitment to Climate Action (CCCA), we have set GHG emissions reduction targets for our lending portfolios, following the UNEP FI guidelines. These require the application of widely accepted science-based decarbonisation scenarios in line with the temperature goals of the Paris Agreement. Building on these requirements, we developed a four-step approach for science-based target setting, as outlined below:

- Step 1: we combined our loan portfolio data with climate-relevant data for each sector, thereby calculating portfolio CO<sub>2</sub>e intensity metrics, either related to physical units (e.g., kgCO<sub>2</sub>e/MWh, m<sup>2</sup>, ton) or, where such data was not available, financial units (e.g., tCO<sub>2</sub>e/mEUR outstanding exposure). This calculation allowed us to determine the baseline values for our targets which were set for the base year 2021.
- Step 2: we selected the relevant climate scenarios from which the decarbonisation pathways of our loan portfolios could be deducted. In accordance with our engagement in the CCCA, we ensured the climate scenarios' consistency with the well-below 2°C temperature goal with no/low overshoot as well as their scientific reliability and granular sectoral coverage. We also prioritised scenarios with regional specific pathways reflecting our prominent EU focus. Consequently, we used regional NGFS (Network for Greening the Financial System) climate scenarios, where available, and EU PRIMES model data (used to calculate the EU Commission Net Zero 2050 – MIX scenario) or global scenarios. Please note that, for benchmarking purposes,

we performed the analyses on more than one set of scenarios and then selected the best suited ones. The final scenarios selected are included in the table below.

- Step 3: we selected the best suited target-setting methodology and alignment calculation approach for each portfolio. For physical intensity metrics, we followed the convergence intensity approach, also known as the Sectoral Decarbonisation Approach ('SDA', see table) whereby the CO<sub>2</sub>e intensity of our portfolio needs to converge towards the sector intensity target by the end date specified in the scenario. For the agricultural sector, where we selected a financial carbon intensity metric, we used the rate-of-reduction approach, which consists in applying the sectoral emission reduction rates relevant to the sector.
- Step 4: we projected the evolution of the relevant portfolios by combining in-house expert-based input (e.g., by incorporating redistribution effects on specific asset classes or estimated portfolio effects of government policies), company projections (i.e. by incorporating the implementation of public climate commitments taken on by companies in our portfolio) and our own proposed actions (i.e. focusing on stimulating positive evolutions, limiting negative impacts or a combination of both). This allowed us to assess the future alignment of our portfolios with the respective normative climate scenario benchmarks.

#### **Non-scenario-based GHG emissions reduction targets**

We have also defined 'partially science-based' targets for our loan portfolio, exclusively monitored through financial carbon intensity metrics. These targets are derived from the level of ambition of our science-based targets described above and, hence, are not directly based on forward-looking scenario-based benchmark constructions:

- Energy (whole sector), expressed in tCO<sub>2</sub>e/mEUR outstanding loan exposure;
- Commercial real estate and mortgages (whole sector excluding pure commercial development), expressed in tCO<sub>2</sub>e/mEUR outstanding.

#### **Other targets**

We have set two specific environmental targets related to our energy loan portfolio:

- A phase-out target for direct thermal coal-related activities (thus including electricity generation, district heating and mining), which was set in 2016 and achieved in 2023. The target was measured in absolute financial exposure value (millions of EUR granted). This target is aligned with the International Energy Agency (IEA) Net Zero Emissions by 2050 which requires a full phase-out of unabated coal by 2040.
- A target for the share of renewable energy in our total energy loan portfolio, which was set in 2021 and is measured as a percentage of our total energy loan portfolio (excluding transmission and distribution). This target is not science-based and does not rely on scientific climate scenarios.

### Target-setting methodologies, significant assumptions and scientific evidence

White Paper sectors	(Sub)sector/product line within the scope of target setting	Measurement unit	Based on conclusive scientific evidence	Scenario reference/name				Policy ambition	Target-setting method	Is the target externally assured?	Financed emissions in scope PCAF (in Mt CO <sub>2</sub> e) score <sup>1</sup>
				Institution	Net Zero 2050	1.5°C	-				
Energy	Full exit from direct thermal coal-related financing	Millions of EUR granted	Yes	IEA	Net Zero 2050	1.5°C	-	-	-	-	-
	Share of renewables in total energy loan portfolio (excluding transmission and distribution)	%	No	-	-	-	-	-	-	-	-
	Energy (whole sector)	tCO <sub>2</sub> e/millions of EUR outstanding	Yes	-	-	-	-	-	No	1 326 299*	3.5
	Electricity	kgCO <sub>2</sub> e/MWh	Yes	NGFS (phase 2)	Below 2°C	1.7°C	SDA	No	913 570**	2.6	
Real Estate <sup>2</sup>	Commercial real estate and mortgages (whole sector excl. pure commercial development)	tCO <sub>2</sub> e/millions of EUR outstanding	Yes	-	-	-	-	No	1 985 288*	3.0	
	Mortgages and commercial residential real estate	kgCO <sub>2</sub> e/m <sup>2</sup> /year	Yes	NGFS (phase 2)	Below 2°C	1.7°C	SDA	No	1 566 010*	3.0	
Transport	Vehicle loans and financial lease	Passenger cars	Yes	European Commission	MIX (based on the EU PRIMES model)	Net Zero 2050 (i.e. 1.5°C-aligned)	SDA	No	249 696**	3.4	
		Light commercial vehicles	Yes						119 305**	3.6	
	Vehicle operational lease	Passenger cars	Yes						101 319**	1.0	
		Light commercial vehicles	Yes						21 775**	1.1	
Agriculture	Agriculture (whole sector)	tCO <sub>2</sub> e/millions of EUR outstanding	Yes	NGFS (phase 2)	Below 2°C	1.7°C	Rate-of-reduction approach	No	5 497 085*	4.9	
Building and construction	Cement producers	tCO <sub>2</sub> e/t cement	Yes	IEA	ETP 2020 SDS	1.7°C	SDA	No	64 180*	3.2	
Metals	Steel producers	tCO <sub>2</sub> e/t steel	Yes	IEA	ETP 2020 SDS	1.7°C	SDA	No	360 058*	2.8	
	Aluminium producers	tCO <sub>2</sub> e/t aluminium	Yes	TPI**	Below 2°C	<2°C	SDA	No	7 929*	1.4	

<sup>1</sup> Data quality score of the target scope emissions only, i.e. Scope 1 or Scope 1 + 2. The PCAF data quality score ranges from 1 (highest score) to 5 (lowest score). Refer to section 2.2.3.2.2 for more information.

<sup>2</sup> Due to limitations in available information for all underlying financed assets we rely on our existing calculation approach of financed emission and KPIs for real estate (as referenced further under Section 2.2.3.2.2) which comes with a high level of uncertainty. The emission factors have been kept identical to those used in the baseline calculation. We invested in the platform and calculation methods and will refine our calculations and update our emission factors in the 2025 disclosures.

\* Comprises Scope 1 and 2

\*\* Comprises Scope 1

\*\*\* Transition Pathway Initiative

The metrics used to monitor our targets are based, to the extent possible, on actual financing (i.e. outstanding loan exposure) in order to reflect the actual climate impact of our portfolio. The only exception to this general rule relates to cement, steel and aluminium producers which, compared to the other sectors, are much smaller portfolios limited to a handful of counterparties. To avoid large fluctuations in our target monitoring, it was decided to base targets on granted loan exposure.

For financial year 2024, there are no changes in targets and corresponding metrics or underlying measurement methodologies related to our loan and lease portfolios. Accordingly, no recalculation of baseline values was triggered by our Recalculation Policy. We monitor the progress on our targets on a yearly basis and received a limited assurance on our disclosed target metrics since 2021. Furthermore, following the UNEP FI guidelines on climate target setting, we will review our targets at least every five years.

Below we summarise our performance against the disclosed targets for the aforementioned sectors and product lines:

- Energy: the GHG emission intensity of our electricity portfolio decreased by 56% since base year 2021. There are three reasons for this large decrease. Firstly, we financed new renewable energy assets. Secondly, existing renewable energy assets became operational as of this year, which means that the attribution of their zero emissions is now included in the calculation. Thirdly, we decreased our exposure to fossil-fuel-based power production, including through the accelerated wind-down of two of our international legacy files.

The financed emission intensity of our overall energy portfolio decreased by 42% compared to our 2021 baseline. This decrease was mainly driven by the above-mentioned reduction in financed emissions within our electricity portfolio. Additionally, most countries are decreasing their exposure to the upstream oil and gas sub-sector. They are also shifting their exposure in this sector to lower-emission activities such as the storage, transmission and distribution of oil, gas and electricity.

This positive evolution in our energy-related climate targets should be considered and evaluated with care. We remain committed to supporting the energy transition plans in our home countries. Subsequently, there may be volatility in our energy target progress over the course of the next few years. Our efforts regarding the 2030 target values will remain unaffected.

Lastly, the share of renewable financing increased significantly to 67.5% of our total energy portfolio. This was driven by both a large increase in renewable energy loans and a (smaller) decrease in non-renewable loans in 2024. We are therefore on track again towards the 2030 target, though some volatility is possible along the way as country transition plans are reviewed as indicated above.

- Real estate: in 2024, the financed emission intensity of the overall real estate portfolio decreased by 15% compared to the 2021 baseline. This is largely explained by the 10% reduction in the emission intensity of the residential portion of the real estate portfolio. The main reason for the decrease in the emission intensity of the residential real estate portfolio is that newly granted mortgage loans had, on average, better EPC (Energy Performance Certificate) labels and lower habitable surface areas per million euros financed. Yet, despite this decrease, the residential real estate target itself is not yet fully in line with the 2024 KBC pathway value of 43 kg of CO<sub>2</sub>e/m<sup>2</sup>. However, we expect that a further decline can only be brought in line with the foreseen pathways if the governments also provide the necessary incentives and measures.
- Vehicle loans/financial lease and operational lease: the emission intensity of our passenger car portfolio is structurally decreasing compared to our base year 2021. The biggest decrease is in our operational lease portfolio, where we recorded a reduction of 42% compared to our base year 2021. We observe different speeds of electric vehicle (EV) adoption across the countries in KBC Group. Nevertheless, the majority of all new vehicles financed by KBC Group are EVs. This is in line with our 2030 targets. In the light commercial vehicle portfolio this decrease is more gradual (-5% compared to base year 2021) and mainly due to slow expansion of the availability of electrified vans.
- Agriculture: the financed emission intensity of the sector dropped significantly. Each year's progress measurement is based on measurements performed using the PCAF Global Standard. For this year's measurement, there are several factors that contributed to the overall portfolio evolution, including implementation effects of the PCAF Global Standard itself (such as an update and inflation adjustment of emission factors), portfolio evolutions, and improvements in emission data quality levels. Notwithstanding these data quality improvements, we emphasise that we remain confronted with overall lower quality levels of our measurements as reflected through our PCAF quality level scoring. Also, actual inflation does not necessarily coincide with inflation assumptions considered at the time we set the targets. Any potential reviews of our targets will be in observance of the experience acquired with the aforementioned measurement observations.
- Cement: the cement sector is one of the hard-to-abate industries, but despite this we note a first decrease in our portfolio emission intensity. This decrease is a combined result of our investments in better data quality (in turn leading to improved accuracy of our calculations) as well as the fact that one of the largest clients in our cement portfolio showed an improved emission intensity compared to last year. This improvement is an embodiment of this company's public commitment to decarbonise its cement-producing activities, which has set out a decarbonisation strategy to support its target implementation. The progress made in 2024 reflects this evolution.
- Steel: our steel portfolio progress assessment showed an increased emission intensity compared to the 2021 baseline. Due to our portfolio being significantly concentrated on one major corporate group, the emission intensity of this entity remains a crucial determinant of the overall portfolio's emission intensity. This corporate group has implemented a net-zero action plan, which includes a steel production technology roadmap and associated capital expenditure impacts. Engagement discussions are ongoing to support them in their overall transition journey. While this commitment is reassuring, it is important to note that the targets we expressed in our 2022 Climate Report were aligned with the climate plans of the companies within the scope of

our target. Therefore, any delays in these climate plans will inevitably impact the progress we make towards our target. Currently, there is a perceived delay in the critical capital expenditure plans of the company towards achieving net-zero steel production. We will continue to engage with our clients to support sustainability-linked investments as they navigate their significant transition challenges.

- Aluminium: our calculated carbon emission intensity of our aluminium portfolio is far lower than that of the global market. In 2024, our already low t CO<sub>2</sub>e emissions per aluminium production decreased even further. While this evolution was entirely due to an improvement in the quality of the underlying client data used, it still solidifies the limited indirect climate impact of this portfolio and the dedication to staying well below the global emission intensity level of the sector.

#### **Asset management activities (2.2.3.1.3)**

For our asset management activities, we also set and monitor climate-related targets. The main objective of climate-related targets in this context is to redirect more (client) money towards responsible investing. In this regard, we note that the investment assets for unit-linked portfolios of clients of KBC Insurance and managed by KBC Asset Management are also included here. This supports our commitment to align our investing activities with the Paris Agreement, as outlined in our Environmental Policy. The environmental targets for our asset management activities are set by KBC Asset Management and they have been reviewed and approved by the ISB and ExCo and endorsed by the Board.

Climate-related targets for asset management activities	Base year	Unit	Base year value	2024	2025 Target	2030 Target	Progress in line with target?
Share of RI funds in total DCM	2021	%	33%	44% <sup>1</sup>	45%	55%	Yes
Share of RI funds in total annual fund production (gross sales)	2021	%	55%	51% <sup>1</sup>	-	65%	Yes
Carbon intensity (Scope 1 + 2) of corporate investees in Responsible funds	2019	tCO <sub>2</sub> e/million USD revenue	196	55 <sup>2</sup>	-	98	Yes
% change	2019	%	-	-72% <sup>2</sup>	-	-50%	Yes

<sup>1</sup> Figure at end of fourth quarter of 2024

<sup>2</sup> Figure at end of third quarter of 2024

The targets related to the share of Responsible Investing funds cover DCM managed by KBC Asset Management and its subsidiaries. In this regard, we note that the RI funds focus on sustainability objectives beyond climate change mitigation. Considering our entire portfolio of RI funds, climate change mitigation is the most widely applied sustainability objective. For some funds, however, it is not the main sustainability-related focus.

Our target for carbon intensity of Responsible funds includes those RI funds for which carbon-related considerations are taken into account (for more details on the diversity of our RI funds, we refer to the Investment Policy for Responsible Investing funds in section 2.2.2.1). Within these RI funds, the target covers the Scope 1 and Scope 2 emissions from corporate investments, i.e. corporate bonds and equity, for which Trucost data is available (see section 2.2.3.2.2 for more information on our methodology). For all RI funds at least 90% of corporate investments are covered by GHG data. The funds-of-funds are not included in the indicator calculation to avoid double-counting. For the part not covered by the indicator, no data is currently available.

It is worth mentioning that the representativeness of our 2019 baseline value is ensured since the calculation was based on benchmarks covering a wide scope of companies. Also, since the scope of the target is limited to investees' Scope 1 and Scope 2 emissions, insights on the progress are not affected by investees' Scope 3 emissions. The calculation of Scope 3 emissions is less standardised across companies, which would lead to more volatility and lower comparability.

The targets regarding the share of RI funds compared to the total DCM and the total gross sales, respectively, are calculated as such with no limitations or significant assumptions. The carbon intensity reduction target is inspired by the target set by the Net Zero Asset Managers Initiative. Hence, it is not based on conclusive scientific evidence.

For financial year 2024, there are no changes in targets and corresponding metrics or underlying measurement methodologies related to our investment portfolios.

In terms of monitoring, the targets related to the share of RI funds are calculated and followed up on a monthly basis. We are currently on track to achieve our targets. With regard to the target for the carbon intensity of corporate investees in the RI funds, we continuously monitor this as one of the ESG targets at portfolio level. The aggregated reduction target for asset

management combines the specific targets of these funds under the assumption of a neutral asset allocation. The actual result is dependent on the asset allocation as well as on the GHG reductions achieved in the individual funds. We want to highlight that currently, the carbon intensity of our RI funds is already below the 2030 target. This is mainly driven by the fast implementation of the updated Investment Policy in 2021, which includes additional exclusion criteria regarding fossil fuels.

#### **Own investments of KBC Insurance (2.2.3.1.4)**

Similar to our asset management activities in the previous paragraph, we have a target for the carbon intensity of the own investments of KBC Insurance (excluding unit-linked investments). The target is set by KBC Insurance and approved by the ISB. This further underpins our climate-related ambitions as outlined in our Environmental Policy.

Climate-related targets for own investments of KBC Insurance	Base year	Unit	Base year value	2024	2025 Target	2030 Target	Progress in line with target?
Carbon intensity (Scope 1 + 2) of listed equity and corporate bonds portfolio of KBC Insurance	2019	tCO <sub>2</sub> e/million USD revenue	112	27 <sup>1</sup>	84	67	Yes
% change	2019	%	-	-75% <sup>1</sup>	-25%	-40%	Yes

<sup>1</sup>Figure at end of third quarter of 2024

The target for the own investments of KBC Insurance pertains to all insurance entities. Similar to the carbon intensity target for our asset management activities, the scope of the target covers the Scope 1 and Scope 2 emissions from corporate investments, i.e. corporate bonds and equity, for which Trucost data is available (see section 2.2.3.2.2 for more information on our methodology).

Here too, the large number of investments as well as the restriction to investees' Scope 1 and Scope 2 emissions ensure that our baseline value remains representative. We further note that the carbon intensity is not based on conclusive scientific evidence. For financial year 2024, there are no changes in targets and corresponding metrics or underlying measurement methodologies related to our investment portfolios.

The GHG intensity reduction of the listed equity and corporate bond portfolio of KBC Insurance remained firmly on track after a further decrease in 2024. As with the carbon intensity targets for our asset management activities, the GHG intensity is already well below the 2030 target. Here too, this is mainly driven by the fast implementation of the updated Investment Policy in 2021.

#### **GHG emissions: gross Scope 1, 2, 3 and total emissions (2.2.3.2)**

We calculate our direct and indirect carbon footprint in accordance with the GHG Protocol Corporate Accounting and Reporting Standard. Based on our Scope 1, 2 and 3 GHG emission calculations (for the definition of Scope 1, 2 and 3 emissions, we refer to section 2.2.3.1), the largest source of emissions results from our lending, investment, and insurance underwriting activities, i.e. portfolio emissions, accounted under Scope 3 Category 15, 'Investments'. For KBC these sources account for more than 99% of reported Scope 1, 2 and 3 emissions. For our non-Category 15 Scope 3 emissions, we only report emission sources over which we have direct operational control and which we can use to create awareness amongst staff (i.e. business travel, commuter travel, paper and water consumption and waste generation), as shown in the table below:

<b>Source of GHG emissions</b>	<b>Scope and boundary of KBC GHG emissions</b>
Upstream Scope 3	
Purchased goods and services (Category 1)	Includes emissions from paper and water consumption from all groupwide operations
Capital goods (Category 2)	Not relevant/material to KBC as a financial services company
Fuel- and energy-related activities (Category 3)	Not relevant/material to KBC as a financial services company
Upstream transportation and distribution (Category 4)	Not relevant/material to KBC as a financial services company
Waste generated in operations (Category 5)	Includes emissions from waste generation and waste processing of all groupwide operations
Business travel (Category 6)	Includes emissions from business travel by not-own fleet (vehicles, public transport and air travel) across all groupwide operations
Employee commuting (Category 7)	Includes emissions from employee commuting travel by not-own fleet (vehicles and public transport) across all groupwide operations
Upstream leased assets (Category 8)	Not relevant/material to KBC as a financial services company
Downstream Scope 3	
Downstream transportation and distribution (Category 9)	Not relevant/material to KBC as a financial services company
Processing of sold products (Category 10)	Not relevant/material to KBC as a financial services company
Use of sold products (Category 11)	Not relevant/material to KBC as a financial services company
End-of-life treatment of sold products (Category 12)	Not relevant/material to KBC as a financial services company
Downstream leased assets (Category 13)	Emissions from KBC's operational lease portfolio (Scope 1) included in Category 15
Franchises (Category 14)	Not relevant/material to KBC as a financial services company
Investments (Category 15)	Emissions from KBC's loan (Scope 1, 2 and 3) and lease (Scope 1) portfolio Emissions from KBC's insurance own investments (Scope 1 and 2) Emissions from KBC's bank sovereign bond portfolio (Scope 1 and 2)
Investments – optional (Category 15)	Emissions from KBC's insurance underwriting portfolio (Scope 1 and 2) Emissions from KBC's asset management activities (Scope 1 and 2)

The table below provides an overview of our Scope 1, 2 and 3 GHG emissions. In 2024, we extended the scope of the entities for our own carbon footprint beyond the financial consolidation scope to also include entities over which KBC has operational control. For Scope 1 and 2 emissions, we provide the distinction between GHG emissions related to KBC Group (financial consolidation scope) and GHG emissions related to other entities over which KBC has operational control. Our own carbon footprint is defined as the GHG emissions related to Scope 1, Scope 2 and a selection of Scope 3 emissions sources over which we have direct operational control (i.e. business travel, commuter travel, paper and water consumption and waste generation).

Scope 3 Category 15 covers our loan portfolio. This category is further broken down into emissions related to White Paper sectors (defined in section 2.2.1.1) and emissions related to other sectors. In addition to the indirect emissions from our lending business, Scope 3 Category 15 also includes indirect emissions stemming from our asset management activities, the sovereign bond portfolio of KBC Bank, the own investments of KBC Insurance (excluding unit-linked investments) and our insurance underwriting activities. However, the corresponding absolute GHG emissions for our investment portfolios are not included in the table since absolute GHG emissions are not available at the reporting date. Instead, we separately provide carbon intensities for these components. The GHG intensity data cover more than 97% of these corporate and sovereign investments.

We do not calculate emissions for our non-financial assets (except for assets included in our own emissions calculations (see section 2.2.3.2.1). For an overview of KBC's assets, we refer to the Consolidated balance sheet included in the Consolidated financial statements of this annual report.

As a general remark, we note that the GHG emissions shown in the table are not available at year-end. The figures shown are as at 30 September, which we consider to be a good proxy for the end-of-year figures.

GHG emissions	Base year	Comparative	Milestones and target years <sup>1</sup>				Annual % target / Base year
			2024	2025	2030	(2050)	
<b>Scope 1 GHG emissions</b>							
Gross Scope 1 GHG emissions (tCO <sub>2</sub> e)	-	-	40 717	-	-	-	-
Of which KBC Group consolidated	-	-	36 059	-	-	-	-
Of which not fully consolidated entities other than joint ventures and associated companies where KBC has operational control	-	-	4 658	-	-	-	-
Percentage of Scope 1 GHG emissions from regulated emission trading schemes (%)	-	-	0%	-	-	-	-
<b>Scope 2 GHG emissions</b>							
Gross location-based Scope 2 GHG emissions (tCO <sub>2</sub> e)	-	-	35 361	-	-	-	-
Of which KBC Group consolidated	-	-	34 870	-	-	-	-
Of which not fully consolidated entities other than joint ventures and associated companies where KBC has operational control	-	-	491	-	-	-	-
Gross market-based Scope 2 GHG emissions (tCO <sub>2</sub> e)	-	-	4 626	-	-	-	-
Of which KBC Group consolidated	-	-	4 467	-	-	-	-
Of which not fully consolidated entities other than joint ventures and associated companies where KBC has operational control	-	-	159	-	-	-	-
<b>Significant Scope 3 GHG emissions</b>							
Total Gross indirect (Scope 3) GHG emissions (tCO <sub>2</sub> e)	-	-	45 825 058	-	-	-	-
1 Purchased goods and services	-	-	1 552	-	-	-	-
2 Capital goods	-	-	-	-	-	-	-
3 Fuel and energy-related activities (not included in Scope 1 or Scope 2)	-	-	-	-	-	-	-
4 Upstream transportation and distribution	-	-	-	-	-	-	-
5 Waste generated in operations	-	-	812	-	-	-	-

11 Use of sold products	-	-	-	-	-	-	-
12 End-of-life treatment of sold products	-	-	-	-	-	-	-
13 Downstream leased assets	Included in 15 Investments (of which White Paper sectors and product lines)						-
14 Franchises	-	-	-	-	-	-	-
15 Investments <sup>2</sup>	-	-	45 801 394	-	-	-	-
Of which White Paper sectors & product lines <sup>3</sup>	-	-	26 822 564	-	-	-	-
Of which remaining sectors <sup>4</sup>	-	-	18 978 830	-	-	-	-
<b>Total GHG emissions</b>							
Total GHG emissions (location-based) (tCO <sub>2</sub> e)	-	-	45 901 136	-	-	-	-
Total GHG emissions (market-based) (tCO <sub>2</sub> e)	-	-	45 870 401	-	-	-	-

<b>Insurance-associated emissions<sup>5</sup></b>	-	-	199 719	-	-	-
<b>Emission intensities from our asset management activities</b>						
Investments in corporates (in tCO <sub>2</sub> e/million USD revenue)	-	-	58	-	-	-
Investments in sovereigns (in tCO <sub>2</sub> e/million USD of GDP) <sup>6</sup>	-	-	532	-	-	-
<b>Emission intensities from the sovereign bond portfolio of KBC Bank</b>						
Investments in sovereigns (in tCO <sub>2</sub> e/million USD of GDP) <sup>6</sup>	-	-	623	-	-	-
<b>Emission intensities from the own investments of KBC Insurance</b>						
Investments in corporates (in tCO <sub>2</sub> e/million USD revenue)	2019	112	27	84	67	-
Investments in sovereigns (in tCO <sub>2</sub> e/million USD of GDP) <sup>6</sup>	-	-	522	-	-	-

<sup>1</sup> Please note that, except for the own investments of KBC Insurance in corporates, the scope of the GHG emissions in this table differs from the scope of our GHG emissions reduction targets. We refer to section 2.2.3.1 for more information on our GHG emissions reduction targets, including a description of the scope for each target. For this reason, the columns related to targets could not be completed.

<sup>2</sup> The figure in column '2024' represents the total of financed Scope 1 (13 737 745 tCO<sub>2</sub>e), Scope 2 (1970 149 tCO<sub>2</sub>e) and Scope 3 (30 093 500 tCO<sub>2</sub>e) emissions. Please note that this figure also includes operational leasing, which is not included in the scope of loan book reporting. Financed emissions associated with vehicle financing are double-counted due to vehicle loans granted in sectors for which separate financed emission calculations are made. Also, for an approximate 5% of the outstanding loan book, no PCAF calculation could be made.

<sup>3</sup> The figure in column '2024' represents the total of financed Scope 1 (11 621 420 tCO<sub>2</sub>e), Scope 2 (707 081 tCO<sub>2</sub>e) and Scope 3 (14 494 063 tCO<sub>2</sub>e) emissions. Calculations are made using the PCAF Global Standard Part A. There are varying underlying data quality levels for our financed emissions which are expressed in a data quality score (more information in Section 2.2.3.2.2 of this report). The following PCAF quality scores apply for our White Paper sectors: Agriculture ('4.9'), Building & Construction ('3.7' for Cement, '5.0' for the remaining part), Energy ('4.7' for Oil & Gas, '4.7' for Transmission & Distribution, '3.8' for Electricity and '5.0' for Energy Traders), Real Estate ('3.0' for mortgages and '3.4' for Commercial Real Estate), Food & Beverages ('5.0'), Metals ('2.6' for Steel, '3.6' for Aluminium and '5.0' for the remaining part), vehicle financing financial lease and loans ('3.4'), vehicle financing operational lease ('1.0'), Automotive ('5.0'), Shipping ('5.0'), Aviation ('5.0') and Chemicals ('5.0').

<sup>4</sup> The figure in column '2024' represents the total of financed Scope 1 (2 116 325 tCO<sub>2</sub>e), Scope 2 (1 263 068 tCO<sub>2</sub>e) and Scope 3 (15 599 437 tCO<sub>2</sub>e) emissions. Calculations are made using the PCAF Global Standard Part A. The overall data quality score is '5.0'. See Section 2.2.3.2.2 of this report for more information.

<sup>5</sup> Calculations are made using the PCAF Global Standard Part C. The figures comprise the Belgian portfolio only. The data quality score for Personal Motor Lines is 2.9 while the data quality score for commercial lines is 5. See Section 2.2.3.2.3 of this report for more information.

<sup>6</sup> Please note that the most recent year of GHG data of countries is modelled by our data provider Trucost (S&P) due to a time lag of one year on sovereign reported data. We calculated the weighted GHG intensity of the sovereign bond portfolio including updated imported emissions received in November 2024.

### Own carbon footprint (2.2.3.2.1)

The calculation of the GHG emissions linked to our operational perimeter follows the GHG Protocol Corporate Accounting and Reporting Standard. We collect primary activity data of emission sources from each core country and account for 100% of the emissions from activities over which we have operational control. The percentage of emissions calculated using primary data is above 98%.

For Scope 1 and 2 GHG emissions, we apply the hybrid calculation method. We use supplier-specific emission factors where available, and standard emission factors from the IEA, Reliable Disclosure and the Association of Issuing Bodies, Department for Energy Security & Net Zero and KBC-specific emission factors as a fall-back option.

For the Scope 3 emissions related to our own operations, we use the average-data method for Categories 1, 5, 6 and 7. These categories are not material in KBC's footprint, but are mainly measured and tracked to raise awareness amongst staff on emissions sources over which we have operational control. Data is gathered for all operations in KBC.

For financial year 2024, there were some small changes in the measurement methodologies related to our GHG inventory:

- We started using net calorific value emission factors for fuel consumption, instead of gross calorific emission factors.
- We started reporting emissions for water supply under Scope 3 Category 1 (before: Scope 3 Category 5). Emissions for water treatment are still reported under Scope 3 Category 5.
- We changed our extrapolation logic for smaller subsidiaries (<100 FTE). Where before, we only used Full-Time Equivalent (FTE) as a parameter to extrapolate emissions, we now use FTE for transport-related emissions and floor area for building-related emissions. The amount of extrapolated emissions account for approximately 1.5% of our total emissions.

Besides the Scope 1, 2 and 3 emissions related to our own carbon footprint, we also use the intensity metric shown in the table below to monitor the impact of our own operations.

Own carbon footprint	Description	Unit	2024
All activities	GHG intensity per FTE	t CO <sub>2</sub> e / FTE	1.76
Financial activities only	GHG intensity per FTE	t CO <sub>2</sub> e / FTE	1.46

These metrics are calculated based on the total of Scope 1, Scope 2 (market-based) and Scope 3 own emissions, respectively for all activities of KBC (as shown in the GHG emissions table above) and for our own footprint target scope (see section 2.2.3.1.1). The metrics have not been validated by an external body other than the assurance provider.

For 2024, the share of contractual instruments used for the sale and purchase of energy is 87.7%. The types of contractual instruments used for the sale and purchase of energy are as follows:

- Energy attribute certificates: 2.2%
- Energy attribute certificates or contracts: 85.6%
- Supplier emission rates: 0.0%

This metric considers all purchased energy reported under Scope 2: electricity, heating, steam, cooling.

#### **Financed emissions (2.2.3.2.2)**

This section describes the calculation methodologies for our Scope 3 Category 15 financed emissions. The approach for our lending-related emissions differs from the approach for emissions linked to our investing activities.

#### **Loan and lease portfolios**

Calculating our financed emissions allows us to track performance against the targets we have set on our lending portfolios (see section 2.2.3.1) and to evaluate the effectiveness of our climate-change mitigation actions. This also helps us meet the reporting requirements from regulators and supervisors. We measure the financed emissions for our loan portfolio if and when calculation methods and/or data are available. As a result, for 4.6% of our loan portfolio no associated financed emissions could be calculated. For a definition and end-of-year figures of our 'loan portfolio', we refer to the 'Glossary of financial ratios and terms' section in this annual report. Our emission calculations are based on loan portfolio figures as at 30 September 2024, which are in line with the end-of-year figures.

For that measurement, we describe below the methodologies, assumptions and emission factors used for:

- Parts of the loan portfolio for which targets have been set (see section 2.2.3.1; further referred to as 'target sectors');
- Parts of the loan portfolio for which no targets have been set (referred to as 'non-target sectors' below).

As part of our Sustainable Finance Programme, we identified the most carbon-intensive sectors and product lines in our lending portfolios. To this end, we performed strategic assessments of sectors with the largest climate impact because of the nature of the activities (carbon-intensive industrial sectors) and took into account the size of our exposure to that sector. For each of the identified sectors, we assessed the environmental impacts, dependencies and associated risks and opportunities. All of these assessments were compiled in our White Papers. This was done for eight industry sectors (energy, commercial real estate, agriculture, food production, building and construction, chemicals, transport and metals), and the three most impactful product lines (mortgages, car loans and car leasing) in our portfolios.

We calculate the financed emissions related to our lending business based on GHG emissions data collected from our counterparties. For clients for which we do not have GHG emissions information, we fall back on the sector asset-based PCAF emission factors (secondary information, following the data quality hierarchy of PCAF). The percentage of emissions calculated using primary data is 2.6%. For all of our calculations, we follow the PCAF guidance as closely as possible. The quality of the financed emission calculation is reflected in a dedicated PCAF data quality score ranging from '1' – highest – to '5' – lowest). The PCAF quality score cards can be consulted in the PCAF Global Standard. Through our Data and Metrics programme we invest and have invested structurally over the years to build data gathering, calculation and reporting capabilities to support the ESG disclosures. Our main data collection and calculation platform for our loan portfolio GHG emissions is/will be also used for financial, risk and treasury reports; as such, the ESG reporting benefits from that infrastructure with embedded data quality management, master data management, reconciliation processes, security, archiving etc. Real estate is the only target sector for which the reporting remains outside the platform now. The programme endeavours to deliver the calculations aligned with PCAF through the platform to be ready for reporting over 2025.

#### Target sectors

Our White Papers include, but are broader than, our target sectors and sub-sectors (as disclosed under 2.2.3.1), for which we have developed detailed GHG emissions calculation methodologies at asset level. These methodologies take into account the data availability, the heterogeneity of the financed sectors and the relevance for our business. In line with the PCAF Global Standard, our financed emission calculations are based on actual financing (i.e. outstanding loan exposure) in order to reflect the actual climate impact of our portfolio. For some of our climate lending target metrics we use more appropriate (portfolio) weighted calculation methods to reflect the associated portfolios' climate impacts. This approach is followed in cases where either the numerator of the emission intensity metric has too high a level of uncertainty or where the metric is related to committed loan exposure and not to actual financing. In such a case, the metric would become ineffective for management purposes. E.g., for our vehicle financing targets we decided to calculate the climate impact of the portfolios by calculating the average CO<sub>2</sub> emission intensity based on the emission intensity of the underlying vehicles financed rather than basing our calculations on financed activity (kilometres driven, i.e. information which for the largest part of our portfolio is unavailable). E.g., for our cement, steel and aluminium producers loan portfolios, the portfolio emission intensity is based on the loan-weighted emission intensity of the underlying companies financed. For these three concentrated sectors, it was decided to calculate the metrics on granted loan exposure to avoid large fluctuations in our target monitoring.

#### *PCAF methodology*

We use the PCAF methodology to calculate the financed emissions metrics for most of our target sectors. Please note that, while our target metrics only include Scope 1 and Scope 2 GHG emissions of the borrowers, we do separately calculate the Scope 1, 2 and 3 GHG emissions of our borrowers following the PCAF standard. At this stage, where client-specific GHG emissions data is not available, we use PCAF emission factors. We apply the most recent emission factors published by PCAF, version of March 2024. Exceptions are the real estate sector which uses the PCAF emission factor database version of March 2021 and the Energy sector which uses the PCAF emission factor database version of March 2022. These exceptions are due to technical reasons. Please note as a general remark that we apply the inflation correction formula recommended by PCAF to all our calculations where PCAF emission factors are used.

The PCAF methodology boils down to the following formula:

$$\text{Financed emission} = \sum_i \text{Attribution factor}_i \times \text{Emissions}_i \rightarrow \text{Attribution factor}_i = \frac{\text{Outstanding amount}_i}{\text{Total equity} + \text{debt}_i}$$

with  $i = \text{borrower or investor}$

For the residential real estate sector, an entity-specific methodology has been developed at portfolio level which uses PCAF variables (e.g., EPC emission factors), however these are not always calculated on the level of each individual financed asset. Approximations were necessary due to the fact that PCAF relies on a loan-by-loan/asset-by-asset approach, for which data was not available for large parts of our portfolio. In this sector, the complexity to gather asset-level data is driven by the very high number of individual counterparties. Hence, where no or insufficient data was available at asset level, we estimate the financed floor area by using expert-based m<sup>2</sup> market values. We then apply the relevant PCAF emission factor to estimate the GHG emissions intensity of the assets. The method used is to be considered as a reasonable proxy for PCAF, emphasising the uncertainty with regards to this statement. KBC will implement the necessary changes to its data infrastructure in the near future to enable full application of the PCAF methodology.

## PACTA

For cement and steel manufacturers, we apply the PACTA methodology. This forward-looking, scenario-based methodology, combines loan book information (in our case the granted exposure) for the sectors in scope with company-specific physical Asset Level Data (ALD) to calculate portfolio technology profiles and emission intensities. Where client-specific emission intensity is available, we prefer this data over the ALD PACTA dataset. We have been reporting using the PACTA methodology since 2019. We consider the PACTA dataset and methodology as a reliable source: the PACTA for Banks Methodology was developed by the 2° Investing Initiative together with 17 pilot banks and several non-governmental organisations (NGOs) and research institutions. The project is supported by the German Ministry for the Environment, Nature Conservation and Nuclear Safety and the EU Life programme.

### *Client data*

For aluminium producers, the limited number of counterparties allows us to use client-specific data on GHG emissions intensity. For clients for which we do not have GHG emissions information, we fall back on the sector asset-based PCAF emission factors. We then apply the above outlined standard PCAF formula to calculate the financed emissions.

### Non-target sectors

For the parts of our loan portfolio that are not covered by GHG emissions reduction targets, we apply a high-level, less detailed calculation methodology. This calculation method combines aggregated sector exposures with country-specific PCAF economic activity-based emission factors for that same aggregated sector (i.e. without further detailing the potential emission factor differences between the underlying subsectors).

### **Methodological limitations and data choices**

The limitations of our calculation methodologies for the GHG emissions intensity metrics, as reported in section 2.2.3.1.2, mostly relate to data quality and availability issues. This is reflected in the PCAF data quality score, which we publish in addition to our target metric measurements. Following the PCAF methodology, we update the emission factors and proxies to align with market evolution. Furthermore, in our endeavour to increase the data quality and granularity of our GHG emissions calculation, we are working closely with our clients to improve the systematic collection of their reported GHG emissions. This will allow us to improve our overall PCAF data quality score, as we would be transitioning from sub-sector specific emission factors to asset/counterparty reported GHG emissions (i.e. PCAF data quality score 1 or 2). Given the breadth of our financing activities, we adopt a variety of methodologies to track and disclose the climate-related impact on, and of, our portfolios. The choice of the selected methodologies is driven by a combination of relevance and applicability for our business, as well as by data availability. If and when applicable where, given this context, we depart from the available market standards or data sources such as PCAF or PACTA, this is explicitly mentioned. We also apply different attribution approaches, especially for the real estate sector, due to differences in local data availability. Lastly, for the part of our portfolio not covered by our GHG emissions reduction targets, we apply PCAF's lowest data quality score for emission factors (score 5), which could lead to an overestimation of our financed emissions. The continuous improvement of our data quality scores may affect the outcomes of the calculations and artificially impact our GHG emissions performance, without being imputable to an improvement of our portfolio performance. We established a Recalculation Policy for our target metrics and direct footprint, which is further detailed in section 2.2.2.1 of this report. Improving our access to data also means that we are subsequently confronted with different sources of reported GHG emissions data. Hence, where data sources show different results for the same asset or counterparty, we engage with either the data provider, the client or both. This assessment helps us make informed decisions on the most suitable data source.

The metrics used for measuring and monitoring the carbon footprint of our loan portfolios are described in section 2.2.3.1.2. The methodology behind these metrics is largely described in the previous paragraphs. The carbon intensity metrics related to our loan portfolio have not been assured by an external party other than the assurance provider.

### **Asset management activities**

This paragraph explains the methodologies used for measuring and monitoring the GHG emissions for our asset management activities. We calculate emissions for the DCM, Group Assets of KBC Insurance and KBC Pension Fund assets. This includes investment assets managed by KBC Asset Management for unit-linked portfolios of clients of KBC Insurance. We refer to section 2.2.3.1.3 for the related carbon intensity metrics used to monitor our progress.

For calculating the GHG emission intensities for our asset management activities, we distinguish between exposures to corporates and exposures to governments.

The carbon intensity metrics cover Scope 1 and 2 emissions of the corporate investees. Investees' Scope 3 emissions are excluded since these emissions are more volatile and less comparable across corporates. All data used for the calculation is obtained from the data provider Trucost, a subsidiary of S&P. Trucost in turn based approximately 12% of data inputs on exact values as disclosed by corporate investees (primary data).

For corporates, we calculate a weighted average GHG intensity based on investment exposure.

For sovereigns, we calculate GHG intensity as the sum of territorial and imported emissions, divided by Gross Domestic Product (GDP) in constant USD (i.e. inflation-adjusted). This provides insight into the GHG emissions of a country relative to its economic output.

The assessment of our government bond portfolio suggests that the GHG intensity of our aggregated portfolio is higher than the EMU benchmark (365 tCO<sub>2</sub>e/million USD of GDP at the end of the third quarter of 2024). This outcome was expected due to high exposure to emerging market sovereigns and to countries with relatively higher GHG-intensity scores, such as Belgium, the Netherlands, Hungary and the Czech Republic.

Our carbon intensity metrics have not been assured by an external party other than the assurance provider. We note that the quality of our calculations depends to a great extent on the data quality of the GHG emissions data provided by Trucost. In this context, we performed checks on both Trucost's input data and methodology.

#### **Sovereign bond portfolio of KBC Bank**

In 2024, we calculated the GHG emission intensity of the own sovereign bond portfolio of KBC Bank for the first time. For the calculation, we used Trucost data and the same methodology as for the investments in sovereigns within our asset management activities. The intensity metric covers the entire sovereign bond portfolio of KBC Bank. Apart from the assurance provider, it has not been assured by an external party.

We note that the GHG intensity of the sovereign bond portfolio is higher than the EMU benchmark. This is driven by large exposures in our core countries and more specifically in Czech Republic and Belgium, which have relatively higher carbon intensities.

#### **Own investments of KBC Insurance**

The calculation of the GHG emission intensities related to the own investments of KBC Insurance (i.e. excluding our unit-linked portfolio, which is captured in the emission calculation of the asset management activities) is entirely analogous to the methodology for our asset management activities as described above. For investments in corporates, we also refer to section 2.2.3.1.4 for more information on the corresponding target. Furthermore, we note that the largest part of the government bond portfolio of KBC Insurance is invested in Belgian and Czech government bonds, in line with its geographical activity profile. The GHG-intensity score for both countries is very high. Consequently, the GHG intensity of our government bond portfolio is higher than the EMU benchmark.

### **Insurance-associated emissions (2.2.3.2.3)**

In 2023, we calculated the emissions of part of our insurance portfolio for the first time. This section describes the methodology, assumptions and emission factors used for this calculation.

KBC calculates the GHG emissions linked to our insurance underwriting portfolio in line with the PCAF Standard Part C. Currently, PCAF offers methodological guidance for measuring GHG emissions in two business segments: personal motor lines and commercial lines. Consequently, our disclosures are limited to these segments, which – in terms of gross written premium – represent a major part of our total non-life insurance portfolio. Additionally, we only report on insurance-related emissions from our largest business unit (Belgium). Belgium represents 16.8% of the group's insured vehicles and 51.1% of the group's GWP in commercial lines.

In our personal motor lines, we include passenger cars, motorcycles, Light Commercial Vehicles (LCVs), and motorhomes. We followed the scope outlined in PCAF Standard Part C for commercial lines. Commercial lines cover all types of insurance contracts purchased by companies.

We cover the Scope 1 and 2 GHG emissions of the clients across all sectors. For both personal motor lines and commercial lines, we rely on standard emission factors. The percentage of emissions calculated using primary data is 30%. Primary data encompasses the segment of the portfolio for which we have achieved data quality levels 1 or 2, as measured in accordance with the PCAF standard.

#### **GHG emission metrics for our insurance underwriting activities in Belgium**

	Description	Unit	2024
Personal motor lines	Insurance-associated emissions of our personal motor lines	t CO <sub>2</sub> e	99 386
Commercial lines	Insurance-associated emissions of our commercial lines	t CO <sub>2</sub> e	100 333

The basic formula we use follows the PCAF Standard:

$$\text{Insurance} - \text{associated emissions} = \text{Attribution factor}_i \times \text{Emissions}_i$$

We use the attribution factor provided by PCAF for Belgium, based on publicly available information and open-source research. Emissions are estimated using data from the Belgium Business Unit on vehicle engine type, WLTP value, and, if available, the number of kilometres driven during the year. Scope 1 emissions cover direct fuel combustion, while Scope 2 emissions cover indirect electricity generation for electric vehicles. When internal data is unavailable, we use third-party estimates.

We base ourselves on the insurance-specific PCAF economic emission factor database to identify the allocated emissions of our insured commercial clients. We used NACE activity codes to determine the emissions of our commercial clients expressed in tonnes of CO<sub>2</sub>e per million euros of turnover. The absolute insurance-associated emissions have not been assured by an external party other than the assurance provider.

The main limitations of our calculation methodologies for insurance-associated GHG emissions are related to the quality of the data we use. As explained above, we rely on third-party proxies or average calculations as a fallback option where no exact vehicle emission or mileage data is available for personal motor lines. For commercial lines, we currently lack GHG emissions data on our clients and hence rely on the economic activity-based emission factors provided by PCAF. Furthermore, we use a weighted average CO<sub>2</sub>e emissions calculation to estimate the emissions related to the part of our portfolio where sector mapping is missing. We are analysing and considering our options to enhance our data gathering processes and improve the collection of GHG emissions and revenue data. We will also closely follow and align with the further development of the PCAF Standard for insurance-associated emissions, especially the inclusion of further lines of business.

#### **GHG intensity (2.2.3.2.4)**

We have set a range of targets in terms of carbon intensity for our lending and investing activities. We measure and monitor our direct and indirect carbon footprint through various GHG intensity metrics. The way our intensity metrics are defined depends on the context in which they are applied:

- The carbon intensity metric we use for our own carbon footprint is expressed in terms of FTE (see section 2.2.3.2.1);
- Our sector-specific lending targets are expressed relative to sector-specific physical output metrics or relative to the financed monetary amount (see section 2.2.3.1.2);
- The carbon intensity targets for our investment portfolios are measured relative to the revenue of the underlying corporates and relative to the GDP of the underlying sovereigns (see section 2.2.3.1.3).

As a financial institution active in banking, insurance and asset management, we believe this is the most effective way to track our carbon impact. Given the structure and complexity of our organisation, we do not define and disclose a single total GHG intensity metric.

#### **GHG removals and GHG mitigation projects financed through carbon credits (2.2.3.3)**

The portion of our own footprint that cannot yet be eliminated is offset using carbon credits. In practice, we calculate our own emissions at the end of the year, then negotiate a contract based on the calculated volumes, and cancel these carbon credits at the beginning of the next year. This means that the amount of carbon credits cancelled in the reporting year is used to offset our own footprint of the year before. The total amount of carbon credits planned to be cancelled in 2025 is therefore not based on existing contractual agreements.

##### **Emission reductions or removals (tonnes of CO<sub>2</sub>e)**

Amount of GHG emission reductions or removals from climate change mitigation projects outside our value chain we have financed in the reporting year 2024	56 000
Share from reduction projects (%)	90%
Share from removal projects (%)	10%
Share of removal projects from biogenic sinks (%)	100%
Share of removal projects from technological sinks (%)	0%
Share from Verra Carbon Standard (%)	100%
Share issued from projects in the EU (%)	0%
Share that qualifies as a corresponding adjustment under Article 6 of the Paris Agreement (%)	-
Total amount of carbon credits outside value chain that are verified against recognised quality standards and cancelled in the reporting year 2024	56 000
Amount of carbon credits planned to be cancelled in 2025	54 000

Since 2021, we have aimed to achieve net climate neutrality with respect to our own operations. We took three steps to achieve this goal: measure, reduce and offset. As described in 'Own carbon footprint targets (2.2.3.1.1)', KBC has set targets to reduce the CO<sub>2</sub>e emissions from its own operations. Avoided emissions are therefore not taken into account as carbon offsets do not contribute to achieving this target. Each year the emissions from our own operations (i.e. remaining after actions to reduce emissions) are offset, hence achieving net carbon neutrality. To this end, we have selected high quality projects certified under internationally recognised standards. Moreover, we specifically chose to invest in projects that address climate change, whilst simultaneously ensuring additional benefits for local communities and biodiversity conservation. Our due diligence process is aimed at selecting projects with a demonstrated real-world impact. However, ultimately this process relies on information supplied by third parties and is dependent on the availability of credits within those projects. The above offsetting is not validated by an external body other than our assurance provider.

#### **Internal carbon pricing (ICP) (2.2.3.4)**

In 2021 we established a first ICP framework which is built around the four-dimensional framework of the 2017 'How-to Guide to Corporate ICP' report of CDP/Ecofys. CDP is a credible methodological standard setter in environmental reporting, known for its collaborations with reputable organisations, alignment with global standards, and commitment to data quality and transparency. We put in place our first ICP levels in 2021, and our Sustainability and Economic departments review the prices annually. We chose to identify evolutionary ICP trajectories which since our 2022 review extend up until 2050 for two major EU-relevant transition pathways, i.e. a well-below 2° (WB2D) and a net zero 2050 (NZ2050) pathway based on NGFS (Network for Greening the Financial System) climate scenarios. The NGFS carbon price data is averaged over the different models, interpolated, adjusted to 2020 price levels and converted to euro, resulting in one uniform metric that can be used in internal management processes. As a result of our 2024 application of this calculation method, our latest internal carbon price stands at 35 EUR/t CO<sub>2</sub> and 99 EUR/t CO<sub>2</sub> under WB2D and NZ2050 pathways, respectively. To reflect the associated transition under each pathway, we establish price increase assumptions of 77% and 201% by 2030 for the WB2D and NZ2050 internal carbon price levels, respectively. These price increases mirror those averaged over the different NGFS climate scenario models.

Our internal carbon price is currently used as a shadow price to inform credit decision-making for companies operating in carbon-intensive industries. As a result, our internal carbon price is currently only applied to our Scope 3 Category 15 emissions. Overall, this leads to an estimated 0.5% of our financed Scope 1 and 2 emissions potentially being subject to ICP considerations; none of our Scope 1 and 2 emissions are subject to such pricing considerations. Going forward, as data availability is expected to increase (due to initiatives such as the CSRD), we plan to increase the scope of application. The measurement of the carbon prices is not validated by an external body other than the assurance provider of the Sustainability Statement.

## **Water and marine resources (2.3)**

### **Water and marine resources: Impact, risk and opportunity management (2.3.1)**

#### **Policies related to water and marine resources (2.3.1.1)**

##### **Sustainability Policy Framework**

As explained in section 2.2.2.1 on climate-related policies, our Group Sustainability Policy Framework contains different policies which are indirectly related to water, such as the Biodiversity Policy, Mining Policy and Energy policy.

##### **Biodiversity Policy**

This policy (further explained in section 2.4.2.1) contains water-related elements, such as the restriction that KBC does not finance, insure or provide advisory services to fishing practices that irreversibly damage aquatic habitats and ecosystems, shark finning or commercial whaling. Moreover, KBC encourages its clients to subscribe to and implement voluntary standards such as the Marine Stewardship Council and the Aquaculture Stewardship Council.

##### **Mining Policy**

While the mining industry provides essential resources to most sectors of the economy, at the same time mining activities can have a negative impact on the environment and on society in terms of water use and water quality, community relations, health and safety, land use, ecosystems, waste and bribery and corruption. This policy therefore aims to limit these negative effects as much as possible, while preserving the benefits of the mining industry to the economy in general. Under this policy, the provision of financing, insurance or advisory services related to mining activities is subject to strict conditions, such as compliance with a set of external standards (e.g., the Extractive Industry Transparency Initiative).

This policy has a worldwide scope and applies to all financing, insurance and advisory services related to companies involved in mining activities. Monitoring of compliance with this policy follows the same process as described in section 2.2.2.1 on climate-related policies.

## **Other**

KBC has sites located in areas of high-water stress (for instance, the World Resources Institute considers a large part of Flanders as an area of extremely high-water stress). Therefore, we use potable water efficiently and monitor its use carefully. This happens on a continuous basis and on top of various initiatives taken by the government related to both the supply and demand side in cases of water stress. We do not have a specific policy regarding water supply as we have efforts in place related to our water use. Moreover, this is also supported by the outcome of our materiality assessment, where own water use did not emerge as a material matter for KBC.

### **Actions and resources related to water and marine resources (2.3.1.2)**

#### **Managing water-related risks**

For more information on how water-related risk is embedded in our Risk Management Framework, we refer to section 2.2.2.2, which – besides climate-related actions – also sets out more general actions.

More specifically, we assess water-related risk explicitly in the ERIM, it is included in the sectoral Environmental & Social Heatmap (used in loan origination and for monitoring purposes) and in the scope of the NAPP standard (see section 2.2.2.2).

We are taking a step-by-step approach where follow-up actions are defined based on the insights gained from our previous actions/analyses. Our approach advances in sync with improvements in the availability and quality of data and methodologies.

#### **White Papers**

In 2023 we extended the scope of our White Papers. As a result, in addition to the initial focus on climate change they include other environmental objectives such as water for sectors where water is a material topic. So far, we have included water in White Papers on agriculture and food and beverages. For 2025, we plan to dedicate a thematic White Paper to water. Our aim with these White Papers is to increase our understanding of water-related impacts, risks and opportunities and, where possible, formulate actions to reduce the negative impact and increase the positive impact of our lending (and, where relevant, insurance) activities on water consumption, withdrawals and discharges. For more information on the White Papers, we refer to section 2.2.2.2.

## **Water and marine resources: metrics and targets (2.3.2)**

### **Targets related to water and marine resources (2.3.2.1)**

At this point in time, we do not have water and marine resources-related targets in place nor have we defined any ambition level indicators to evaluate progress. However, we do track the effectiveness of our policies and actions via a strict due diligence process to monitor compliance of our lending, insurance and advisory service operations with our sustainability framework. For this, we also use third-party ESG analysts' data on the sustainability of companies, including controversies in which they could be involved. Our due diligence process includes the possibility of requesting advice on sustainability-related matters, including water-related topics, for individual cases from sustainability experts. Reputational risk aspects are also taken into account within the scope of this advice. For certain policy domains, this advice is obligatory prior to any business transaction. In other cases, it can be requested in case of doubt. We monitor the number of requests for this expert advice and disclose them in our yearly Sustainability Report.

When deemed feasible and appropriate, our White Papers propose follow-up actions related to the topics analysed. The topics to be addressed in White Paper analyses are presented for approval to the ISB.

## Biodiversity and ecosystems (2.4)

### Biodiversity and ecosystems strategy (2.4.1)

#### Transition plan and consideration of biodiversity and ecosystems in strategy and business model (2.4.1.1)

We acknowledge that our impacts and dependencies on biodiversity and ecosystems can influence our strategy and business model, and can thus result in risks and opportunities.

We analyse the risks stemming from biodiversity loss and ecosystem damage via our ERIM, through which the materiality of several environmental risks is assessed. Consequently,

- we assess risks for KBC, but separate maps are also constructed for the banking, insurance and asset management activities. Further breakdowns are made for our core countries;
- we structurally assess the risks stemming from biodiversity loss and ecosystem damage for the short term (0-3 years), the medium term (3-10 years) and the long term (beyond 10 years);
- experts estimated risk impacts separately for all traditional risk types, taking into account the full value chain.

The assessment considers both transition and physical risks that could potentially stem from biodiversity loss and ecosystem damage. To identify and assess dependencies on biodiversity and ecosystems for our own operations and in our value chain, we focused on the physical risk assessment, whereas transition risks were considered to identify and assess impacts on biodiversity and ecosystems. Within these exercises, we also consider potential future macroeconomic evolutions and systemic risks related to biodiversity loss and underpin the conclusions by internal exercises such as the ENCORE analysis and other internal exercises (see section 2.4.2.2).

The outcome shows that potential risks might predominantly materialise through our downstream activities (lending, insuring, investing), in particular in case of macroeconomic impacts and related systemic risks. These feed into our main risk management processes, such as Risk Appetite and ICAAP/ILAAP/ORSA, presented to the ExCo, RCC and Board on regular basis.

### Biodiversity and ecosystems: Impact, risk and opportunity management (2.4.2)

#### Policies related to biodiversity and ecosystems (2.4.2.1)

We have policies in place to manage our material impacts and risks related to biodiversity and ecosystems. All policies aim to focus on actions to mitigate nature and biodiversity loss.

Our Sustainability Policy Framework contains different policies (see section 2.2.2.1), some of which are directly and indirectly related to biodiversity, such as the Biodiversity Policy, the Mining Policy and the Exclusion Policy for Responsible Investing funds. It also includes requirements for clients in scope regarding sustainable land, sustainable agriculture practices and sustainable oceans, and also contains policies to address deforestation.

As biodiversity opportunities are not material for KBC (following the results of our materiality assessment), they are not covered in this document.

## Biodiversity Policy

This policy includes requirements for:

- producers and traders of forest commodities;
- activities in or near protected areas;
- activities involving endangered or invasive species;
- cattle farming and fisheries.

## Biodiversity Policy

Climate change	Not directly addressed, however addressed indirectly through requirements for producers and traders of forest commodities
Land-use change; freshwater-use change, sea-use change	<ol style="list-style-type: none"> <li>1) KBC does not finance, insure or provide advisory services in relation to activities located in or significantly impacting certain protected areas.</li> <li>2) Secondly, as the production of forest commodities such as palm oil and soy often involves deforestation, KBC has several requirements for producers and traders of forest commodities, as well as for cattle farming.</li> <li>3) KBC refrains from financing, insuring or providing advisory services relating to the exploration and development of unconventional oil and gas (including Arctic and Antarctic on- and offshore oil and gas deep-water drilling, tar sands, shale oil and gas, coalbed methane) and the exploration of any other new oil or gas fields.</li> </ol>
Direct exploitations	KBC has several restrictions for the forestry and fisheries sector
Invasive alien species	KBC does not provide services to activities involving trade in invasive alien species
Pollution	Not directly addressed, however activities that significantly impact protected areas (including through pollution) are excluded
Other	KBC will not finance, insure or provide advisory services to a number of animal-related activities such as trade in endangered species and activities where animal welfare is compromised
Relation to material impacts	The policy covers impacts in the value chain, which our double materiality assessment considered material with respect to biodiversity
Relation to material physical and transition risks	The policy defines our risk playing field and is translated into underlying risk standards such as the Credit Risk Standards for Responsible and Sustainable Lending and the Investment Policy
Supports traceability of products, components and raw materials with material actual or potential impacts on biodiversity and ecosystems along the value chain	The Biodiversity Policy supports this traceability through its requirements for the production and trade of forest commodities. The producers and traders in scope must commit to have their plantation and/or supply chain fully certified under an internationally recognised certification scheme. These certification schemes often include specific measures on traceability of these commodities
Addresses production, sourcing or consumption from ecosystems that are managed to maintain or enhance conditions for biodiversity, as demonstrated by regular monitoring and reporting of biodiversity status and gains or losses	The described policy addresses this in the sense that production of forest commodities is covered, as well as activities in protected areas
Social consequences addressed	Considering the production and trade of forest commodities, KBC requires clients in scope to be certified under an internationally recognised certification scheme. Apart from sustainable production from an environmental perspective, these certificates can also include social safeguards

## Mining Policy

Our Mining Policy (see 2.3.1.1) has restrictions regarding mining activities in order to mitigate the associated environmental risks such as greenhouse gas emissions, land-use change and water and air pollution. This policy directly addresses the human rights impacts of mining activities as well as the social consequences of the impacts of mining on the environment. It defines our risk playing field and is translated into underlying risk standards such as the Credit Risk Standards for Responsible and Sustainable Lending and the Investment Policy.

## **Exclusion Policy for Responsible Investing funds**

In this Asset Management Policy, biodiversity is addressed in the following way:

### **Exclusion Policy for Responsible Investing funds**

Climate change	The exclusion Policy for RI funds includes restrictions for issuers involved in non-sustainable energy solutions, such as thermal coal, oil and gas
Land-use change; freshwater-use change, sea-use change	All companies with a high or severe controversy score related to Land Use and Biodiversity, for subindustries in which the topic is considered a high or severe risk as well as companies with a severe controversy score related to Land Use and Biodiversity for all other subindustries (e.g., sustainable land, sustainable agriculture, sustainable oceans and deforestation ) are excluded. In addition, all companies with a severe controversy score related to Land Use and Biodiversity in their supply chain are excluded. In addition, all companies with activities that have a negative impact on biodiversity and do not take sufficient measures to reduce their impact are excluded. This would concern the following: <ul style="list-style-type: none"> <li>• All companies operating in Fishing that are not members of the Aquaculture Stewardship Council or the Marine Stewardship Council;</li> <li>• All companies operating in Palm Oil Farming that are not members of the Roundtable on Sustainable Palm Oil;</li> <li>• All companies operating in Soybean Farming that are not members of the Roundtable on Responsible Soy;</li> <li>• All companies operating in Beef Cattle Ranching Farming that do not pass a stringent ad hoc process conducted by the Responsible Investing Team;</li> <li>• All companies operating in Cocoa Farming that are not certified by the Rainforest Alliance;</li> <li>• All companies operating in Sugarcane Farming that are not members of the Bonsucro.</li> </ul>
Direct exploitations	We refer to the restrictions for fishing as well as controversy screening on land use and biodiversity
Invasive alien species	Not addressed in this policy
Pollution	Not addressed in this policy
Other	Animal welfare: all companies that derive at least 5% of their revenue from the production or 10% of their revenue from the sale of fur or special leather are excluded
Relation to material impacts	The Exclusion Policy for Responsible Investing funds covers the exclusion of financing of activities which are considered to have a negative impact on biodiversity
Relation to material physical and transition risks	Given that the Exclusion Policy is applicable to all Responsible Investing funds, the physical and transition risks stemming from biodiversity loss and ecosystem damage are considered in all RI funds
Supports traceability of products, components and raw materials with material actual or potential impacts on biodiversity and ecosystems along the value chain	As the different certifications in scope of the Exclusion Policy for biodiversity include very specific requirements with regard to the value chains, the traceability of products, components and raw materials is implicitly covered
Addresses production, sourcing or consumption from ecosystems that are managed to maintain or enhance conditions for biodiversity, as demonstrated by regular monitoring and reporting of biodiversity status and gains or losses	This is addressed indirectly through controversy screening and the requirement for producers of certain commodities to be a member of certification bodies
Social consequences addressed	Companies involved in activities with a negative impact on biodiversity need to be certified under an internationally recognised certification scheme in order to be allowed in the Responsible Investing funds. These certificates can also include social safeguards

## Actions and resources related to biodiversity and ecosystems (2.4.2.2)

### Managing biodiversity risks

For an overview of the continuous efforts that we make to integrate biodiversity risks into our Risk Management Framework and processes, we refer to section 2.2.2.2. We are taking a step-by-step approach in which we define follow-up actions based on the insights gained from our previous actions/analyses. Our approach advances in sync with improvements in the availability and quality of data and methodologies.

Specifically with respect to biodiversity risks we define the following actions:

- KBC assessed biodiversity transition and physical risks in the ERIM and included these in the sectoral Environmental & Social Heatmap (used in loan origination and for monitoring purposes);
- We dedicated a White Paper to risks and opportunities related to biodiversity loss (in particular: deforestation);
- A high-level assessment of biodiversity impact and dependencies in our loan portfolio has been executed (see section 1.3.3.1);
- Within our internal stress testing, some biodiversity-related stresses were integrated, e.g., assessing the impact of increased insurance risk (Risk Life portfolio) in case of a spread of infectious diseases;
- Biodiversity risks are in scope of the NAPP standard (see section 2.2.2.2).

### White Papers

We extended the scope of our White Papers from the initial focus on climate change to include other environmental objectives such as biodiversity. We initially included biodiversity-related topics for agriculture, food and beverages and construction. In 2024 we dedicated a White Paper entirely to deforestation where we assessed the deforestation-related risks and opportunities in KBC's lending activities.

### Additional biodiversity screening in the Exclusion Policy for Responsible Investing funds

As part of the Exclusion Policy for Responsible Investing funds, we added additional screening concerning fishing, palm oil and soybean farming, beef cattle ranching and cocoa and sugarcane farming. The scope is limited to farming and does not contain other value chain processing. We exclude companies involved in these activities not complying with best practices on biodiversity.

### Other

We did not use biodiversity offsets in our action plans, nor did we incorporate local and indigenous knowledge and nature-based solutions into biodiversity and ecosystems-related actions.

## Biodiversity and ecosystems: metrics and targets (2.4.3)

### Targets related to biodiversity and ecosystems (2.4.3.1)

We do not have biodiversity-related targets in place, nor have we defined a level of ambition or qualitative or quantitative indicators to evaluate progress. However, we do track the effectiveness of our policies and actions via a strict due diligence process. This is the same process as the one described in section 2.3.2.1 on targets related to water and marine resources.

## Social information

General

Environment

Social

Governance

### Own workforce (3.1)

#### Own workforce: impact, risk and opportunity management (3.1.1)

##### Policies related to own workforce (3.1.1.1)

We have the following policies in place to manage our material impacts on our own workforce. These also mitigate risks (including non-financial risks) such as operational risk, litigation and reputational risks. The policies are published on [www.kbc.com](http://www.kbc.com).

##### **Code of Conduct for employees**

The Code of Conduct gives guidance regarding key behaviour we expect from all employees within KBC. It refers to the KBC PEARL+ values and to a strong corporate culture that encourages responsible behaviour to build trust and strike a long-term, sustainable balance between the interests of all our stakeholders: our clients, our employees, our shareholders and society as a whole. We refer to the 'Our business model' section (which is not subject to external assurance) for more details. We also foster and promote an entrepreneurial mindset, lifelong learning, diversity, equal treatment and respect. We expect compliance with the rules and regulations that govern our activities.

As regards our own workforce, the following topics are included:

- Respect, diversity and equal treatment;
- Duty of discretion regarding clients and employee personal data;
- Whistleblowing;
- Compliance with rules and regulations;
- Speak-up culture.

Regular training and awareness sessions are organised by the Compliance department.

#### **Code of Conduct for employees**

Scope	Applicable to all employees of KBC Group and its subsidiaries.
Most senior level accountable	The Board ensures that we have processes in place for monitoring our compliance with laws and other regulations, as well as for the application of related internal guidelines. In this respect, the Board approves the Code of Conduct. Top management of the business units is responsible for ensuring that activities are conducted in line with the Code of Conduct.
Reference to third-party agreements	This policy among other things contributes to our commitment to observe the UN Global Compact Principles and to the OECD Guidelines for Multinational Enterprises on responsible business conduct.
Consideration key stakeholders	Core considerations: <ul style="list-style-type: none"> <li>• Striking a long-term, sustainable balance between the interests of all our stakeholders (clients, employees, shareholders and society as a whole);</li> <li>• Gaining and retaining the trust of those stakeholders;</li> <li>• Acting in the interest of the client to mitigate the risk that KBC's culture, organisation, behaviour and actions would result in poor outcomes and would be detrimental to clients.</li> </ul> The Code (and every change) is shared and discussed upfront with social partners/trade unions.
Disclosure	Published externally on <a href="http://www.kbc.com">www.kbc.com</a> . Available internally for all employees. There is mandatory training for all employees, who are required to underwrite the Code.

#### **Whistleblower Protection Policy and Procedure**

This policy outlines the general principles and procedures for reporting concerns related to immoral, unethical or illegal activities within our organisation. Our goal is to ensure that all employees and other stakeholders are and feel protected when raising concerns. By fostering an environment where whistleblowing is encouraged and safeguarded, we aim to uphold our core values and promote a culture of responsible behaviour throughout KBC.

While the scope primarily pertains to employees and other persons linked to a work-related context, it is extended to everyone (e.g., also consumers – see below) in case of a breach in the area of financial services, products and markets, prevention of money laundering and terrorist financing.

As a minimum, reporting concerns breaches in the ten areas of Union law enumerated in the EU directive 2019/1937 (on the protection of persons who report breaches of Union law and in the areas added by local legislation). Reporting of immoral or unethical conduct, or conduct that compromises the credibility and reputation of KBC group (including all subsidiaries) in general, is also in scope.

We provide various channels for reporting. The identity of any person who reports in good faith will remain strictly confidential and the person is protected against any form of retaliation or negative impact. The person that is the subject of the report is entitled to receive information about the reported breaches and to communicate their own position and exercise their right of defence. An independent unit investigates all cases. The Compliance department is the central point of contact and reports the outcome of investigations to the ExCo, and the general status of implementation to the RCC.

The Compliance department organises regular training and awareness sessions for our employees.

#### **Whistleblower Protection Policy**

Most senior level accountable	This policy is approved by the ExCo. Top management is responsible for implementation in every entity.
Consideration key stakeholders	The interest of stakeholders is considered while drafting the policy, e.g., protection measures and facilitation of reporting through a broad range of channels. We consult with social partners/trade unions.
Disclosure	Published externally on <a href="http://www.kbc.com">www.kbc.com</a> . Available internally for all employees. Recurrent awareness campaigns and training for all staff.

#### **Remuneration Policy for the Board and the ExCo**

The purpose of this policy is to create a remuneration framework (for members of the Board and ExCo of KBC Group NV, KBC Bank NV and KBC Insurance NV) that not only complies with prevailing European and national legislation and regulations, but is also in line with, and contributes to, the business strategy (including the sustainability strategy). It aims to ensure consistency with sound and effective risk management in line with the Risk Appetite Statement, as approved by the Board, to prevent excessive risk-taking and to be aligned with the long-term interests of KBC.

The policy stipulates that remuneration schemes (including the conditions for awarding and paying remuneration) are gender-neutral in order to guarantee equal pay for equal work of equal value.

The base remuneration of Board members is set at a level that reflects the qualifications and efforts required in view of KBC's complexity, the extent of their responsibilities and the number of Board meetings. The Chairman of the Board is entitled to an additional base remuneration. The remuneration of the members of the ExCo of KBC Group is set at a level that is consistent with their decision-making powers, tasks, expertise and responsibilities. It reflects their contribution to the management and growth of KBC and it ensures KBC's continued ability to attract and retain the best qualified individuals as members of the ExCo. To emphasise the fact that the ExCo acts as a committee which bears collective responsibility, the remuneration for all the members, apart from the president, is largely identical (except for a small difference in how the CRO's variable remuneration is calculated, as required by regulation). Detailed information on the renumeration of the Board and ExCo is provided in the Corporate Governance Statement.

#### **Remuneration Policy for the Board and the ExCo**

Most senior level accountable	The General Meeting of Shareholders approves the Remuneration Policy (as legally required). The Board (and the RC) is accountable for the implementation of the policy.
Reference to third-party agreements	The policy is implemented with respect for the applicable legislation and regulation, the Corporate Governance Code (on a comply or explain basis) and the possible remarks of the supervisor.

#### **Remuneration Policy**

The remuneration for all our staff takes into account market practices, competitiveness, risks, long-term objectives of the company and its stakeholders and continuously changing regulations.

The Remuneration Policy outlines the guidelines and procedures for remuneration within KBC, focusing on sustainability, risk management, and alignment with long-term interests:

- Policy purpose and scope: the policy aims to create a sound remuneration framework aligned with KBC's sustainability strategy and European and national legislations, covering all staff except non-executive members of the Supervisory Board and Members of the Executive Committee.
- General remuneration guidelines: the guidelines require all remuneration schemes to comply with the Remuneration Policy, be aligned with local practices and legislation, and be compatible with stakeholders' interests and the Corporate Sustainability strategy. The remuneration schemes are gender-neutral in order to guarantee equal pay for workers of all genders for equal work of equal value.
- Performance measurement: performance is measured based on a performance and appraisal process, which includes setting objectives, continuous feedback, self-evaluation, third-party feedback, and a calibration mechanism for relative performance measurement.

- Global remuneration structure: remuneration schemes consist of fixed and variable components, based on competences, job weightings, skills, contribution, and performance, with maximum ratios between fixed and variable remuneration set for different salary levels.
- Specific guidelines for Key Identified Staff (KIS): Key Identified Staff are those who could have a material impact on the company's risk profile, with specific requirements for non-cash instruments, deferral, and performance-based remuneration to promote sound risk behaviour.

#### **Remuneration Policy**

Most senior level accountable	Board
Reference to third-party agreements	Reporting on remuneration details is aligned with reporting required by local supervisors and the European Banking Authority.
Consideration key stakeholders	The policy complies with all legislation and regulatory requirements.
Disclosure	The General Remuneration Principles which summarise the basic principles of the Remuneration Policy are included in the annual 'KBC Group Compensation Report' which is published on <a href="http://www.kbc.com">www.kbc.com</a> .

#### **Diversity and Inclusion Policy**

This policy aims at the elimination of discrimination (including harassment) and promoting equal opportunities. The policy prohibits all discrimination and unequal treatment, regardless of whether it is directly or indirectly based on race, ethnicity, gender, nationality, marital status, sexual orientation, age, family status, education, disability or religion.

A zero tolerance is applied in case of flagrant disrespectful behaviour towards a colleague such as insults, undermining the integrity or dignity, bullying, harassing or discriminating colleagues. We also refer to the Code of Conduct for employees above.

In case of suspicion about actual or potential wrongdoing, every employee is encouraged to report this, which will lead to an independent, confidential and impartial investigation. We strive with this policy to create a corporate culture where an open mindset prevails and where respect and responsible behaviour are key values. A general commitment is requested from all managers throughout KBC on the following principles: respect as a basis and equal opportunities for all employees.

We report yearly on the evolution of diversity and inclusion to the ExCo and the Board.

#### **Diversity and Inclusion Policy**

Scope	The policy is applicable to both management and employees. All types of diversity are part of the policy but there is a specific focus on gender diversity and disability inclusion.
Most senior level accountable	The ExCo is accountable. We apply a top-down approach: - Every manager is requested to commit to the diversity and inclusion principles/values - Every employee must act in a responsible and respectful manner The diversity and inclusion agenda is part of the Corporate Culture Unit at Corporate HR. This function supports the ExCo on policy matters related to diversity, consolidates the reporting and promotes awareness throughout the organisation. Each core country has a similar local function, embedded in the local HR department.
Consideration key stakeholders	The interests of all employees and the Board are considered via consultation of: - the ERG (Employee Resource Group) 'Diversity Rocks' (see 3.1.1.2); - trade unions; - the HR function; - advisory group of employees with a physical disability.
Disclosure	Published externally on <a href="http://www.kbc.com">www.kbc.com</a> . Available internally for all employees.

### **Policy on Human Rights**

We commit to meeting our responsibility to respect human rights towards all stakeholders, among which the own workforce. By acting responsibly, our employees contribute to minimising negative human rights impacts/risks.

We comply with the core conventions and labour standards set by the International Labour Organisation, the UN Guiding Principles on Business and Human Rights, and the UN Global Compact Principles. We are aligned with the OECD Guidelines for Multinational Enterprises which set the standard for responsible business conduct and respect for human rights within our operations. The relevant legal requirements as set out in the labour codes go beyond these conventions and standards.

Our Human Rights Policy refers to other policies such as the 'Code of Conduct for Employees' and the 'Whistleblower Protection Policy' (see above). The latter was brought in line with the European legislation (i.e. EU Directive 2019/1937 on the protection of persons who report breaches of Union Law).

Several channels are in place to address human rights impacts, including the Workers' Council, a prevention advisory council or equivalent per country, HR mediators or equivalent per country, and a whistleblower reporting tool. We refer to section 3.1.1.3 for more details.

### **Policy on Human Rights**

Scope	All core stakeholders, being clients, suppliers and own employees of the group, through specific policies and human rights due diligence processes.
Most senior level accountable	The ExCo has the highest level of direct responsibility for sustainability, including human rights.
Reference to third-party agreements	UN Guiding Principles on Business and Human Rights OECD Guidelines for Multinational Enterprises The principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work UK Modern Slavery Act UN Universal Declaration of Human Rights UN Global Compact Principles

Our policies relating to our own workforce do not explicitly address trafficking in human beings, forced labour, compulsory labour and child labour as these are prohibited by law. We have a workplace accident prevention policy in place in all our core countries.

### **Processes for engaging with own workers and workers' representatives about impacts (3.1.1.2)**

The perspectives and views of the own workforce inform our decisions and activities through considering the actual and potential impacts on the own workforce. We engage with our employees by conducting employee engagement surveys every six months, via regular social dialogue with our employees and through formal employee representation groups on issues regarding reward, employment conditions, reorganisations and well-being (in accordance with local practices and laws of each country we are operating in).

The CEO and HR managers have the operational responsibility to ensure that this engagement survey happens, and that the results of the employee engagement are taken into account in defining the company's organisation.

The effectiveness of the engagement survey is monitored based on the level of the response rate and satisfaction rate.

We have Employee Resource Groups (ERGs) such as Diversity Rocks where the focus lies on diversity and inclusion. It brings together a diverse range of employees working on issues related to age, disabilities and nationality. Other ERGs exist like Proud@CSOB and Proud@KBC which are LGBTQIA+ ERGs.

### **Processes to remediate negative impacts and channels for own workers to raise concerns (3.1.1.3)**

As a general approach, we put in place several preventive measures to avoid negative impacts on our own workforce:

- Top management is primarily responsible for creating the right environment, nurturing the right behaviour in the organisation and actively shaping the collective attitudes in the group;
- At the same time, all employees are accountable for behaving responsibly in all circumstances and along the lines of KBC values. Several policies, guidelines and actions are put in place to support this approach:
  - Code of Conduct for employees and the responsible behaviour compass, including awareness sessions and mandatory trainings;
  - Promotion of a 'speak-up' culture;
  - Diversity and Inclusion Policy containing the prohibition of discrimination and a zero tolerance on flagrant disrespectful behaviour towards colleagues.

We have a whistleblower process (see 3.1.1.1) in place that allows employees to report immoral, unethical or disrespectful behaviour. Every submission will lead to an independent, confidential and impartial investigation. Reporting is done via:

- a dedicated reporting tool which is made available on intranet;
- the KBC website;
- a dedicated mailbox;
- face-to-face contact with the local compliance function.

Employees also have the possibility to report negative impacts directly to their supervisor, to the General Manager of the HR department, to the employee representatives, the Workers' Council, the prevention counsellor and the HR mediator or equivalent per country. We guarantee confidentiality related to the identity of the employee and protection against retaliation. For more information on the whistleblower process, we refer to section 3.2.1.1.

### **Taking action on material impacts and approaches to mitigating risks related to own workforce (3.1.1.4)**

Based on our principle of local embeddedness, every business or country can decide to define specific initiatives in line with the context they are operating in. As a consequence, we have not defined groupwide key actions related to own workforce.

Some examples of local initiatives:

- In Hungary, an initiative started in 2024 to revise the well-being approach by creating focus groups in some pilot businesses, inviting them to generate ideas on the subject. The focus was on learning about physical and mental health as well as on community building. In 2025 the approach derived will be rolled out to the whole company.
- In Belgium we launched a so-called Team Blue Challenge in September 2024 with a first part inviting colleagues to support non-profit organisations through volunteering. The second part, planned for 2025, will concentrate on encouraging employees to take first aid courses and donate blood and plasma. In this way, we also increase workplace safety.
- In the Czech Republic there is an academy for parents that provides support in the form of six workshops for colleagues planning to return to work after parental leave. An academy for fathers was created in 2024, offering workshops on flexibility, communication, vision and innovation.
- In Bulgaria in 2024 a first issue of a publication called 'Healthy! Compass for a Better Life' was released, providing up-to-date information on the opportunities available to employees to maintain their health and spirit.

None of these local initiatives qualify as key actions sufficiently material from KBC's perspective to be included in this statement.

The management of social risks (linked to our own workforce) is in scope of our Risk Management Framework (see section 2.2.2.2). Within our Risk Appetite, a specific objective is dedicated to attracting, developing and retaining high-quality and committed staff. KBC, as a European financial institution, is strictly regulated and complies with regulatory requirements in the context of e.g., discrimination, working conditions and data protection (EU General Data Protection Regulation, GDPR) for its own workforce. When needed, a data protection impact assessment is performed. Employees are informed about the processing of their personal data via a dedicated HR Privacy Statement. A dedicated channel is put in place for our employees to exercise their data subject rights.

Employee data is protected from cyberattacks, given our explicit actions in that area (see section 3.2.1.4). In the exceptional event of a workforce strike or unavailability of workforce, business continuity plans are in place.

## Own workforce: metrics and targets (3.1.2)

### Targets related to managing material negative impacts, advancing positive impacts, and managing material risks and opportunities (3.1.2.1)

Based on our principle of local embeddedness, we have not defined group-wide key targets. None of the local ambitions qualify as targets sufficiently material from KBC's perspective to be included in this statement.

However, we do track the effectiveness of our policies, for example:

- With regard to gender diversity, the long-term ambition is to work towards a gender distribution at all leadership levels which is in line with the general workforce proportion. Our core countries and business units define the approach they deem necessary, adapted to the local culture and situation. As an absolute minimum, all legal obligations on the matter need to be implemented in every country. We monitor the evolution of the defined ambition levels on a yearly basis. The results of this monitoring exercise is reported to the ExCo.
- Several metrics (as mentioned below) are also monitored from a risk perspective (e.g., from a reputational risk angle).

### Characteristics of our employees (3.1.2.2)

To ensure consistency in the reported data throughout the group, we have determined a common definition that is approved and applied by all countries.

Employee numbers in this statement are in headcount, unless otherwise mentioned, and they are calculated at year-end. By 'headcount' we understand all people having an active labour contract with KBC, and receiving a regular salary.

By 'FTE' we mean all full-time equivalent employees, being calculated as 'total hours worked (excluding overtime) divided by the average hours worked in a full-time job'. Only people included in the headcount figure, have a corresponding FTE figure calculated.

The figures below deviate from the figures in Note 3.8 of the Consolidated Financial Statements because the calculation method is not the same (in Note 3.8, figures are based on averages at month-end during the calendar year).

Employee headcount by gender	31-12-2024
Male	17 241
Female	22 688
Other*	0
Not reported	-
Total	39 929

\* KBC does not register data related to another, often more neutral gender as specified by the employees themselves

**Employee headcount by country – countries with at least 50 employees representing at least 10% of total number of employees**

**31-12-2024**

Belgium	14 553
Czech Republic	11 432
Bulgaria	6 338

**Employees by contract type and gender (FTE), 31-12-2024**

	<b>Female</b>	<b>Male</b>	<b>Other</b>	<b>Not disclosed</b>	<b>Total</b>
Number of employees	20 979	16 609	0	-	37 588
Number of permanent employees	19 869	15 896	0	-	35 765
Number of temporary employees	1 017	665	0	-	1 683
Number of non-guaranteed hours employees	93	48	0	-	140
Number of full-time employees	17 321	15 443	0	-	32 764
Number of part-time employees	3 657	1 166	0	-	4 824

**Employees by contract type and geography (FTE), 31-12-2024**

	<b>Belgium</b>	<b>Czech Republic</b>	<b>Slovakia</b>	<b>Hungary</b>	<b>Bulgaria</b>	<b>Rest of the world</b>	<b>Total</b>
Number of employees	13 503	10 532	2 991	3 846	6 310	406	37 588
Number of full-time employees	10 047	9 842	2 910	3 701	5 882	382	32 764
Number of part-time employees	3 456	690	81	145	428	24	4 824

**Employee turnover<sup>1</sup> (headcount) and turnover rate<sup>2</sup>, 2024**

Turnover in headcount	5 394
Turnover rate	13.5%

1 Turnover: during the reporting period a number of employees left KBC, voluntarily or due to dismissal, retirement, or death in service

2 For the calculation of the turnover rate, we divided the total number of employee turnovers by the total number of employees at the end of the year

**Collective bargaining coverage and social dialogue (3.1.2.3)**

In total, 87% of KBC's employees are covered by collective bargaining agreements, and 88% are covered by workers' representatives participating in the social dialogue.

The table below shows, for each country in the European Economic Area (EEA) in which we have significant employment (this means: at least 50 employees by headcount representing at least 10% of our total employees), the rate of employees covered by a collective bargaining agreement and by social dialogue.

<b>Collective bargaining coverage and social dialogue, coverage rate, 2024</b>	<b>Collective bargaining coverage for employees – EEA</b>	<b>Social dialogue; workplace representation – EEA</b>
0-19%		
20-39%		
40-59%		
60-79%	Bulgaria	Bulgaria
80-100%	Belgium Czech Republic	Belgium Czech Republic

We have an agreement with our employees for representation by a European Workers' Council, signed on 15 November 2012.

## Diversity metrics (3.1.2.4)

### Employees at top management level\* (headcount) broken down by gender, 31-12-2024

	Female	Male	Other	Not disclosed	Total
Number of employees at top management level	70	197	0	-	267
% of employees at top management level	26.2%	73.8%	0.0%	-	100.0%

\* Top management level at KBC is defined as 'Top 300', a specific list of Senior Management Positions within the competence of Corporate HR as approved by the ExCo, and not including ExCo members.

### Distribution of total employees by age group (headcount), 31-12-2024

% of employees under 30 years old	13.5%
% of employees between 30 and 50 years old	56.2%
% of employees over 50 years old	30.3%

## Adequate wages (3.1.2.5)

We pay all our employees an adequate wage, at least in line with the minimum wages defined by the local legislation.

## Health and safety metrics (3.1.2.6)

### Health and safety metrics, 2024

% of employees covered by a health and safety management system	100.0%
Number of fatalities as a result of work-related injuries and work-related ill health, number of employees	0
Number of fatalities as a result of work-related injuries and work-related ill health, number of other workers working on our sites	0
Number of work-related accidents	79
% of work-related accidents	1.2%

## Compensation metrics (3.1.2.7)

### Compensation metrics, 31-12-2024

Gender pay gap	31.2%
Adjusted gender pay gap	3.2%
Annual total renumeration ratio	93

### Gender pay gap – contextual information

The gender pay gap represents the raw difference in average pay between male and female employees. This basic calculation highlights to some extent the gender pay gap, but it does not account for factors like salary differences across countries, different salary packages, local economic context, job roles or experience.

As KBC operates in different core countries with different salaries (in absolute figures) and different composition of workforce in terms of gender, the calculation of a gender pay gap at group level does not consider the influence of these differences.

Also, other gender-neutral and objective factors should be considered to get a better view on the pay gap. Therefore, we calculate an adjusted pay gap, following a weighted average methodology. All employees are divided in subgroups according to these 3 parameters: country, Hay level and managerial responsibility. According to our analysis, these are the factors which explain for the largest part the pay gap. We believe that this provides a more insightful view on gender pay gap.

The adjusted gender pay gap according to the above-mentioned method is 3.2%.

Further data analysis will be done per country and subgroup to detect other objective gender-neutral factors which can explain the remaining pay gap. Where necessary, actions will be taken to reduce it further.

### **Annual total remuneration ratio – contextual information**

For the Annual Total Remuneration ratio, the specific structure of KBC should be taken into account. Our core countries have large differences in local remuneration in absolute figures. Every country has its own CEO. The annual total remuneration ratio is therefore more meaningful and comparable if we consider such ratio at country level, by comparing the local highest paid individual with the local median remuneration.

### **Incidents, complaints and severe human rights impacts (3.1.2.8)**

#### **Numbers of incidents of discrimination including harassment, 2024**

Total number of incidents of discrimination, including harassment	17
Of which justified incidents/complaints of discrimination, including harassment	4
Number of complaints filed through channels for people in own workforce to raise concerns (other work related complaints)	9
Number of complaints filed through the National Contact Points for OECD	0

Regarding discrimination, it concerns cases on the grounds of gender, racial or ethnic origin, nationality, religion or belief, disability, age, sexual orientation, or any other form of discrimination – including harassment. We did not pay any fines or penalties nor did we receive any requests for compensation for damages as a result of the incidents and complaints disclosed in the table above. As a result, nothing was taken up in the financial statements.

There were no severe human rights incidents related to our employees in the reporting period, including cases of non-respect of the UN Guiding Principles on Business and Human Rights, ILO (International Labour Organisation) Declaration on Fundamental Principles and Rights at Work and OECD Guidelines for Multinational Enterprises. We did not pay any fines or penalties nor did we receive any requests for compensation for damages for incidents related to human rights. As a result, nothing was taken up in the financial statements.

The measurement of all the metrics in this section has not been validated by an external body other than the assurance provider.

## **Consumers and end-users (3.2)**

### **Consumers and end-users: impact, risk and opportunity management (3.2.1)**

#### **Policies related to consumers and end-users (3.2.1.1)**

In addition to respecting the regulatory environment in which we operate, we see it as our responsibility to embed KBC's material impacts on consumers, and the associated material risks, in our policies.

#### **Integrity Policy**

The Integrity Policy sets out the KBC principles on integrity and ethical behaviour. It addresses conduct risk (the risk arising from the inappropriate provision of financial services) and focuses on the following areas with respect to all our consumers:

- Protecting investors and insurance policyholders;
- Respecting rules on consumer protection including fair commercial practices in payment and lending services;
- Complaints handling;
- Data protection and privacy, confidentiality of information and duty of discretion.

For a full description of the Integrity Policy, we refer to section 4.1.1.1.

### **Code of Conduct for employees**

This Code of Conduct sets out our values, calls for responsible behaviour and addresses, among other things, key behaviour expected from all employees towards all our consumers, related to:

- data protection and discretion regarding confidential information;
- fair treatment of clients;
- provision of clear, straightforward and accurate information.

There is a key role for our product approval process (NAPP, see section 2.2.2.2) in the pre-sale context, the rule of only offering services appropriate for the client during sales and the analysis of breaches and handling complaints as part of fair client treatment in post-sales.

For more details regarding the Code of Conduct for employees, we refer to section 3.1.1.1.

### **Information Security Policy**

In order to protect all our clients and shareholders, we consider our Information Security Strategy a key element of our Information Security Governance. This is accomplished by the information security controls that we continuously implement and maintain. It is a dynamic, living set of security controls, based on the most appropriate elements of ISO standards, the NIST Cybersecurity Framework and our own experience with information security. At the same time, these controls also establish the binding regulatory requirements to which KBC adheres, including but not limited to the EU General Data Protection Regulation (GDPR) and Digital Operational Resilience Act (DORA). The nature of these key controls ranges from governance, prevention, detection and response, and covers the entire information security life cycle.

A 'Three Lines of Defence' model is in place across the organisation, as described in the Enterprise Risk Management Framework (ERMF). The Information Security Officers and Local Operational Risk Managers act as first line of defence. For the second line, the Operational Resilience division of Group Risk jointly covers information risks, including information security, IT-related risks and Business Continuity Management together with the local risk function. It also includes the Group Cyber Expertise and Response Team (CERT). Internal Audit provides independent reasonable assurance on the adequacy and effectiveness of the control environment, which constitutes our third line of defence.

The information security strategy, under the accountability of the Chief Risk Officer and the Chief Innovation Officer, applies to KBC and all its subsidiaries and covers the full IT-security universe.

#### **Whistleblower Protection Policy and Procedure**

This policy is relevant for all our consumers and end-users as unethical or illegal activities affecting consumers and end-users are also explicitly in scope of the policy, such as:

- breaches relating to financial services, products and markets (including the prevention of money laundering and terrorist financing);
- breaches in the area of consumer and investor protection;
- breaches affecting the protection of privacy and personal data and the security of network and information systems.

In addition to persons linked to a work-related environment (who are the main focus of the policy), anyone – including clients – can report a breach in the areas of financial services, products and markets. For a description of the Whistleblower Protection Policy and Procedure, we refer to section 4.1.1.1.

The Code of Conduct for employees, the Whistleblower Protection Policy and Procedure and the Information Security Policy are publicly available on [www.kbc.com](http://www.kbc.com).

#### **Human rights commitments**

As a financial institution, our highest risk in terms of potential involvement with human rights violations and potential human rights impact arises from our business relationships (through our credit and insurance portfolio, our advisory services, our asset management activities and our own investments). The KBC Human Rights Policy refers to other, more specific, sustainability policies and describes our process in place, which is in line with the OECD Guidelines for Multinational Enterprises, the ILO (International Labour Organisation) Declaration on Fundamental Principles and Rights at Work and the UN Guiding Principles on Business and Human Rights.

For our engagement towards consumers and end-users, we refer to section 3.2.1.2, and for the measures through which we provide and/or enable remedy for human rights impacts, we refer to sections 3.2.1.3 and 3.2.1.4.

Monitoring compliance with these Human Rights Policy commitments is embedded in our due diligence process (see section 1.2.4). In the reporting year, we did not identify any severe human rights issues and incidents related to our consumers and end-users.

#### **Alignment with internationally recognised instruments**

KBC considers internationally recognised instruments relevant to consumers, as demonstrated by the following:

- We are a signatory of the UN Global Compact Principles
- We apply the UN Guiding Principles on Business and Human Rights
- We are committed to respect the letter and the spirit of:
  - the United Nations Universal Declaration of Human Rights;
  - the OECD Guidelines for Multinational Enterprises;
  - other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

Our commitment to respect these instruments, and in particular the OECD Guidelines for Multinational Enterprises, includes the commitment to observe consumer interests, such as:

- fair marketing practices;
- provision of accurate, verifiable and clear information that is sufficient to enable consumers to make informed decisions;
- protection of consumers' privacy;
- information about available dispute resolution and redress options;
- accessibility of information in plain language and for disabled people.

Through our policies related to consumers and end-users and the actions and processes described in this chapter, we protect the human rights and interests of KBC's consumers in line with these commitments.

None of the OECD National Contact Points received a referral concerning KBC in the reporting year.

### **Processes for engaging with consumers and end-users about impacts (3.2.1.2)**

We have several processes in place for engaging with our affected consumers, their legitimate representatives, or with credible proxies that have insight into their situation.

We continuously follow-up on surveys and research on, for example, consumer behaviour (at group as well as local level). We regularly organise working groups with consumers to gain their insights. In Belgium, for example, we organise annual roundtables (in 2024, the theme was the accessibility of our products and services). We also address consumer-related topics on an ad hoc basis in our regular engagements with the ESB. In close collaboration with our Complaints Management departments, we carefully follow up on consumers' complaints. Our Sustainability Dashboard follows up on the implementation of our sustainability strategy, including our regular stakeholders' dialogue and the follow up on the concerns of our stakeholders. The dashboard is presented twice a year to the ExCo and the Board.

The follow-up of information gathered via stakeholders' engagements is organised by different departments. The general or senior general manager of each of these departments has the operational responsibility to ensure that this engagement happens and that the outcome is communicated to the manager who is best placed to take the views and interests of the stakeholders into account. Through our different engagements with consumers, we also aim to gain insight into the perspectives of consumers and end-users that may be particularly vulnerable to, for example, access to our products and services (e.g., consumers with disabilities, refugees), financial literacy (e.g., students and young adults). With respect to marketing practices and privacy, specific attention is given to the situation of children.

### **Processes to remediate negative impacts and channels for consumers and end-users to raise concerns (3.2.1.3)**

For our general approach and processes related to preventing and providing a remedy to negative impacts (in cases where we would cause or contribute to a material negative impact to consumers), we refer to our NAPP process and other actions described in section 3.2.1.4.

We have different channels through which our consumers and other stakeholders can voice complaints. We aim to address these concerns and consequently improve our products, services and processes. We recommend that our consumers first contact their bank branch, relationship manager or insurance agent. This is the person who knows the consumer best and is best placed to help find a tailored solution to the consumers' potential grievances. We also have formal channels in place in all our core countries through which our consumers can report complaints. Information about these channels is available on the commercial websites of the various subsidiaries in our core countries, in the banking apps and in brochures and product sheets. We closely follow up all complaints and handle these within strict time frames with appropriate action. The complaints handling function is assigned to an independent unit or person outside of the commercial organisational structure. Where needed, the Compliance department is involved. The complaints channels are actively used by a broad range of consumers. The overall numbers, evolutions and nature of the complaints are monitored and reported at local entity or business unit level, and to the ExCo and Board. The reports show that our consumers are aware of, and trust our complaints channels and processes. Moreover, the relevant product or service department analyses ex-post all complaints together with the Risk and Compliance departments in order to assess needs for improvement.

In addition to our own complaints channels, our clients have access to the Alternative Dispute Resolution Channels for consumers that have been recognised for financial services by authorities in our core countries, such as Ombudsfin for banking services and Ombudsman Insurance for insurance disputes in Belgium. KBC is a member of these dispute resolution bodies.

In addition to persons in a work-related environment, being the legal target group of the whistleblowing channel, anyone can use this channel to report unethical or illegal activities in the area of financial services, products and markets and enjoy protection against retaliation. Reporting can also be done anonymously.

We have dedicated channels for our clients and end-users in all countries and subsidiaries, to exercise their privacy and data protection rights, including a Data Protection Officer (who can be contacted for all issues related to the processing of their personal data) and groupwide hotlines that serve as a single contact point to report cybercrime against KBC or its clients (e.g., Secure4U in Belgium). Our complaints channels are also directly accessible for consumers and end-users in their contact with KBC business relationships such as insurance agents or other business relationships that distribute our products, or to whom client facing activities are outsourced. Certain sustainability-related inquiries or complaints are addressed by the Group Corporate Sustainability department (via [csr.feedback@kbc.be](mailto:csr.feedback@kbc.be)).

#### **Taking action on material impacts on consumers and end-users, and approaches to managing material risks and pursuing material opportunities related to consumers and end-users, and effectiveness of those actions (3.2.1.4)**

In addition to the above-mentioned policies, we have several processes and actions in place to manage, assess and follow up the impacts, risks and opportunities of our products and services related to consumers and end-users.

We did not identify any actual material negative impacts on our consumers and end-users in the reporting year. Although we do our utmost to avoid this, we might still have a potential negative impact in the future on our consumers and end-users related to privacy and marketing practices, and through cyber risks.

### **Integrating social topics into the risk management framework and compliance risk management**

We refer to section 2.2.2.2 (describing the action on ESG integration in our Risk Management Framework (RMF)) for an overview of the continuous efforts that we make to integrate ESG risks (including social risks) into our RMF and processes. We are taking a step-by-step approach whereby follow-up actions are defined based on the insights gained from our previous actions/analyses. Our approach advances in sync with improvements in the availability and quality of data and methodologies.

Specifically with respect to social risks:

- within our Risk Appetite, a specific objective is dedicated to responsible behaviour;
- we carried out a pilot risk identification exercise on social risks to identify the most material social risks for KBC. Risks are identified for the full value chain (covering non-financial risks for our own and upstream operations, but also financial risks for downstream operations, e.g., in case corporate clients do not respect social legislation or standards);
- social risk scenarios were included in our stress testing mix, e.g., by applying stress on high social risk sectors/counterparts and by simulating a cyber event;
- within our operational risk management processes, several controls are in place to manage cyber risk (see also under 'Managing cyber risks' below), model risk (e.g., avoiding bias in models), business continuity (e.g., ensuring continuity of services provided to clients), legal risk and process risk (ensuring safe, reliable and efficient processes and services for clients);
- from a credit and reputational risk perspective, we use a sectoral Environmental and Social Heatmap within our loan origination and monitoring processes.

Protection of consumers, investors and policyholders, and data protection involve compliance risks that are in scope of the Compliance function:

- The following risks are identified as compliance risks: fair marketing practices, observance of the rules regarding provision of clear, straightforward and accurate information as specified in legislations related to various products, offering products in line with the client's needs and profile, protection of the personal data of clients, etc.;
  - We continuously follow up on regulatory evolutions, interpret them and define requirements, when necessary. The compliance function advises on the correct implementation while also first line controls are carefully followed up on and effective implementation is monitored;
  - Checks are installed in the NAPP process as described in the action on NAPP (see below);
- Several initiatives are taken to protect our clients' data, and governance is in place to ensure that General Data Protection Regulation (GDPR) is observed and the privacy of our clients is protected. Among others things,
  - we perform Data Protection Impact Assessments when required;
  - we have established a Cloud Enablement Forum to assess and mitigate risks when data is exchanged with third parties in the context of cloud services;
  - procedures are in place regarding notification and handling of potential data breaches;
  - mandatory training for all employees on privacy and data protection is established (general and job-specific);
  - within every KBC entity, the necessary information for our clients on how their personal data is handled is publicly available in our privacy and data protection statements;
  - channels are in place via which our clients can exercise their data subject rights;
- We have legal checklists and guidance in place which must be considered when developing a new marketing campaign. Furthermore, proactive advice of the compliance function is mandatory before the launch of a new campaign (or any marketing-related documents). In some cases, pre-approval of specific documentation and marketing material by local supervising authorities is required.

### **Managing cyber risks**

Information- and cyber-related risks are identified and managed by dedicated teams in the first line of defence (Information Risk Management (IRM) team). The second line of defence executes several assurance activities regarding cyber threats and cyber risk-related events (such as setting standards, setting and testing controls, and groupwide reporting on actions and events). See also the above-mentioned Information Security Policy.

Management of cyber risk is integrated into the Risk Management Framework, including analysis, reporting, registration and follow-up. This ensures alignment with broader risk oversight and KBC objectives.

The actions implemented to manage cyber risk have a groupwide coverage and are part of a continuous process.

KBC actively identifies cyber risks by:

- monitoring the evolving cyber threat landscape, leveraging cyber threat intelligence from trusted sources, including industry reports, open and commercial threat information feeds, and government information. This ensures early awareness about active and emerging cyber threats;
- structured vulnerability management to identify, assess, and address security weaknesses across IT systems and infrastructure;
- comprehensive attack surface management to identify and map all externally exposed assets, identifying areas at risk for cyber threats;
- third-party and supply-chain management. A thorough vetting process is in place to assess the cybersecurity practices of suppliers, contractors and partners before engagement. By maintaining transparency and collaboration with third parties, KBC mitigates risks associated with external dependencies and ensures a secure and resilient supply chain;
- regular ethical hacks, challenges, tabletop exercises and stress tests to recognise cyber threats;
- targeted training and awareness programmes ensure employees across all levels are equipped to identify and report suspicious activities. By fostering a culture of vigilance and preparedness, we strengthen our workforce against cyber risks. To achieve this, we – among other things – regularly conduct internal phishing tests;
- monitoring the evolving cyber fraud landscape to enhance client protection and safeguard stakeholder data and financial assets. Continuous analysis and adaptation of security measures supports the commitment to stakeholder protection.

By combining cyber threat intelligence with insights and findings from the above activities, we proactively identify, assess and understand cyber risks that could target our company and stakeholders, enhancing our ability to defend against and respond to cyber threats effectively. Cyber risks are specifically analysed based on likelihood and impact, enabling risk prioritisation and mitigation efforts. Mitigation strategies include implementing robust technical controls, and ensuring adherence to best practices, industry standards and government regulations.

### **New and Active Products Process (NAPP) and governance framework to proactively identify, prevent, remedy and manage potential negative impacts and risks related to consumers and end-users**

As specified in section 2.2.2.2, NAPP is an important tool to mitigate several ESG risks (in particular related to consumer protection and greenwashing). It is a groupwide process for KBC and all its subsidiaries that are active in the financial sector or acting as intermediaries for financial services (for all of their products, services and client-facing processes which directly impact the external client). Related to consumers and end-users, it aims to:

- ensure fair treatment of the client;
- safeguard the strategic fit of products/services;
- pro-actively identify and mitigate risks related to products, services and changes to client-facing processes which might negatively impact the client and/or KBC;
- ensure compliance with regulation.

Within NAPP, all relevant risks need to be assessed. In particular for social risks, the control functions:

- ensure that the launch of any new products or client-facing processes complies with the legal and regulatory provisions in place, such as MiFID II, the Insurance Distribution Directive (IDD), consumer protection regulations, Mortgage Credits Directive (MCD), Consumer Credits Directive, Payments Account Directive and other local and EU Regulations;
- assess risks related to data protection and conformity with General Data Protection Regulation (GDPR), ethical considerations (including non-discrimination of client groups, social inclusion), anti-money laundering and fraud, the use of models (including AI models), information security and ESG considerations.

Through advice and conditions established in the NAPP process, we determine the actions that need to be implemented to prevent negative impacts or to mitigate risks. The maturity of the NAPP process is periodically followed up and reported.

### **Actions regarding opportunities**

We pursue material opportunities (i.e. advisory services related to, among other things, subsidies, (emerging) sustainability-related legislation) linked to consumers and end-users via our advisory services like webinars, third-party services and face-to-face interactions.

### **Actions that positively contribute to improved social outcomes for our consumers and end-users**

We have additional actions in place that positively contribute to improved social outcomes for our consumers and end-users, such as:

- allowing access to financial services at fair market conditions;
- providing banking, insurance and asset management products and services that are accessible to everyone in accordance with their needs;
- enhancing financial literacy in Belgium among young adults to create awareness on debt pitfalls;
- by playing a role in the financial resilience of our consumers by, for example, protecting them from the financial consequences of healthcare risks with the insurance products we provide;
- by taking up our role in society and organising information sessions and campaigns to create awareness among our clients on cyber risks.

### **Resources allocated to the management of material impacts**

As highlighted above:

- in first line, a Data Protection Officer (DPO) can be contacted by our consumers for all issues related to the processing of their personal data. The DPO is supported by colleagues in the Compliance department to adequately and timely address the reported issues;
- in second line, our material risks in the context of consumers and end-users are managed via the NAPP process. This process also allows us to address the negative and advance positive impacts. The NAPP process is applied groupwide and involves several departments within the organisation (such as the Compliance department, Risk department, Legal department, Business departments, senior managers presiding over the NAPP);
- moreover, our internationally recognised and certified Group Cyber Emergency and Response Team engages in specific activities related to cyber crisis and incident handling, cyber threat intelligence, cyber resilience and readiness training.

## Consumers and end-users: metrics and targets (3.2.2)

### Targets related to managing material negative impacts, advancing positive impacts and managing material risks and opportunities (3.2.2.1)

We do not have specific time-bound and outcome-oriented targets or indicators related to reducing negative impacts and/or advancing positive impacts and/or managing material risks and opportunities related to consumers and end-users.

We refer to sections 3.2.1.4 and 3.2.1.1, where we explain the ongoing processes in which we track the effectiveness of our policies and actions. Our level of ambition is:

- to not cause any material negative impacts on our consumers and end-users;
- to advance positive impacts where possible;
- to manage all our material risks and opportunities related to consumers and end-users.

## Governance information

General

Environment

Social

Governance

## Business conduct (4.1)

### Business conduct: impact, risk and opportunity management (4.1.1)

#### Business conduct policies and corporate culture (4.1.1.1)

Responsible business conduct is crucial for KBC. It allows us to gain and keep the trust of our stakeholders, which is the foundation of our existence and our 'social licence to operate'. Our corporate culture is a key enabler for embedding responsible and ethical behaviour throughout our organisation. This section lists our policies related to business conduct matters. These policies underpin the role we have as a financial institution in society and guide our day-to-day decisions and interactions.

In relation to these policies we organise recurrent awareness campaigns and mandatory training (in the form of, e.g., in-class training, web-based learning courses and webinars) for all employees within KBC. These cover business conduct topics such as whistleblowing; anti-corruption and anti-bribery; tax strategy; anti-money laundering and countering the financing of terrorism; group ethics and fraud; integrity and responsible behaviour. We offer specific mandatory training for every new employee and a three-yearly mandatory update training course for all staff (including top management, the ExCo and employees in functions at risk), specifically linked to the codes of conduct and the anti-corruption programme. In 2024, 99% of the target group followed the training. Full awareness and commitment at ExCo and Board level is assured by ExCo and Board approval of the Group Anti-Corruption and Bribery Policy and an explicit preceding statement about the anti-corruption culture and zero tolerance by

the CEO and the Chairman of the Board. This ensures that we create and maintain a satisfying awareness and knowledge level among all employees that is commensurate with their business activities and position.

More detailed information regarding training on ethics, avoiding conflicts of interest and combating corruption, anti-money laundering and data protection are provided in the 'Corporate Governance Statement' section (not audited).

### **Sustainability Policy Framework**

The Sustainability Policy Framework encompasses all our sustainability-related policies (see section 2.2.2.1). It describes responsible behaviour and business ethics as the basic layer of sustainability at KBC.

### **Integrity Policy**

The Integrity Policy sets out the KBC principles on ethical behaviour and integrity and the values of KBC linked to its strategy, which are essential components of sound business practices. It covers the identification and management of compliance risks. A core topic is 'conduct risk', a concept that identifies the risk arising from the inappropriate provision of financial services.

The Integrity Policy focuses primarily on the following areas, for which – where appropriate – specific group-wide compliance rules have been issued:

- Preventing the financial system from being used for money laundering and terrorism financing (including human trafficking activities, which are often underlying offences), observing embargoes, and preventing financing of proliferation of weapons of mass destruction;
- Tax fraud prevention;
- Protecting investors and insurance policyholders;
- Respecting rules on consumer protection, including fair commercial practices in payment and lending services;
- Complaints handling;
- Data protection and privacy, confidentiality of information and the duty of discretion;
- Fostering ethics and responsible behaviour as the foundation on which the strategy is built;
- Coordinating fraud prevention;
- Complying with anti-discrimination legislation;
- Respecting the governance aspects of CRD IV and V, Solvency II and/or local laws, and the provision of advice on outsourcing and sustainability regulations.

The policy describes the accountabilities within KBC related to the management of compliance risks and the role of the Compliance function. The Compliance function is preventive when identifying, assessing and analysing risks, and is controlling when monitoring, investigating and supervising the observance of the Integrity Policy.

### **Integrity Policy**

Scope	Applicable to all employees within KBC and its subsidiaries. It sets the minimum requirements for all these entities, which are required to draft their own local integrity policy, taking into consideration, where needed, local provisions for the activities performed.
Most senior level accountable	This policy is approved by the Board. The ExCo is accountable for its elaboration and implementation. Top management is responsible for the implementation of the policy and for the management of the compliance risk.
Consideration key stakeholders	Treating our clients and all other stakeholders in a fair, honest and professional manner is a key consideration in the Integrity Policy.
Disclosure	The Integrity Policy is made available to all employees through internal communication channels. Dedicated awareness campaigns are regularly organised for many topics addressed by the policy.

### **Code of Conduct for employees**

The way in which we expect our employees to behave responsibly is outlined in our Code of Conduct for employees (see also section 3.1.1.). It stresses the importance of a strong corporate culture that calls for responsible behaviour and explicitly addresses the following business conduct matters (non-exhaustive):

- Fighting money laundering and terrorism financing;
- Zero tolerance for fraud;
- Protection of investors and capital markets;
- Data protection and confidential information;
- Client focus and avoidance of conduct risk;
- Tax laws and regulations;
- Zero tolerance for corruption;
- Preventing conflicts of interest;
- Strict rules on gifts, entertainment and sponsorship;
- Whistleblowing and general speak-up culture;
- Competition rules.

### **Anti-Corruption and Bribery Policy**

The Anti-Corruption and Bribery Policy provides clarity about KBC's zero tolerance for all forms of corruption for all employees and third parties with whom KBC has a contractual relationship and sets out the criteria and principles for avoiding conflicts of interest. The following aspects are part of this policy:

- Top-level commitment to and governance of the KBC Anti-Corruption Programme;
- Anti-corruption procedures and controls in accounting;
- Investigation of alleged bribery cases by independent investigation units;
- Annual group-wide risk assessment on corruption and bribery risks;
- Internal controls, record-keeping and reporting;
- Ethical and anti-bribery due diligence and anti-corruption clauses in contracts;
- The principles related to 'Bribery and corruption' that are embedded in the screening methodology for investment decisions (including proprietary investments, investments conducted on behalf of clients and for the investment funds managed by KBC).

The functions that are most at risk in respect of corruption and bribery are in the following departments: Commercial Activities, Procurement, Sales, Marketing, Sponsorship, Lobbying, ICT and Real Estate, and departments involved in open banking and contracting third parties.

### **Anti-Corruption and Bribery Policy**

Scope	Applicable to all employees of KBC and its subsidiaries as well as third parties with whom KBC has a contractual relationship (e.g., suppliers, joint ventures, service providers, etc.).
Most senior level accountable	This policy is approved by the ExCo and the Board. Top management is responsible for implementation in every entity.
Reference to third-party agreements	The policy is based on principle 10 of the UN Global Compact and the OECD Guidelines for Multinational Enterprises on corruption.
Consideration key stakeholders	The objective of this policy is to protect our clients, our business relationships and society against bribery and corruption. It aims to ensure that everyone, including all employees, is aware of their role and KBC's zero tolerance in this respect.
Disclosure	Published externally on <a href="http://www.kbc.com">www.kbc.com</a> . Available internally for all employees.

## **Whistleblower Protection Policy and Procedure**

Our Whistleblowing Policy outlines the general principles and procedures for reporting concerns related to unethical or illegal activities within our organisation (see also section 3.1.1.1).

Our goal is to ensure that all employees or other stakeholders, regardless of their location, feel empowered to raise concerns and feel protected when doing so. By fostering an environment where whistleblowing is encouraged and safeguarded, we aim to uphold our core values and promote a culture of responsible behaviour throughout the entire group.

KBC has set up specific whistleblowing channels where people can raise their concerns (including in an anonymous manner) without having to fear retaliation. As a minimum, reports can concern breaches in the 10 areas of Union law enumerated in EU Directive 2019/1937 on the protection of persons who report breaches of Union law and in the areas added by local legislation. All reports are investigated by an independent investigation unit, where confidentiality and objectivity are guaranteed. The compliance officer reports the results of the investigations to the ExCo via the customary reporting lines. Mitigating actions are taken if necessary.

Beyond the (legally required) procedures for following up on reports by whistleblowers, KBC has broadened the scope of the Whistleblowing Policy as follows:

- The scope of the content has been broadened to include immoral or unethical conduct and conduct that compromises the credibility and reputation of the KBC group in general (including corruption and bribery);
- The scope of who can report has been broadened from persons in a work-related environment (being the legal target group of the whistleblowing channel) to anyone who reports unethical or illegal activities in the area of financial services, products and markets. They also benefit from the protection against retaliation.

## **Anti-Money Laundering Policy**

The objective of this policy is to establish the general framework for the fight against money laundering and terrorism financing throughout KBC. We are committed to compliance with high standards of anti-money laundering (AML) and countering the financing of terrorism (CTF). Accordingly, management and employees are required to adhere to these standards in preventing the use of our products and services for money laundering or terrorism financing purposes.

To this end, all credit and other financial institutions that are part of KBC are expected to develop a comprehensive AML programme. It must be based on the Group Compliance Rules, which encompass 'Know Your Customer' and 'Know Your Transactions' requirements. The AML programmes are further transposed into local procedures, taking into account local regulatory requirements and guidelines issued by the European Banking Authority.

In addition, as part of our Compliance Monitoring Programme, we perform recurrent AML/CTF-related quality controls in order to ensure the effectiveness of our instructions, procedures and processes in this domain.

### **Group Anti-Money Laundering Policy**

Scope	Applicable to all credit and other financial institutions within KBC.
Most senior level accountable	The ExCo and in particular the Group Chief Risk Officer, who is a member of the ExCo.
Consideration key stakeholders	The objective of the policy is to protect our clients, our business relationships and society against money laundering and to counter the financing of terrorism. KBC complies with strict regulation and legislation to mitigate these risks.
Disclosure	Published externally on <a href="http://www.kbc.com">www.kbc.com</a> . The Group Compliance Rules, which specify the associated requirements and instructions, are available internally for all employees.

### **Dealing Code**

The Dealing Code contains measures to avoid insider dealing and market manipulation. It aims to prevent key employees and managers from knowingly or unknowingly performing transactions that are viewed as constituting market abuse. The Code describes prohibited conduct, the corresponding requirements, the duty to report personal transactions to the compliance officer and the relevant conditions. It further requires a list to be drawn up of key employees, who cannot execute personal transactions during periods considered sensitive, called blocking periods. Transactions by employees with a managerial responsibility as well as persons connected with them need to be reported to the Belgian Financial Services and Markets Authority (FSMA).

Furthermore, the Code describes the duties of the compliance officer, such as keeping a list of key employees and notifying them of the existence and content of the Dealing Code. The compliance officer also performs regular checks to ensure that the rules imposed are complied with and takes measures where necessary.

### **Dealing Code**

Scope	Applicable to KBC and its subsidiaries and in particular all key employees and managers as defined in the policy.
Most senior level accountable	The ExCo is accountable for the implementation of the policy.
Consideration key stakeholders	The objective of this policy is to protect our clients, our business relationships and society against Insider Trading, Unlawful Disclosure of Inside Information and Market Manipulation.
Disclosure	Published externally on <a href="http://www.kbc.com">www.kbc.com</a> . Every person in scope of the Dealing Code is notified of its existence and content and needs to confirm that they have read and understood the Code and have taken action to comply with it.

### **Ethics and Fraud Policy**

This policy aims to ensure that KBC takes all necessary steps to protect the good name, reputation and assets of KBC and its subsidiaries and of all employees, clients, suppliers and other stakeholders. This includes developing processes and procedures, monitoring, creating awareness and training to prevent fraud and misconduct.

It outlines the Fraud Risk Management Process, which consists of the following interdependent and mutually reinforcing steps:

- Establishing an anti-fraud culture;
- Performing fraud risk assessments;
- Implementing preventive measures;
- Implementing detection controls;
- Establishing a clear fraud response protocol;
- Establishing monitoring and reporting practices.

### **Ethics and Fraud Policy**

Scope	Applicable to KBC and its subsidiaries.
Most senior level accountable	Top management of the business units is responsible for the implementation of the policy.
Consideration key stakeholders	Integrity of our operations and the protection and interests of our stakeholders and our clients are placed at the forefront of fraud risk assessments and policy implementation. The policy has been designed and implemented to provide comprehensive protection for assets of both KBC and our stakeholders.
Disclosure	Published externally on <a href="http://www.kbc.com">www.kbc.com</a> .

### **Tax Strategy**

The general objective of our Tax Strategy is to ensure that we act as responsible taxpayers based on professionally executed tax compliance and legitimate tax planning driven by valid business purposes. Consequently, our employees are not allowed to provide any kind of advice or assistance to clients in terms of tax avoidance or the violation of regulations. Our Tax department operates independently from the business and is mandatorily involved in the NAPP process. We have proactive tax risk management and our tax compliance is based on robust systems, tools and procedures. Moreover, there is full transparency both to the public (e.g., disclosure of country-by-country tax figures (we refer to Note 3.11 in the consolidated income statement), tax rulings) and to the tax authorities.

### **Tax Strategy**

Scope	The KBC tax strategy applies to the entire group.
Most senior level accountable	This policy is approved by the ExCo and the Board. The General Manager of Group Tax is responsible for the implementation of the Tax Strategy.
Consideration key stakeholders	Our Tax Strategy has been drafted taking into account the interests and expectations of a wide base of key stakeholders, including tax administrations and governments, regulators, investors and shareholders, non-governmental organisations, the media and the general public, our clients and our employees.
Disclosure	Published externally on <a href="http://www.kbc.com">www.kbc.com</a> and available internally for all employees.

### **Sustainability Code of Conduct for Suppliers**

Our Sustainability Code of Conduct for Suppliers ensures that suppliers pay attention to and comply with social, ethical and environmental principles. It informs our suppliers that KBC is entitled to conduct interim screenings to evaluate whether suppliers comply with the agreed sustainability principles. To this end, KBC leverages external and internal databases which provide signals about suppliers. Signals such as lawsuits and other wrongdoings (e.g., negative media attention) of suppliers are captured, evaluated and decided upon by Procurement in consultation with the relevant competent departments (such as, e.g., Group Corporate Sustainability). If any violations come to light that cannot be fundamentally resolved within a reasonable period of time, KBC has the right to terminate all contracts with the supplier concerned.

### **Sustainability Code of Conduct for Suppliers**

Scope	Applicable to all supplier entities (including parent companies and subsidiaries of KBC's contractual counterparties).
Most senior level accountable	The Sustainability Code of Conduct for Suppliers is part of our sourcing relationships, which are largely regulated via contracts. Contract ownership is decentralised at KBC and lies with the beneficiary of the goods and services. In practice, the key beneficiary is usually the Senior General Manager of the department receiving the goods or services (i.e. top management).
Reference to third-party agreements	This policy contributes to our commitment to observe the UN Global Compact Principles.
Consideration key stakeholders	This policy has been challenged by our ISB, representing the interest of key stakeholders.
Disclosure	Published externally on <a href="http://www.kbc.com">www.kbc.com</a> .

### **Corporate culture**

To grow and maintain the trust of our stakeholders, it is crucial that all our employees always behave responsibly in everything they do, across all layers of the organisation. Responsible behaviour is a cornerstone of our corporate culture and is strongly rooted in all the above-mentioned policies, including the related training and awareness programmes. We have developed a 'Responsible Behaviour Compass' for our employees, a document that outlines basic principles of common sense around responsible behaviour and fair decision-making. It addresses the risks, standards, policies, processes and structures involved in maintaining KBC's high standards on responsible behaviour.

The foundations of our corporate culture are our three core values: be respectful, be responsive and be result-driven. These three attitudes are closely linked to each other and cannot be seen independently from one another. Our corporate culture is summed up in the acronym 'PEARL+' and was established in 2012, when the Strategy was updated. It was decided by the ExCo. We evaluate our corporate culture by conducting employee engagement surveys every six months (see 3.1.1.2). We refer to the 'Our business model' section (which is not subject to external assurance) for more details.

Responsible behaviour is embedded in the whole organisation and is not limited to managers, but is expected from all our employees. All employees should be aware of the company culture, in which people are encouraged to feel both empowered and accountable to report unethical behaviour. As there is space for alternative views and even mistakes, without taboos, speaking up is encouraged at three levels: peer to peer, towards line management and/or via the whistleblowing channels (we refer to our whistleblowing policy). Observed violations of our Code of Conduct for employees, such as unlawful behaviour, are sanctioned in line with work regulations.

### Management of relationships with suppliers (4.1.1.2)

KBC is committed to meeting the contractual terms that have been agreed with its suppliers. This includes paying each supplier in a timely manner, i.e. within the contractual payment period. We monitor the timeliness of our payments to suppliers and report to a steering committee at management level. Cases where timely payment is not possible because of certain circumstances, such as issues that are to be resolved with the supplier, are closely followed up. In this regard, all suppliers, including SMEs, are treated equally.

When it comes to managing the risks as well as ESG-related impacts associated with our supplier relationships, we have several processes in place throughout the selection process and contract lifecycle.

First of all, we have defined a blacklist of suppliers based on ESG factors. In this way, companies that are involved, either directly or via a subsidiary, in controversial activities such as the production of nuclear weapons or white phosphorus are excluded from being selected as candidate suppliers. Furthermore, in preparation for a purchase, candidate suppliers are screened as part of our onboarding process. This screening includes a check on financial health, embargoes, lawsuits and convictions. We also perform dedicated ESG screening based on a standard questionnaire for all purchases above 250 000 euros and other purchases when deemed appropriate. KBC encourages suppliers to provide detailed ESG-related information in their product and service offers. The provision of such information can be considered as a positive criterion during supplier selection.

On concluding a contract, each supplier must agree to comply with the social, ethical and environmental principles in our Sustainability Code of Conduct for Suppliers (as described in section 4.1.1.1).

During the contract lifecycle, we actively monitor the contractual performance of our suppliers. In addition, we screen active suppliers on a monthly basis using the KBC internal alerting system, which includes financial health, embargoes, lawsuits and convictions. The setup for monitoring suppliers' ESG-related performance is reviewed as part of the wider reviews of our procurement processes and tooling.

### Actions in relation to business conduct policies (4.1.1.3)

In addition to the above-mentioned policies, we have actions in place to manage, assess and follow up the impacts and risks related to business conduct matters.

#### Integrating governance topics into the risk management framework and compliance risk management

We refer to section 2.2.2.2, describing the action on ESG integration in our Risk Management Framework (RMF), for an overview of the continuous efforts that we make to integrate ESG risks (including governance risks) in our RMF and processes.

Specifically with respect to governance risks, we have implemented the following:

- Within our risk appetite, specific objectives are dedicated to promoting strong corporate culture, corporate governance and risk & compliance management;
- Governance risks are assessed as part of the NAPP (as described in section 2.2.2.2). In particular for business conduct, within the NAPP process risks and potential negative impacts are assessed and necessary actions defined related to conduct risk (the risk of offering financial services and products in an inappropriate or unethical way), fraud, sustainability, anti-money laundering requirements, embargoes, tax fraud and regulatory incompliancy;
- Management quality is assessed for large corporates as part of the loan origination process (in the context of credit risk management).

Our compliance risk management focuses in particular on integrity, including ethical behaviour and management of conduct risk. Protection of consumers, investors and insurance policyholders, prevention of money laundering and terrorism financing, corruption and bribery, fostering ethics and responsible behaviour and aspects of corporate governance are core compliance domains. While the Executive Committee and top management of business units are primarily accountable for the management of compliance risks, the compliance function also plays a fundamental role.

#### Prevention and detection of corruption and bribery (4.1.1.4)

We have established several procedures to prevent, detect and address allegations or incidents of corruption and bribery. They are mentioned in the Anti-Corruption and Bribery Policy (we refer to section 4.1.1.1) and involve (this list is not exhaustive):

- Conflict of interest policies;
- Policy on Gifts, Entertainment, Donations and Sponsorship;
- Due diligence, pre-employment screening when appointing board members and top management;
- Four-eye principle in our recruitment process;
- Specific anti-corruption procedures and controls in accounting;
- Yearly anti-bribery and corruption risk assessments in each entity, taking into account the country risk, sector risk, transaction risk, business opportunity risk, business partnership risk and due diligence risk;
- Mandatory training and awareness sessions for all staff;
- Implementation of various first-line controls in the business lines to prevent corruption and bribery, which are additionally monitored in compliance monitoring programmes by the compliance function;
- Record-keeping of breaches.

Our Whistleblower Protection Policy, our speak-up culture as mentioned in the Code of Conduct for employees, our Anti-Money Laundering Policy and our Sustainability Code of Conduct for Suppliers (including anti-corruption due diligence procedures and written commitments and clauses in all contractual agreements) support our approach to corruption and bribery. We refer to section 4.1.1.1 for further information on these policies.

The investigations related to corruption and bribery are conducted by an independent investigation unit under the supervision of the compliance function. Incidents and outcomes of corruption- and bribery-related investigations (if any) are reported to local management or the ExCo, the Group ExCo and the RCC.

For more information on training related to corruption and bribery, we refer to section 4.1.1.1.

## Business conduct: metrics and targets (4.1.2)

### Confirmed incidents (4.1.2.1)

KBC has no convictions nor received any fines for violating anti-corruption and anti-bribery laws during the reporting period. This information is not externally validated by an external body other than the assurance provider.

### Payment practices (4.1.2.2)

As mentioned in section 4.1.1.2, KBC is committed to paying all its invoices from suppliers (including suppliers which are SMEs) on time. At KBC, the most commonly used standard payment term is 30 days after the receipt of a correct invoice. This payment term is applied to about 88% of our annual invoices by value, and is used across KBC and its subsidiaries and equally for all suppliers and types of invoices. For invoices related to our leasing activities in Bulgaria, which represent 11% of our annual invoices, we use a standard payment term of 5 days. We further note that for less than 1% of our annual invoices, the payment term deviates at the level of local subsidiaries or as a result of negotiations at the level of individual contracts.

In 2024, the average number of days between the payment date and the date of receipt of an invoice was 16 days. This metric is not externally validated by an external body other than the assurance provider. It was calculated for the first time for the purpose of this Sustainability Statement. The calculation is based on actual invoice data from KBC and its subsidiaries in our five core countries and excludes payments to employees, intra-group items and payments to tax authorities. The consolidated figure at the level of KBC represents a weighted average based on the total number of invoices.

Cases where KBC does not respect the payment period are mostly related to processing issues, such as incorrect invoices where, for instance, the amount, price or VAT is not in line with the data in our financial systems. The team that resolves these issues has to report to our Procurement management the number of blocked invoices and the period needed to resolve the issues.

Additionally, we note that KBC (including all its subsidiaries) does not have any outstanding legal proceedings for late payments.

## **Independent auditor's limited assurance report on the consolidated sustainability information of KBC Group NV**

### **FREE TRANSLATION OF A LIMITED ASSURANCE REPORT ORIGINALLY PREPARED IN DUTCH**

To the general meeting

In the context of the legal limited assurance engagement on the consolidated sustainability information of KBC Group NV ("the Company") and its subsidiaries (jointly "the Group"), we provide you with our report on this engagement.

We were appointed by the general meeting of May 2, 2024 in accordance with the proposal of the board of directors on the recommendation of the audit committee and as presented by the workers' council of the Company to perform a limited assurance engagement on the consolidated sustainability information of the Group included in the section Report of the Board of Directors – Sustainability statement of the Annual report KBC Group 2024 as of December 31, 2024 and for the year ended on this date (the "sustainability information").

Our mandate will expire on the date of the general meeting deliberating on the annual accounts for the year ended December 31, 2024. This is the first year that we have performed the assurance engagement on the sustainability information of the Group.

#### **Limited assurance conclusion**

We have performed a limited assurance engagement on the sustainability information of the Group.

Based on the procedures performed and assurance evidence obtained, nothing has come to our attention to cause us to believe that the sustainability information of the Group is in all material respects:

- not prepared in accordance with the requirements of article 3:32/2 of the Companies' and Associations' Code, including compliance with the applicable European standards for sustainability information (European Sustainability Reporting Standards (ESRS));
- not in compliance with the process carried out by the Group to identify the sustainability information ("the Process") in accordance with the European Standards as disclosed in section 'Description of the processes to identify and assess material impact, risks and opportunities (1.4.1)' of the sustainability information; and

- not in compliance with article 8 of EU Regulation 2020/852 (the "Taxonomy Regulation") regarding the publication of the disclosure included in the section EU-taxonomy – detailed tables of the Annual report KBC Group 2024.

Our conclusion on the sustainability information does not extend to any other information that accompanies or contains the sustainability information and our report.

### **Basis for conclusion**

We conducted our limited assurance engagement in accordance with International Standard on Assurance Engagements (ISAE) 3000 (Revised), *Assurance Engagements Other Than Audits or Reviews of Historical Financial Information*, issued by the International Auditing and Assurance Standards Board (IAASB), as adopted in Belgium.

Our responsibilities under this standard are further described in the "Responsibilities of the independent auditor for the limited assurance engagement on the sustainability information" section of our report.

We have complied with the ethical requirements that are relevant to our assurance engagement on the sustainability information in Belgium, including the independence requirements.

Our firm applies International Standard on Quality Management (ISQM) 1. This standard requires the firm to design, implement and operate a system of quality management, including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

We have obtained from the board of directors and the Company's officials the explanations and information necessary for our limited assurance engagement.

We believe that the assurance evidence we have obtained is sufficient and appropriate to provide a basis for our conclusion.

### **Other matter**

The scope of our procedures is limited to our limited assurance engagement on the sustainability information of the Group. Our limited assurance engagement does not extend to information relating to the comparative figures.

## **Interconnectivity between the sustainability information and the consolidated financial statements**

The board of directors is responsible for referencing the sustainability information to the amounts reported in the consolidated financial statements to ensure the interconnectivity between the sustainability information and the consolidated financial statements. Our conclusion included in the section "Limited assurance conclusion" does not extend to the interconnectivity between the sustainability information and the consolidated financial statements, and we do not express any assurance conclusion thereon. In the context of our limited assurance engagement, we are responsible, as contractually determined, to verify the referencing from the sustainability information to the amounts reported in the consolidated financial statements. In the context of the procedures carried out in this respect, we did not identify any material misstatements that we have to report to you.

## **Board of directors' responsibilities for the preparation of the sustainability information**

The board of directors of the Company is responsible for designing and implementing the Process and for disclosing this Process in section 'Description of the processes to identify and assess material impact, risks and opportunities (1.4.1)' of the sustainability information. This responsibility includes:

- understanding the context in which the Group's activities and business relationships take place and developing an understanding of its affected stakeholders;
- identifying the actual and potential impacts (both negative and positive) related to sustainability matters, as well as risks and opportunities that affect, or could reasonably be expected to affect, the Group's financial position, financial performance, cash flows, access to finance or cost of capital over the short-, medium-, or long-term;
- assessing the materiality of the identified impacts, risks and opportunities related to sustainability matters by selecting and applying appropriate thresholds; and
- making assumptions and estimates that are reasonable in the circumstances.

The board of directors of the Company is further responsible for the preparation of the sustainability information, which includes the information determined by the Process:

- in accordance with the requirements of article 3:32/2 of the Companies' and Associations' Code, including compliance with the applicable European standards for sustainability information (European Sustainability Reporting Standards (ESRS)); and

- in compliance with the requirements of Article 8 of EU Regulation 2020/852 (the "Taxonomy Regulation") regarding the publication of the information included the section EU-taxonomy – detailed tables of the Annual report KBC Group 2024.

This responsibility entails:

- designing, implementing and maintaining such internal controls that the board of directors determines are necessary to enable the preparation of the sustainability information such that it is free from material misstatement, whether due to fraud or error; and
- selecting and applying appropriate sustainability reporting methods and making assumptions and estimates that are reasonable in the circumstances.

The audit committee is responsible for overseeing the Company's sustainability information reporting process.

### **Inherent limitations in preparing the sustainability information**

In reporting forward-looking information in accordance with ESRS, the board of directors of the Company is required to prepare the forward-looking information on the basis of disclosed assumptions about events that may occur in the future and possible future actions by the Group. The actual outcome is likely to be different since anticipated events frequently do not occur as expected and the deviations may be material.

### **Responsibilities of the Independent auditor for the limited assurance engagement on the sustainability information**

It is our responsibility to plan and perform the assurance engagement to obtain limited assurance about whether the sustainability information is free from material misstatement, whether due to fraud or error, and to issue a limited assurance report that includes our conclusion. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence decisions of users taken on the basis of the sustainability information as a whole.

As part of a limited assurance engagement in accordance with ISAE 3000 (Revised), as adopted in Belgium, we exercise professional judgment and maintain professional skepticism throughout the engagement. The work carried out in an engagement with a view to obtaining a limited degree of assurance, for which we refer to the section "Summary of the work performed", is less in extent than for a reasonable assurance engagement. We therefore do not express a reasonable assurance conclusion.

As the forward-looking information contained in the sustainability information and the assumptions on which it is based, relate to the future, it may be affected by events that may occur and/or by possible actions of the Group. The actual outcome is likely to differ from the assumptions, as the anticipated events will frequently not occur as expected and the deviations may be material. Our conclusion is therefore not a guarantee that the actual outcomes reported will be consistent with those included in the forward-looking information included in the sustainability information.

Our responsibilities in relation to the Process for reporting the sustainability information, include:

- obtaining an understanding of the Process but not for the purpose of providing a conclusion on the effectiveness of the Process, including the outcome of the Process; and
- designing and performing procedures to evaluate whether the Process is consistent with the Group's description of its Process, as disclosed in section 'Description of the processes to identify and assess material impact, risks and opportunities (1.4.1)' of the sustainability information.

Our other responsibilities in respect of the sustainability information include:

- obtaining an understanding of the Group's control environment, relevant processes and information systems for the preparation of the sustainability information but not evaluating the design of particular control activities, obtaining evidence about their implementation or testing their operating effectiveness;
- identifying areas in the sustainability information where material misstatements are likely to arise, whether due to fraud or error; and
- designing and performing procedures focused on disclosures in the sustainability information where material misstatements are likely to arise. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

## **Summary of the work performed**

A limited assurance engagement involves performing procedures to obtain assurance evidence about the sustainability information. The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

The nature, timing and extent of our procedures depend on our professional judgment, including the identification of disclosures where material misstatements are likely to arise, whether due to fraud or error, in the sustainability information.

In conducting our limited assurance engagement with respect to the Process, we have:

- obtained an understanding of the Process by:
  - performing inquiries to understand the sources of the information used by management (e.g., stakeholder engagement, business plans and strategy documents); and
  - reviewing the Group's internal documentation of its Process; and
- evaluated whether the assurance evidence obtained from our procedures about the Process implemented by the Group was consistent with the description of the Process set out in section 'Description of the processes to identify and assess material impact, risks and opportunities (1.4.1)' of the sustainability information.

In conducting our limited assurance engagement with respect to the sustainability information, we have amongst others:

- obtained an understanding of the Group's reporting processes relevant to the preparation of its sustainability information by, through the performance of inquiries, obtaining an understanding of the Group's control environment, relevant processes and information systems for the preparation of the sustainability information;
- evaluated whether material information identified by the Process is included in the sustainability information;
- evaluated whether the structure and the presentation of the sustainability information is in accordance with the ESRS;
- performed inquiries of relevant personnel and analytical procedures on selected disclosures in the sustainability information;

- performed substantive assurance procedures based on the basis of a limited sample on selected disclosures in the sustainability information;
- obtained assurance evidence on the methods for developing material estimates and forward-looking information as further described in the "Responsibilities of the Independent auditor for the limited assurance engagement on the sustainability information" section of our report;
- obtained an understanding of the process of the Group to identify taxonomy-eligible and taxonomy-aligned economic activities and the corresponding disclosures in the sustainability information.

### **Information about the independence**

Our audit firm and our network have not performed any engagement which is incompatible with the limited assurance engagement and our audit firm remained independent of the Group during the term of our mandate.

- We have dealt with the main items in the income statement in the 'Report of the Board of Directors' under the 'Our financial report' and 'Our business units' sections. The statutory auditor has not audited these sections.
- Since 2024, 'Net result from financial instruments at fair value through profit or loss' and 'Insurance finance income and expense (for insurance contracts issued)' are shown on the same line, with retroactive restatement of the 2023 figures (see Note 3.3 for more details).
- The breakdown of interest income and interest expense on financial instruments calculated using the effective interest rate method and on other financial instruments (not calculated using the effective interest rate method) is provided in Note 3.1.
- For a breakdown of the operating expenses by nature, see Note 3.7.
- The impact of the most important acquisitions and disposals made in 2024 and 2023 is set out in Note 6.6.

attributable to minority interests	-1	-1
attributable to equity holders of the parent	3 292	3 897

- Revaluation reserves in 2024:
  - The net change in the 'revaluation reserve (FVOCI debt instruments)' came to -88 million euros, which was mainly accounted for by the higher interest rates of primarily government bonds in most countries, partly offset by the unwinding effect of the negative outstanding revaluation reserve.
  - The net change in the hedging reserve (cashflow hedge) of +72 million euros was mainly attributable to the unwinding effect of the negative outstanding hedging reserve.
  - The net change in translation differences of -227 million euros was caused primarily by the depreciation of the Czech koruna and the Hungarian forint against the euro. This was partly offset by the hedge of net investments in foreign entities (+42 million euros). The hedging policy of foreign exchange participations is aimed at stabilising the group capital ratio (and not the equity).
  - The net change in insurance finance income and expense for (re)insurance contracts issued and held (-166 million euros) was mainly accounted for by a transfer of Belgian individual pension agreements from the 'Risk and Savings' portfolio to the 'Hybrid products' portfolio (see Note 5.6), the decrease in the risk-free rate in euro and the unwinding effect of the outstanding positive insurance finance income and expense through OCI.
  - The net change in the 'revaluation reserve (FVOCI equity instruments)' came to +178 million euros, which was largely attributable to positive changes in fair value driven by higher stock markets.
  - The net change in defined benefit plans (+69 million euros) was mainly accounted for by the impact of lower inflation and the positive return on plan assets, partly offset by a slightly lower discount rate applied to the liabilities.
- Revaluation reserves in 2023:
  - The net change in the 'revaluation reserve (FVOCI debt instruments)' came to +499 million euros, which was mainly accounted for by the lower interest rates and the unwinding effect of the negative outstanding revaluation reserve.
  - The net change in the hedging reserve (cashflow hedge) of +358 million euros was mainly attributable to the unwinding effect of the negative outstanding hedging reserve and positive mark-to-market on receiver swaps due to lower interest rates.
  - The net change in translation differences of -115 million euros was caused primarily by the depreciation of the Czech koruna against the euro, partly offset by the appreciation of the Hungarian forint against the euro. This was partly offset by the hedge of net investments in foreign entities (+52 million euros). The hedging policy of foreign exchange participations is aimed at stabilising the group capital ratio (and not the equity).
  - The net change in insurance finance income and expense for (re)insurance contracts issued and held (-422 million euros) was mainly accounted for by the lower interest rates and the unwinding effect of the outstanding positive insurance finance income and expense through OCI.
  - The net change in the 'revaluation reserve (FVOCI equity instruments)' came to +159 million euros, which was largely attributable to positive changes in fair value driven by higher stock markets.
  - The net change in defined benefit plans of -34 million euros was accounted for by the impact of the lower discount rate applied to the liabilities, partly offset by the lower expected inflation rate and the positive returns on plan assets.

Revaluation reserve (FVOCI debt instruments)	-684	-596
Revaluation reserve (FVOCI equity instruments)	353	222
Hedging reserve (cashflow hedges)	-507	-579
Translation differences	-468	-240
Hedge of net investments in foreign operations	169	127
Remeasurement of defined benefit plans	503	434
Own credit risk through equity	0	0
Insurance finance income and expense after reinsurance	1 633	1 799

- An explanation of the changes in the revaluation reserves is provided under 'Consolidated statement of comprehensive income'.
- For information on the shareholder structure, see the 'Report of the Board of Directors' in the 'Corporate governance statement' section.
- 'Restatement related to previous years' involves an adjustment of the tax calculation in the Czech Republic. Given the relatively limited impact, the balance sheet and income statement were not retroactively restated.
- For information on capital increases, additional tier-1 instruments, treasury share buybacks and the number of shares, see Note 5.10.
- The 'Dividends' item in 2024 (1.9 billion euros) includes the final dividend of 3.15 euros per share and the exceptional interim dividend of 0.70 euros per share (both paid in May 2024) and the interim dividend of 1.00 euro per share (paid in November 2024). The 'Dividends' item in 2023 (1.7 billion euros) includes the final dividend of 3.00 euros per share (paid in May 2023) and the interim dividend of 1.00 euro per share (paid in November 2023).
- We propose to the General Meeting of Shareholders of 30 April 2025 a total dividend of 4.85 euros per share entitled to dividend related to 2024. That amount includes 0.70 euros per share already paid in May 2024, reflecting the surplus capital exceeding the 15% fully loaded CET1 capital threshold at year-end 2023, and 4.15 euros per share, comprising an interim dividend of 1 euro per share, which was already paid in November 2024, and the remaining 3.15 euros per share, payable in May 2025. Note that shares repurchased under the share buyback programme completed in 2024 are excluded from the calculation of the number of shares entitled to dividend (see also 'Abridged company annual accounts' elsewhere in this annual report).

Deposits from banks repayable on demand	4.1	-6 456	-6 136
Cash and cash equivalents belonging to disposal groups	–	0	0
Total	–	61 407	53 961
of which not available	–	0	0

1 The notes referred to do not always contain the exact same amounts as those included in the cashflow statement, as – among other things – adjustments have been made to take account of acquisitions or disposals of subsidiaries, as set out in IAS 7.

2 'Interest paid' and 'Interest received' in this overview are the equivalent of the 'Interest expense' and 'Interest income' items in the consolidated income statement. Given the large number of underlying contracts that generate interest expense and interest income, it would take an exceptional administrative effort to establish actual cashflows. Moreover, it is reasonable to assume that actual cashflows for a bank-insurance company do not differ much from the accrued interest expense and accrued interest income, as most rate products pay interest regularly within the year.

- KBC uses the indirect method to report on cashflows from operating activities.
- Net cash from or used in operating activities:
  - In 2024, this item included growth in customer deposits (related in part to the recovery of the outflow to the Belgian State Note in 2023) and a strong increase in repos, partly offset by a decrease in deposits from credit institutions (including the repayment of the remaining 2.6 billion euros borrowed under TLTRO III) and certificates of deposit as well as an increase in loans and advances to customers and debt instruments;
  - In 2023, this item included a repayment of part of the amount borrowed under TLTRO III (12.9 billion euros), lower demand deposits and savings deposits (partly due to the outflow to the Belgian State Note in September 2023), lower repos and higher mortgage loans and term loans, partly offset by growth in certificates of deposit and time deposits.
- Net cash from or used in investing activities:
  - In 2024, this item included additional net investments in tangible and intangible fixed assets (-1 160 million euros), partly offset by a decrease in debt securities at amortised cost (+1 080 million euros);
  - In 2023, this item included the cash proceeds from the finalisation of the sale in Ireland, partly offset by additional investments in debt securities at amortised cost.
- Net cash from or used in financing activities:
  - In 2024, this item included the dividend payout (-1.9 billion euros), treasury share buybacks (-0.8 billion euros) and the issue or repayment of promissory notes and other debt securities (+1.3 billion euros; KBC IFIMA, KBC Group NV and KBC Bank NV accounted for the bulk of the figure for 2024, which related primarily to 3.4 billion euros' worth of these instruments being issued and 2.4 billion euros being redeemed). Furthermore, net cash related to financing activities was impacted by the issue of subordinated liabilities (+0.2 billion euros, with 1.5 billion euros' worth of these instruments being issued and 1.4 billion euros being redeemed; KBC Group NV accounted for the bulk of the figure), and AT1 (with +0.75 billion euros' worth of these instruments being issued and 1.14 billion euros being redeemed);
  - In 2023, this item included the dividend payout (-1.7 billion euros), treasury share buybacks (-0.5 billion euros) and the issue or repayment of promissory notes and other debt securities (+6.0 billion euros). KBC IFIMA, KBC Group NV, ČSOB in the Czech Republic and KBC Bank NV accounted for the bulk of the figure for 2023, which related primarily to 8.6 billion euros' worth of these instruments being issued and 2.7 billion euros being redeemed. This item also included the issue or repayment of subordinated liabilities (+0.5 billion euros; KBC Group NV accounted for the bulk of the figure) and the issue of a new additional tier-1 instrument (+0.75 billion euros).

## 1.0 Notes on the accounting policies

### Note 1.1: Statement of compliance

The consolidated financial statements of KBC Group NV, including all the notes, were authorised for issue on 13 March 2025 by the Board of Directors. They have been prepared in accordance with the IFRS Accounting Standards as adopted by the European Union ('endorsed IFRS') and present one year of comparative information. All amounts are shown in millions of euros and rounded to the million (unless otherwise stated).

The following standards became effective on 1 January 2024:

- The IASB has published several limited amendments to existing IFRSs, the impact of which is negligible for KBC.

The following IFRS standards were issued but not yet effective in 2024. KBC will apply these standards when they become mandatory.

- IFRS 18 (Presentation and Disclosure in Financial Statements), applicable from 2027, with limited impact on the presentation and disclosures;
- IFRS 19 (Subsidiaries without public accountability), with no impact expected;
- The IASB has published several limited amendments to existing IFRSs and IFRICs. They will be applied when they become mandatory, but their impact is currently estimated to be negligible.

As of 1 January 2024, we have revised our multi-tier approach for the assessment of a significant increase in credit risk. The indicators based on a 12-month probability of default ('Internal rating' and 'Internal rating backstop') were replaced by an assessment based on lifetime probability of default (LTPD) and a watch list indicator. KBC applied the revised approach for the first time in the first quarter of 2024. This resulted in an ECL release of 17 million euros, recognised in 'Impairment on financial assets at AC and at FVOCI'. See also under 'Significant increase in credit risk since initial recognition' in Note 1.2.

Presentation of the income statement: since 2024, we present 'Net result from financial instruments at fair value through profit or loss' and 'Insurance finance income and expense (for insurance contracts issued)' on the same line, with retroactive restatement of the 2023 figures (also see Note 3.3).

The loan portfolio accounts for the largest share of the financial assets. Based on internal management reports, the composition and quality of the loan portfolio is set out in detail in the 'How do we manage our risks?' section (under 'Credit risk'). All parts of that particular section which have been audited by the statutory auditor are specified in that section.

As a bank-insurance group, KBC presents banking and insurance information in its financial statements on an integrated basis. Information relating specifically to our banking business and to our insurance business is provided separately in the respective annual reports of KBC Bank and KBC Insurance under 'Information on KBC Bank' and 'Information on KBC Insurance' at [www.kbc.com](http://www.kbc.com) > Investor Relations.

## Note 1.2: Summary of material accounting policies

### General / Basic principle

The general accounting principles of KBC Group NV ('KBC') are based on the IFRS Accounting Standards, as adopted by the European Union, and on the IFRS Framework. The financial statements of KBC are prepared based on the going concern assumption. KBC presents each material class of similar items separately. Dissimilar items are presented separately unless they are immaterial, and items are only offset when explicitly required or permitted by the relevant IFRS.

### Financial assets

KBC has applied all the requirements of IFRS 9 since 1 January 2018, except for hedge accounting transactions, which continue to be accounted for in accordance with IAS 39.

#### Financial assets – recognition and derecognition

**Recognition:** financial assets and liabilities are recognised in the balance sheet when KBC becomes party to the contractual provisions of the instruments. Regular-way purchases or sales of financial assets are recognised using settlement date accounting. All financial assets – except those measured at fair value through profit or loss – are measured initially at fair value plus transaction costs directly attributable to their acquisition.

**Derecognition and modification:** KBC derecognises a financial asset when the contractual cashflows from the asset expire or when KBC transfers its rights to receive contractual cashflows from the financial asset in a transaction in which substantially all the risks and rewards of ownership are transferred. If the terms and conditions change during the term of a financial asset, KBC assesses whether the new terms are substantially different from the original ones and whether the changes indicate that the rights to the cashflows from the instrument have expired. If it is concluded that the terms are substantially different, the transaction is accounted for as a financial asset derecognition, which means that the existing financial asset is removed from the balance sheet and that a new financial asset is recognised based on the revised terms. Conversely, when KBC assesses that the terms are not substantially different, the transaction is accounted for as a financial asset modification.

**Write-offs:** KBC writes off the gross carrying value of financial assets (or the part of the gross carrying value) it deems uncollectable. This means that there is no reasonable expectation that KBC will recover any interest or principal in a timely manner. The timing of write-offs depends on several factors, including the portfolio, the existence and type of collateral, the settlement process in each jurisdiction, and local legislation. If a loan is uncollectable, the gross carrying value is written off directly against the corresponding impairment. Recoveries of amounts previously written off are recognised as reversals of impairments in the income statement. KBC differentiates between write-offs for financial reporting purposes (which are still subject to credit enforcement activities) and debt forgiveness. The latter entails the forfeiture of the legal right to recover all or part of the debt outstanding to the client.

#### Classification of debt instruments and equity instruments

On initial recognition of a financial asset, KBC first assesses the contractual terms of the instrument in order to classify it as an equity instrument or a debt instrument. An equity instrument is defined as any contract that evidences a residual interest in another entity's net assets. To satisfy this condition, KBC checks that the instrument does not include a contractual obligation requiring the issuer to deliver cash or exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the issuer. Any instruments that do not meet the criteria to qualify as equity instruments are classified as debt instruments by KBC, with the exception of derivatives.

## Classification and measurement – debt instruments

If KBC concludes that a financial asset is a debt instrument, then – upon initial recognition – it can be classified in one of the following categories:

- Measured at fair value through profit or loss (FVPL);
  - Mandatorily measured at fair value through profit or loss (MFVPL) – this category includes held-for-trading instruments (HFT);
    - Designated upon initial recognition at fair value through profit or loss (FVO);
- Measured at fair value through other comprehensive income (FVOCI);
- Measured at amortised cost (AC).

Debt instruments have to be classified in the FVPL category where (i) they are not held within a business model whose objective is to hold assets in order to collect contractual cashflows or within a business model whose objective is achieved by both collecting contractual cashflows and selling financial assets or, alternatively, (ii) they are held within a business model but, on specified dates, the contractual terms of the instrument give rise to cashflows that are not solely payments of principal and interest on the principal amount outstanding.

Furthermore, KBC may in some cases – on initial recognition – irrevocably designate a financial asset that otherwise meets the requirements to be measured at AC or at FVOCI as at fair value (FVO) if doing so eliminates or significantly reduces an accounting mismatch that would otherwise arise.

A debt instrument is measured at FVOCI only if it meets both of the following conditions and is not designated to be measured at FVO:

- The asset is held within a business model whose objective is achieved by both collecting contractual cashflows and selling financial assets;
- The contractual terms of the financial asset give rise on specified dates to cashflows that are solely payments of principal and interest on the principal amount outstanding.

A debt instrument is measured at AC only if it meets both of the following conditions and is not designated to be measured at FVO:

- The asset is held within a business model whose objective is to hold assets in order to collect contractual cashflows;
- The contractual terms of the financial asset give rise on specified dates to cashflows that are solely payments of principal and interest on the principal amount outstanding.

## Business model assessment

The business model is assessed to determine whether debt instruments should be measured at AC or FVOCI. In performing the assessment, KBC reviews at portfolio level the objective of the business model in which an asset is held because this best reflects how the business is managed and how information is provided to management. The information considered includes:

- the stated policies and objectives for the portfolio and how those policies operate in practice (in particular, whether management's strategy focuses on earning contractual interest income, maintaining a specific interest rate profile, matching the duration of the financial assets to that of the liabilities that fund those assets, or realising cashflows through the sale of the assets);
- how the performance of the portfolio is evaluated and reported to KBC's Executive Committee and Board of Directors;
- the risks that affect the performance of the business model (and the financial assets held within that model) and how those risks are managed;
- how managers of the business are rewarded (for instance, whether remuneration is based on the fair value of the assets managed or the contractual cashflows collected); and
- the frequency, volume and timing of sales in prior periods, the reasons for such sales and KBC's expectations of future sales activity. However, information about sales activity is not considered in isolation, but as part of an overall assessment of how KBC's stated objective for managing the financial assets is achieved and how cashflows are realised.

Financial assets that are held for trading or whose performance is evaluated on a fair value basis are measured at FVPL, because they are neither held for collecting contractual cashflows, nor held for both collecting contractual cashflows and selling financial assets.

## Assessment whether contractual cashflows are solely payments of principal and interest (SPPI)

For the purposes of this assessment, 'principal' is defined as the fair value of the financial asset on initial recognition. 'Interest' is defined as consideration for the time value of money and for the credit risk associated with the principal amount outstanding during a particular period of time and for other basic lending risks and costs (e.g., liquidity risk and administrative costs), as well as profit margin. In assessing whether contractual cashflows are solely payments of principal and interest, KBC considers the contractual terms of the instrument, which entails assessing whether the financial asset contains a contractual term that could change the timing or amount of contractual cashflows such that the instrument would not meet this condition.

In making the assessment, KBC considers:

- contingent events that could change the amount and timing of cashflows;
- leverage features;
- prepayment and extension terms;
- terms that limit KBC's claim to cashflows from specified assets (e.g., non-recourse asset arrangements); and
- features that modify consideration of the time value of money (e.g., periodic resets of interest rates).

## Reclassifications

Financial assets are not reclassified subsequent to their initial recognition except in a period after KBC changes its business model for managing financial assets, which can occur when KBC begins or ceases to perform an activity that is significant to its operations (e.g., when KBC acquires, disposes of, or terminates a business line). Reclassification takes place from the start of the reporting period immediately following the change.

## Classification and measurement – equity instruments

Financial equity instruments are classified in one of the following categories:

- Mandatorily measured at fair value through profit or loss (MFVPL) – only includes equity instruments held for trading (HFT);
- Equity instruments elected to be measured at fair value through other comprehensive income (FVOCI).

There is a rebuttable presumption that all equity instruments are to be regarded as FVOCI if held for neither trading nor a contingent consideration in a business combination to which IFRS 3 applies. The election to include equity instruments in the FVOCI category is irrevocable on initial recognition and can be done on an investment-by-investment basis, which is interpreted by KBC as a share-by-share basis. Equity instruments categorised as FVOCI are subsequently measured at fair value, with all value changes recognised in other comprehensive income and without any recycling to the income statement, even when the investment is disposed of. The only exception applies to dividend income, which is recognised in the income statement under 'Dividend income'.

## Classification and measurement – derivatives (trading and hedging)

KBC can recognise derivative instruments either for trading purposes or as hedging derivatives. They can be accounted for as assets or liabilities depending on their current market value.

### *Trading derivatives*

Derivatives are always measured at fair value and KBC draws distinctions as follows:

- Derivatives that are held with the intent of hedging, but for which hedge accounting cannot be or is not applied (economic hedges): hedging instruments can be acquired with the intention of economically hedging an external exposure but without applying hedge accounting. The interest component of these derivatives is recognised under 'Net interest income', while all other fair value changes are recognised under 'Net result from financial instruments at fair value through profit or loss'.
- Derivatives held with no intent of hedging (trading derivatives): KBC entities can also contract derivatives without any intention to hedge a position economically. Such activity can relate to closing or selling an external position in the near term or for short-term profit-taking purposes. All fair value changes (including interest) on such derivatives are recognised under 'Net result from financial instruments at fair value through profit or loss'.

### *Hedging derivatives*

Hedging derivatives are derivatives that are specifically designated in a hedging relationship. The process for accounting for such derivatives is detailed in 'Hedge accounting'.

## Financial assets – impairment

### Definition of default

KBC defines defaulted financial assets in the same way as the definition for internal risk management purposes and in line with the guidance and standards of financial industry regulators. A financial asset is considered in default if any of the following conditions is fulfilled:

- There is a significant deterioration in creditworthiness;
- The asset is flagged as non-accrual;
- The asset is forborne and meets the default criteria in accordance with the internal policies for forbearance (for example, when an additional forbearance measure is extended to a forborne asset that did not reach default status within two years of the first forbearance measure being granted, or when a forborne asset becomes more than 30 days past due within the two-year period);
- KBC has filed for the borrower's bankruptcy;
- The counterparty has filed for bankruptcy or sought similar protection measures;
- The credit facility granted to the client has been terminated.

KBC applies a backstop for facilities whose status is '90 days or more past due'. In this context, a backstop is used as a final control to ensure that all the assets that should have been designated as defaulted are properly identified.

### Expected credit loss model (ECL model) – general

The ECL model is used to measure impairment of financial assets.

The scope of the ECL model is based on how financial assets are classified. The model is applicable to the following financial assets:

- Financial assets measured at AC and at FVOCI;
- Loan commitments and financial guarantees;
- Finance lease receivables;
- Trade and other receivables.

No ECLs are calculated for investments in equity instruments.

Financial assets that are in scope of the ECL model carry impairment in an amount equal to the lifetime ECL if the credit risk increases significantly after initial recognition. Otherwise, the loss allowance is equal to the 12-month ECL (see below for more information on the significant increase in credit risk).

To distinguish the various stages with regard to quantifying ECL, KBC uses the internationally accepted terminology for 'Stage 1', 'Stage 2' and 'Stage 3' financial assets. Unless they are already credit impaired, all financial assets are classified in 'Stage 1' at the time of initial recognition and 12-month ECL is recognised. Once a significant increase in credit risk occurs after initial recognition, the asset is moved into 'Stage 2' and lifetime ECL is recognised. Once an asset meets the definition of default, it is moved into 'Stage 3'.

For trade receivables, IFRS 9 allows for a practical expedient. The ECL for trade receivables can be measured in an amount equal to their lifetime ECL. KBC applies this practical expedient to trade and other receivables.

Impairment gains and losses on financial assets are recognised under the 'Impairment' heading in the income statement.

Financial assets that are measured at AC are presented in the balance sheet at their net carrying value, which is the gross carrying value less impairment. Debt instruments measured at FVOCI are presented in the balance sheet at their carrying value, which is their fair value on the reporting date. The adjustment for the ECL is recognised as a reclassification adjustment between the income statement and OCI.

## Significant increase in credit risk since initial recognition

In accordance with the ECL model, financial assets attract lifetime ECL once their credit risk increases significantly after initial recognition. Therefore, the assessment of a significant increase in credit risk is important for the staging of financial assets. The assessment of a significant increase in credit risk is a relative assessment based on the credit risk that was assigned upon initial recognition. This is a multi-factor assessment and, therefore, KBC has developed a multi-tier approach for both the bond portfolio and the loan portfolio.

### *Multi-tier approach (MTA) – bond portfolio*

For the bond portfolio, the MTA consists of three tiers:

- Low-credit exception: 12-month ECL is always recognised for bonds if they have a low credit risk on the reporting date (i.e. 'Stage 1'). KBC uses this exception for investment grade bonds.
- Lifetime probability of default (LTPD) (only applicable if the first-tier criterion is not met): this is a relative assessment that compares the lifetime probability of default (LTPD) upon initial recognition to that on the reporting date. The relative change in LTPD that triggers staging is an increase of 200%.
- Management assessment: lastly, management review and assess the significant increase in credit risk for financial assets at an individual (i.e. counterparty) and portfolio level, when it is concluded that idiosyncratic events are not adequately captured in the first two tiers of the MTA. Examples of idiosyncratic events are unexpected developments in the macroeconomic environment (for example, the coronavirus crisis), uncertainties about geopolitical events (such as a war) and the secondary impact of material defaults (e.g., on the suppliers, clients and employees of a defaulted company).

If none of these triggers results in a move into 'Stage 2', the bond remains in 'Stage 1'. A financial asset is considered as 'Stage 3' as soon as it meets the definition of default. The MTA is symmetrical, i.e. bonds that have been moved into 'Stage 2' or 'Stage 3' can revert to 'Stage 1' or 'Stage 2' if the tier criterion that triggered the migration is not met on a subsequent reporting date.

### *Loan portfolio*

For the loan portfolio, KBC uses a five-tier approach. This MTA is a waterfall approach (i.e. if assessing the first tier does not result in a move into 'Stage 2', the second tier is assessed, and so on). In the end, if all tiers are assessed without triggering a migration to 'Stage 2', the credit remains in 'Stage 1'.

- Lifetime probability of default (LTPD): the LTPD is used as the main criterion for assessing an increase in credit risk. It is a relative assessment that compares the lifetime probability of default (LTPD) upon initial recognition to that on the reporting date. KBC does the assessment at facility level for each reporting period. The relative change in LTPD that triggers staging is an increase of 200%.
- Forbearance: forborne financial assets are always considered as 'Stage 2' unless they are already defaulted, in which case they are moved into 'Stage 3'.
- Days past due: KBC uses the backstop defined in the standard. A financial asset that is more than 30 days past due is moved into 'Stage 2'.
- Watch list: KBC uses the watch list criterion as a backstop for its loan portfolio to move into 'Stage 2'. The watch list includes credit with an increased credit risk but which is not (yet) classified as default/non-performing and which is subject to enhanced monitoring and review by the bank. KBC does this assessment at client level for each reporting period.
- Management assessment: lastly, management review and assess the significant increase in credit risk for financial assets at an individual (i.e. counterparty) and portfolio level, when it is concluded that idiosyncratic events are not adequately captured in the first four tiers of the MTA (see above for a number of examples).

A financial asset in scope of the ECL model is considered as 'Stage 3' as soon as it meets the definition of default. The MTA is symmetrical, i.e. credit that has been moved into 'Stage 2' or 'Stage 3' can revert to 'Stage 1' or 'Stage 2' if the tier criterion that triggered the migration is not met on a subsequent reporting date.

## Measurement of ECL

ECL is calculated as the product of probability of default (PD), estimated exposure at default (EAD) and loss given default (LGD).

ECL is calculated to reflect:

- an unbiased, probability-weighted amount;
- the time value of money; and
- information about past events, current conditions and forecast economic conditions.

Lifetime ECL represents the sum of ECL over the lifetime of the financial asset discounted at the original effective interest rate.

The 12-month ECL represents the portion of lifetime ECL resulting from a default in the 12-month period after the reporting date.

KBC uses specific IFRS 9 models for PD, EAD and LGD in order to calculate ECL. As much as possible and to promote efficiency, KBC uses modelling techniques similar to those developed for prudential purposes (i.e. Basel models). More information on the credit risk models developed by KBC is provided in the 'Internal Modelling' section of the Risk Report at [www.kbc.com](http://www.kbc.com). That said, KBC ensures that the Basel models are adapted so they comply with IFRS 9:

- KBC removes the conservatism that is required by the regulator for Basel models;
- KBC adjusts how macroeconomic parameters affect the outcome to ensure that the IFRS 9 models reflect a 'point-in-time' estimate rather than one that is 'through the cycle' (as required by the regulator);
- KBC applies forward-looking macroeconomic information in the models.

As regards loans that are in default, the ECL is also calculated as the product of the PD, EAD and LGD. In this specific case, however, the PD is set at 100%, the EAD is known given the default status and the LGD takes into account the net present value of the (un)recoverable amount.

KBC uses the IRB and Standardised models to assign the Basel PD, which then serves as input for IFRS 9 ECL calculations and staging. If there is no Basel PD model with a similar scope to the IFRS 9 model, the long-term observed default rate is used as the PD for all facilities in the portfolio. For low default portfolios, there may have been no or only a small number of defaults in the period being considered, in which case the PD is determined based on expert input and external ratings.

KBC considers forward-looking information in the calculation of ECL via macroeconomic variables and based on management's assessment of any idiosyncratic events. KBC's Chief Economist develops three different macroeconomic scenarios (base-case, up and down) for all the KBC Core Countries and sets a corresponding probability for each scenario. On a quarterly basis, KBC updates the economic scenarios and attributed weightings to be used for the ECL calculation based on the input of the Chief Economist. The incorporation of the macroeconomic variables included in these scenarios in the PD, EAD and LGD components of the ECL calculation is based on statistical correlation in historical datasets.

The maximum period for measurement of ECL is the maximum contractual period (including extensions), except for specific financial assets that include a drawn and an undrawn amount available on demand, and KBC's contractual ability to request repayment of the drawn amount and cancel the undrawn commitment does not limit the exposure to credit risk to the contractual period. Only for such assets can a measurement period extend beyond the contractual period.

## Purchased or originated credit impaired (POCI) assets

KBC defines POCI assets as financial assets in scope of the IFRS 9 impairment standard that are already defaulted at origination (i.e. they then meet the definition of default). POCI assets are initially recognised at an amount net of impairment and are measured at amortised cost using a credit-adjusted effective interest rate. In subsequent periods, any changes to the lifetime ECL are recognised in the income statement. Favourable changes are recognised as an impairment gain, even if the lifetime ECL on the reporting date is lower than the lifetime ECL at origination.

## Significant judgements and uncertainties

Calculating ECL (and the significant increase in credit risk since initial recognition) requires significant judgement of various aspects, including the borrowers' financial position and repayment capabilities, the value and recoverability of collateral, projections and macroeconomic information. KBC applies a neutral, bias-free approach when dealing with uncertainties and making decisions based on significant judgements.

### [Cash, cash balances with central banks and other demand deposits with credit institutions](#)

Cash comprises cash on hand and demand deposits, e.g., cheques, petty cash and cash balances at central and other banks.

## Financial liabilities

Financial instruments or their component parts are classified on initial recognition as liabilities or as equity in accordance with the substance of the contractual arrangements and the definitions of financial liabilities and equity instruments. A financial instrument is classified as a liability if:

- KBC has a contractual obligation to deliver cash or another financial asset to the holder or to exchange another financial instrument with the holder under conditions that are potentially unfavourable to KBC; or
- KBC has a contractual obligation to settle the financial instrument in a variable number of its own shares.

A financial instrument is classified as an equity instrument if neither condition is met. In that case, it is accounted for in the way set out under 'Equity'.

### Financial liabilities – recognition and derecognition

KBC recognises a financial liability when it becomes party to the contractual provisions of the relevant instrument. This is typically the date when the consideration in the form of cash or some other financial asset is received. Upon initial recognition, the financial liability is recognised at fair value less transaction costs directly attributable to issuance of the instrument, except for financial liabilities at fair value through profit or loss.

Financial liabilities are derecognised when they are extinguished, i.e. the obligation specified in the contract is discharged or cancelled, or it expires. KBC can also derecognise the financial liability and recognise a new one where an exchange takes place between KBC and the lenders of the financial liability, each with substantially different terms, or if there are substantial modifications to the terms of the existing financial liabilities. In assessing whether terms differ, KBC compares the discounted present value of cashflows under the new terms, including any fees paid net of any fees received and discounted using the original effective interest rate, and the discounted present value of the remaining cashflows of the original financial liability. If the difference is 10% or more, KBC derecognises the original financial liability and recognises a new one. Where the exchange of debt instruments or modification of terms is accounted for as an extinguishment, any costs or fees incurred are recognised as part of the gain or loss on the extinguishment.

### Financial liabilities – classification and measurement

KBC classifies recognised financial liabilities in three different categories, as provided for by IFRS 9:

- Financial liabilities held for trading (HFT). Held-for-trading liabilities are those incurred principally for generating a profit from short-term fluctuations in price or dealer's margin. A liability also qualifies as a trading liability if it belongs to a portfolio of financial instruments held for trading separately by the trading desk and for which there is a recent pattern of short-term profit-taking. Held-for-trading liabilities can include derivatives, short positions in debt and equity instruments, time deposits and debt certificates. Derivative liabilities are split by KBC into trading and hedging derivatives as in the case of derivative assets. Initially, held-for-trading liabilities are measured at fair value. At the end of the reporting period, derivative liabilities are measured at fair value. Fair value adjustments are always recorded in the income statement.

- Financial liabilities designated by the entity as liabilities at fair value through profit or loss upon initial recognition (FVO). Under IFRS 9, a financial liability or group of financial liabilities can be measured upon initial recognition at fair value, whereby fair value changes are recognised in the income statement except for fair value changes related to changes in own credit risk, which are presented separately in OCI. The fair value designation is used by KBC for the following reasons:
  - managed on an FV basis: KBC designates a financial liability or a group of financial liabilities at fair value where it is managed and its performance is evaluated on a fair value basis. It is used to account for (unbundled) deposit components (i.e. financial liabilities that do not include a discretionary participation feature);
  - Accounting mismatch: the fair value option can be used when doing so eliminates or significantly reduces a measurement or recognition inconsistency that would otherwise arise from measuring assets or liabilities or recognising gains and losses on them on different bases;
  - Hybrid instruments: a financial instrument is regarded as hybrid when it contains one or more embedded derivatives that are not closely related to the host contract. The fair value option can be used when it is not possible to separate the non-closely-related embedded derivative from the host contract, in which case the entire hybrid instrument can be designated at fair value. This means that both the embedded derivative and the host contract are measured at fair value. KBC uses this option when structured products contain non-closely-related embedded derivatives, in which case both the host contract and the embedded derivative is measured at fair value.
- Financial liabilities measured at amortised cost (AC). KBC classifies most of its financial liabilities under this category, including those used to fund trading activities where no trading intent is present in them (e.g., issued bonds). These financial liabilities are initially measured at cost, which is the fair value of the consideration received including transaction costs. Subsequently, they are measured at amortised cost, which is the amount at which the funding liability was initially recognised minus principal repayments, plus or minus the cumulative amortisation of any difference between that initial amount and the maturity amount. The difference between the amount made available and the nominal value is recorded on an accruals basis as an interest expense. Interest expenses accrued but not yet paid are recorded under accruals and deferrals.

#### Financial liabilities – own credit risk

For financial liabilities designated at fair value, IFRS 9 requires the financial liability to be measured at fair value upon initial recognition. Any changes in fair value are subsequently recognised in the income statement, except for changes in own credit risk, which are presented separately in OCI.

Accordingly, movements in the fair value of the liability are presented in different places: changes in own credit risk are presented in OCI and all other fair value changes are presented in the income statement under 'Net result from financial instruments at fair value through profit or loss'. Amounts recognised in OCI relating to own credit risk are not recycled to the income statement even if the liability is derecognised and the amounts are realised. Although recycling is prohibited, KBC does transfer the amounts in OCI to retained earnings within equity upon derecognition. The only situation in which presentation of own credit risk in OCI is not applied is where this would create an accounting mismatch in the income statement. This could arise if there is a close economic relationship between the financial liability designated at fair value (for which the own credit risk is recognised in OCI), while all changes in fair value of the corresponding financial asset are measured and recognised at fair value through profit or loss. This is the case with unit-linked investment contracts, where changes in fair value of the liability position are fully offset by the asset position.

#### Financial liabilities – financial guarantee contract

A financial guarantee contract is one that requires KBC to make specified payments to reimburse holders for losses they incur because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument. A financial guarantee contract is initially recognised at fair value and is subsequently measured at the higher of (a) the amount determined in accordance with the impairment provisions of IFRS 9 (see 'Financial assets – impairment') and (b) the amount initially recognised less, when appropriate, cumulative amortisation recognised in accordance with the revenue recognition principle of IFRS 15.

#### Reverse repos and repos

A reverse repo is a transaction in which KBC purchases a financial asset and simultaneously enters into an agreement to sell the asset (or a similar asset) at a fixed price on a future date; this agreement is accounted for as a loan or advance, and the underlying asset is not recognised in the financial statements.

In a repo transaction, KBC sells a security and simultaneously agrees to repurchase it (or a substantially similar asset) at a fixed price on a future date. KBC continues to recognise the securities in their entirety because it retains substantially all of the risks and rewards of ownership. The cash consideration received is recognised as a financial asset and the financial liability is recognised as the obligation to pay the repurchase price.

#### Offsetting

KBC offsets and presents only a net amount of a financial asset and financial liability in its balance sheet if and only if (i) it currently has a legally enforceable right to set off the recognised amounts and (ii) it intends either to settle on a net basis or to realise the asset and settle the liability simultaneously.

## Fair value

KBC defines 'fair value' as 'the price that would be received for sale of an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date'. Fair value is not the amount that an entity would receive or pay in a forced transaction, involuntary liquidation or distress sale. An imbalance between supply and demand (e.g., fewer buyers than sellers, thereby forcing prices down) is not the same as a forced transaction or distress sale.

Market value adjustments are recognised on all positions that are measured at fair value, with fair value changes being reported in the income statement or in OCI. They relate to close-out costs, adjustments for less-liquid positions or markets, mark-to-model-related valuation adjustments, counterparty risk (credit value adjustment) and funding costs:

- Credit value adjustments (CVAs) are used when measuring derivatives to ensure that their market value is adjusted to reflect the credit risk of the counterparty. In making this adjustment, both the mark-to-market value of the contract and its expected future fair value are taken into account. These valuations are weighted based on the counterparty credit risk that is determined using a quoted Credit Default Swap (CDS) spread, or, if there is no such spread, on the counterparty credit risk that is derived from bonds whose issuers are similar to the derivative counterparty in terms of rating, sector and geographical location. A debt value adjustment (DVA) is made for contracts where the counterparty is exposed to KBC. It is similar to a CVA, but the expected future negative fair value of the contracts is taken into consideration.
- A funding value adjustment (FVA) is a correction made to the fair value of uncollateralised derivatives in order to ensure that the (future) funding costs or income attached to entering into and hedging such instruments are factored in when measuring their value.

## Hedge accounting

KBC has elected to apply the hedge accounting principles under IAS 39 (EU carve-out version). KBC designates certain derivatives held for risk management purposes, as well as certain non-derivative financial instruments, as hedging instruments in qualifying hedging relationships. On initial designation of the hedge, KBC formally documents the relationship between the hedging instrument(s) and hedged item(s), including the risk management objective and strategy in undertaking the hedge, together with the method that will be used to assess the effectiveness of the hedging relationship. KBC makes an assessment, both at inception of the hedging relationship and on an ongoing basis, of whether the hedging instrument(s) is/are expected to be highly effective in offsetting the changes in the fair value or cashflows of the respective hedged item(s) during the period for which the hedge is designated, and whether the actual results of each hedge are within a range of 80–125%. KBC makes an assessment for a cashflow hedge of a forecast transaction of whether it is highly probable to occur and presents an exposure to variations in cashflows that could ultimately affect the income statement.

KBC uses the following hedge accounting techniques: cashflow hedges, fair value micro-hedges, fair value hedges for a portfolio of interest rate risk, and hedges of net investments in foreign operations.

**Cashflow hedges:** if a derivative is designated as the hedging instrument in a hedge of the variability in cashflows attributable to a particular risk associated with a recognised asset, liability or highly probable forecast transaction that could affect the income statement, the effective portion of changes in the fair value of the derivative is recognised in OCI and presented in the hedging reserve (cashflow hedge) within OCI. Any ineffective portion of changes in the fair value of a derivative is immediately recognised in the income statement under 'Net result from financial instruments at fair value through profit or loss'. The amount recognised in OCI is reclassified to the income statement (as a reclassification adjustment in the same period as the hedged cashflows affect the income statement) under 'Net interest income'. If the hedging derivative expires or is sold, terminated or exercised, or the hedge no longer meets the criteria for cashflow hedge accounting, or the hedge designation is revoked, then hedge accounting is discontinued prospectively. Any cumulative gain or loss existing in OCI at that time remains in OCI and is recognised under 'Net result from financial instruments at fair value through profit or loss' when the forecast transaction is ultimately recognised in the income statement. When a forecast transaction is no longer expected to occur, the cumulative gain or loss that was reported in OCI is immediately recycled to the income statement under 'Net result from financial instruments at fair value through profit or loss'.

**Fair value micro-hedging:** when a derivative is designated as the hedging instrument in a hedge of the change in fair value of a recognised asset or liability (portfolio of recognised assets or liabilities) or a firm commitment that could affect the income statement, changes in the fair value of the derivative are immediately recognised in the income statement together with changes in the fair value of the hedged item that are attributable to the hedged risk (in the same item in the income statement as the hedged item). However, accrued interest income from interest rate swaps is recognised in 'Net interest income'. If the hedging derivative expires or is sold, terminated or exercised, or the hedge no longer meets the criteria for fair value hedge accounting, or the hedge designation is revoked, then hedge accounting is discontinued prospectively. Any adjustment up to the point of discontinuation that is made to a hedged item for which the effective interest method is used is amortised to the income statement as part of the recalculated effective interest rate of the item over its remaining life or recognised directly when the hedged item is derecognised.

**Fair value hedges for a portfolio of interest-rate risk (macro-hedging):** the EU's macro-hedging carve-out means that a group of derivatives (or proportions of them) can be viewed in combination and jointly designated as a hedging instrument, and removes some of the limitations on fair value hedge accounting relating to hedging core deposits and underhedging strategies. Under the EU carve-out, hedge accounting may be applied to core deposits and will be ineffective only when the revised estimate of the amount of cashflows in scheduled time buckets falls below the designated amount of that bucket. KBC hedges the interest rate risk of the financial asset portfolios and the financial liability portfolios. Interest rate swaps are measured at fair value, with fair-value changes being reported in the income statement. Accrued interest income from interest rate swaps is recognised in 'Net Interest Income'. The hedged amount of financial assets and liabilities is measured at fair value as well, with fair value changes being reported in the income statement. For hedged items measured at amortised cost, the fair value of the hedged amount is presented as a separate item on the assets or liabilities side of the balance sheet. If a hedge is ineffective, the cumulative fair value change in the hedged amount that was presented as a separate item on the balance sheet will be amortised to the income statement over the remaining lifetime of the hedged assets or will be immediately removed from the balance sheet if ineffectiveness is due to derecognition of the corresponding financial assets and liabilities.

**Hedge of net investments in foreign operations:** when a derivative instrument or a non-derivative financial instrument is designated as the hedging instrument in a hedge of a net investment in a foreign operation having a different functional currency than the direct holding company of the foreign operation, the effective portion of changes in the fair value of the hedging instrument is recognised in the hedging reserve (investment in foreign operation) in OCI. Any ineffective portion of the changes in the fair value of the derivative is recognised immediately in the income statement. The amount recognised in OCI is reclassified to the income statement as a reclassification adjustment on disposal of the foreign operation (which includes a dividend distribution or capital decrease).

## Insurance contracts

### General

#### Scope

In order to qualify as an insurance contract, the associated insurance risk must be significant even if the insured event is extremely unlikely to occur, for example catastrophic events such as earthquakes. Whether insurance risk is significant is assessed on initial recognition of each individual contract on a present value basis.

In general, the following types of contracts within KBC are in scope of IFRS 17: Non-life insurance contracts, reinsurance contracts (accepted & ceded), Life insurance contracts being the non-unit-linked contracts, the unit-linked contracts, the hybrid products and investment contracts with discretionary participating features if issued by a KBC insurance entity.

In general, the following types of contracts are out of scope of IFRS 17: investment contracts without discretionary participating features (IFRS 9), most unit-linked contracts of KBC Insurance Belgium (IFRS 9) as these insurance contracts do not contain significant insurance risk, credit cards including certain cover issued by a KBC bank entity (IFRS 15), and roadside assistance contracts (IFRS 15).

Distinct non-insurance components are separated from the insurance components in the contract and thus accounted for in accordance with the appropriate IFRS.

#### Level of aggregation

IFRS 17 calculations are performed at an aggregated level, rather than contract by contract, taking into account the following four dimensions:

- IFRS 17 portfolio (aggregation of contracts subject to similar risks and managed together);
- Annual cohort (year of inception of the policy);
- Profitability of the group of contracts (onerous, profitable, doubtful; assessed at inception);
- Set of contracts (aggregation of contracts with a homogeneous profitability expectation).

#### Aggregation by IFRS 17 portfolio

IFRS 17 portfolios are country-specific and driven by the local product mix (similar risks) and the way in which the local insurance business is managed (managed together). As a minimum, the portfolios are broken down as follows:

- Life
  - Unit-linked
  - Non-unit-linked
  - Hybrid products
- Non-life insurance
  - Personal insurance
  - Liabilities – MTPL
  - Liabilities – other than MTPL
  - Property (including other) other than fully comprehensive
  - Fully comprehensive
  - Accepted reinsurance
- Ceded reinsurance

#### Aggregation by annual cohort

KBC applies annual cohorts (a cohort is a time bucket of contracts issued in the same year), aligned with the start and end of the financial year of KBC. On 23 November 2021, the EU published a Regulation endorsing IFRS 17 Insurance Contracts, including the amendments to the original IFRS 17 and a solution for the annual cohort requirement for certain types of insurance contracts, for use in the European Union. KBC will not apply the European optional exemption from the annual cohort requirement.

### *Aggregation by group of contracts: onerous, profitable or doubtful*

#### *BBA and VFA – Expected profitability on initial recognition*

For contracts measured according to the Building Block Approach (BBA, see below) and the Variable Fee Approach (VFA, see below), the allocation to the onerous, profitable or doubtful group of contracts (GoC) is determined based on the presence of a Contractual Service Margin (CSM is the unearned profit in the group of contracts at inception) under different risk adjustment levels (i.e. compensation for uncertainty in the amount and timing of future cashflows):

- If CSM < 0 when risk adjustment is calculated at a 75% confidence level, onerous group of contracts
- If CSM > 0 when risk adjustment is calculated at a 75% confidence level AND
  - if CSM < 0 when the risk adjustment is calculated at a 90% confidence level, doubtful group of contracts
  - if CSM > 0 when the risk adjustment is calculated at a 90% confidence level, profitable group of contracts

#### *PAA – Expected profitability on initial recognition*

For the Premium Allocation Approach (PAA), facts and circumstances indicating that the group of contracts can be onerous are assessed by the IFRS 17 expected economic combined ratio of more than 100%. This ratio differs from the externally published combined ratio. The IFRS 17 expected economic combined ratio is calculated for a set of contracts on an annual basis. Consequently, the new business of a year is assigned to one specific group of contracts under IFRS 17. In exceptional cases, when qualitative information reveals facts and circumstances indicating a negative trend in the IFRS 17 expected economic ratio, a recalculation is performed during the financial year.

#### *Aggregation by set of contracts*

A set of contracts is an aggregation of contracts with a homogeneous profitability expectation. A set of contracts (SoC) is defined such that the conclusion on the expected profitability of the SoC and the associated classification (i.e. profitable, doubtful or onerous) equals the conclusion that would have been reached if the expected profitability assessment had been carried out at the level of the individual contract.

#### *Recognition – derecognition*

KBC recognises a group of insurance contracts (and accepted reinsurance contracts) it issues from the earliest of the following:

- The beginning of the coverage period of the group of contracts;
- The date when the first payment from a policyholder in the group becomes due;
- For a group of onerous contracts, when the group becomes onerous.

If there is no contractual due date, the first payment from the policyholder is deemed to be due when it is received.

As time progresses in the cohort, new business can be added to a group of contracts if it meets the initial recognition criteria. KBC recognises a group of ceded reinsurance contracts held from the earlier of the following:

- The beginning of the coverage period of the group of reinsurance contracts held;
- The date the entity recognises an onerous group of underlying insurance contracts, if the entity entered into the related ceded reinsurance contract in the group of reinsurance contracts held at or before that date.

KBC delays the recognition of a group of reinsurance contracts held that provide proportionate coverage until the date that any underlying insurance contract is initially recognised, if that date is later than the beginning of the coverage period of the group of reinsurance contracts held.

An insurance liability is derecognised from the balance sheet when it is extinguished, i.e. when the obligation specified in the contract is discharged or cancelled or expires.

#### *Valuation*

IFRS 17 applies uniform measurement principles for insurance liabilities that take into account the insurance contract characteristics.

- The general model, the Building Block Approach (BBA), is applied to most Life products.
- The optional Premium Allocation Approach (PAA) is a simplified measurement model that can be used when meeting the PAA eligibility criteria and is applied to most Non-life products and reinsurance contracts.
- The Variable Fee Approach (VFA) is an adjusted Building Block Approach for Life insurance contracts where cashflows to be paid to the policyholder depend significantly (for more than 50%) on the return of the invested assets. This is a mandatory measurement model when fulfilling the VFA eligibility criteria and is applied to unit-linked products and some hybrid products of Central European entities.

Only one measurement model can be applied to each IFRS 17 portfolio.

The insurance liabilities represent all rights and obligations arising from insurance contracts issued and consist of two components, namely a Liability for Remaining Coverage (LRC) and a Liability for Incurred Claims (LIC).

#### **Measurement of Life insurance liabilities**

The Life insurance liabilities are mostly valued according to either the BBA or the VFA model:

- Valuation according to the BBA is applied to calculate the liability for non-unit-linked life insurance contracts and for some hybrid products.

- Valuation according to the VFA is applied in Central European entities to calculate the liability for unit-linked contracts and some hybrid products where the cashflows to be paid to the policyholder depend significantly on the return of the invested assets.

### **Valuation according to the Building Block Approach (BBA)**

The insurance liability consists of the following four blocks:

- Actuarially estimated value of expected future cashflows;
- Discounting to convert the estimation into a present value;
- Risk adjustment as compensation for the uncertainty in the amount and timing of the expected future cashflows;
- Contractual Service Margin (CSM), being the unearned profit that is released from the balance sheet in P&L over the term of the contract based on services provided, i.e. there are no day one gains.

#### *Estimation of expected future cashflows*

The basic principle is that Solvency II cashflows are used to ensure consistency with IFRS 17. The IFRS 17 estimation of future cashflows deviates from Solvency II on the following points:

- Under Solvency II all expenses are included in the Best Estimate. Under IFRS 17 expenses are divided into directly attributable costs and non-directly attributable costs. Directly attributable costs are expenses directly related to insurance contracts. Only these directly attributable costs are included in the estimation of expected future cashflows.
- Under Solvency II contracts where the insurer is at risk, tacit renewals and contracts where the coverage period starts in the future are within the Solvency II contract boundary. Under IFRS 17 cashflows are within the contract boundary if they arise from rights and obligations that exist during the reporting period
  - in which the entity can compel the policyholder to pay the premiums; or
  - in which the entity has a substantive obligation to provide services.

Contracts under which the insurer provides cover, i.e. under which the insurer is at risk, are within the IFRS 17 contract boundaries. Tacit renewals for Non-life insurance contracts and contracts with a coverage period starting in the future are outside the IFRS 17 contract boundaries.

Level of aggregation of projected cashflows: the Solvency II aggregation levels are Lines of Business (LoBs) and risk buckets. The IFRS 17 unit of account is based on portfolios, cohorts and expected profitability.

#### *Discounting – time value of money*

A discount rate is created per currency, in line with the currency of the cashflows. The starting point for the creation of the curves are observable market prices of a set of assets with multiple durations.

The inflation assumptions for the nominal cashflows and the discount rates are consistent. Inflation is taken into account in the projection of the cashflows. Notwithstanding the reference to 'cashflows', the standard allows the same discount curve to be applied to all cashflows in the same contract. This simplification is applied at KBC.

For cashflows that vary with underlying items, the discount rate is determined by means of a top-down approach. Cashflows that vary with underlying items are typically cashflows such as interest-rate guarantees on future premiums that are not fixed at inception of the contract, future profit sharing, future lapses, etc. A top-down approach is achieved by using a risk-free rate (i.e. interest rate swap) adjusted with a spread based on a reference portfolio of assets. Such a portfolio is based on the current asset mix an entity holds. In addition, the discount curve must only reflect the characteristics of the insurance liabilities. The risk-taking curve is adjusted to exclude the part not related to the insurance liabilities.

Per currency, a Last Liquid Point (LLP) is set at the level of KBC that is consistent for all entities. The LLPs per currency are defined by taking the last available tenor for the risk-free rate in the relevant currency.

For long-term Life insurance contracts, the cashflows are modelled over a duration of 110 years. The Ultimate Forward Rate (UFR) is the rate of the 110-year tenor to which the discount curve must converge. This UFR is defined as the sum of an expected real rate and an expected inflation rate.

For cashflows that do not vary with underlying items, KBC chooses to apply the bottom-up approach. The bottom-up approach is determined by adding an illiquidity premium on top of a risk-free rate, so that the discount curve reflects the illiquidity characteristics of the insurance contract liabilities. This approach is used for Non-life liabilities for incurred claims. The illiquidity premium is the premium demanded by the policyholder because the insurance contract liabilities cannot be easily converted into cash at fair market value.

#### *Risk adjustment of Life insurance liabilities*

The risk adjustment for non-financial risk is the compensation that the entity requires for bearing the uncertainty about the amount and timing of cashflows that arises from non-financial risk. It is a buffer on top of the Best Estimate future cashflows which represents a 50% probability of being able to fulfil future obligations and thus also a 50% probability of not being able to meet future obligations for outstanding contracts.

Life insurance liabilities are characterised by (long-term) cashflows based on biometric parameters. The risk adjustment is defined as the difference between the Value at Risk (VaR) and the best estimate of future cashflows as part of the fulfilment cashflows. The VaR is calculated at a 75% confidence level. Non-financial risks included in the VaR model are mortality risk, longevity risk, morbidity/disability risk, lapse risk, expense risk and revision risk. The correlations between the different risk types are in line with the correlation matrix of Solvency II.

The diversification benefits between life and non-life insurance contracts are not considered in the calculation, also not at entity level. The risk adjustment is calculated at the level of a set of contracts. There is no diversification effect at this level either.

#### *Contractual service margin*

The contractual service margin (CSM) represents the unearned profit the insurer will recognise in P&L as services are provided under the insurance contracts. The CSM is recognised in the balance sheet as part of the insurance liability on initial recognition in order to avoid a day one gain. The CSM on the balance sheet is released gradually over time, on the basis of services provided in the period, and should be zero at the end of the coverage period for a group of contracts.

The CSM release pattern is based on coverage units in the GoC. The number of coverage units is the quantity of services provided by the insurer under the contracts in that GoC, determined by considering for each contract the quantity of the benefits provided to the policyholder under a contract and its expected coverage period. The CSM amount recognised in P&L is the amount of coverage units allocated to the current period for the insurance coverage provided in the current period. The number of coverage units is reassessed at the end of each reporting period to reflect the most up-to-date assumptions of the contract.

KBC has opted to reflect the time value of money on coverage units. By discounting the coverage units, a more stable allocation of the CSM to P&L is achieved. For contracts providing multiple services, i.e. insurance coverage, investment return services and investment management services, KBC works with so-called 'multivariate coverage units', taking the following into consideration:

- Coverage units are determined based on the individual benefit components separately;
- Weights are assigned to each component to reflect an appropriate level of service to be provided.

Such weightings appropriately reflect the release of CSM based on the quantity of the benefits provided for each service. Analogous to coverage units, these weights are also reassessed at the end of each reporting period.

Coverage units cannot be negative. They have a positive sign and are floored to zero. In case of zero coverage units in a given period, no CSM is allocated to P&L as no services have been provided in the period. This is possible in some cases, for instance where contracts provide for 'waiting periods'. In such cases, the contract has been signed by the policyholder but there is a mandatory waiting period for the client to be able to benefit from insurance coverage.

#### **Valuation according to the Variable Fee Approach (VFA)**

Under the VFA, the CSM mainly reflects the fee that KBC expects to earn on the market value of the Assets under Management (AUM), also referred to as 'underlying items'. The CSM is determined as the net of the fair value of the underlying items and the total entity obligation to the policyholder. The change in the variable fee that impacts the CSM is determined as the net of:

- the change in the fair value of the underlying items; and
- the change in the total entity obligation to the policyholder.

KBC applies the simplification of a combined amount rather than the different CSM unlocking adjustments separately.

Under the VFA, the difference in measurement from BBA lies in the subsequent measurement of direct participating contracts. All changes in fulfilment cashflows are absorbed by the CSM, until the CSM becomes negative and a loss is recognised in P&L.

In Belgium, the insurance company has discretion over the amount of profit sharing allocated to policyholders. The policyholder does not have an 'enforceable right' to participate in the returns of the insurance company, which means that the VFA eligibility criteria are not fulfilled and the BBA is applied.

## **Measurement of Non-life insurance liabilities**

Valuation according to the PAA is applied for the liability for most Non-life products. The PAA Liability for Remaining Coverage (LRC) reflects the premium receipts and the acquisition cashflows adjusted for amounts recognised in the income statement on a pro rata temporis basis. When an insured claim arises, a Liability for Incurred Claims (LIC) is recognised, which is similar to the BBA LIC (see below). In the case of onerous contracts, an additional liability to cover expected future losses is added to the LRC on the balance sheet and a loss is recognised immediately in P&L.

### **Valuation according to the Premium Allocation Approach**

The PAA LRC reflects only premiums received and acquisition cashflows. As such, to appropriately present the insurance liability on a cash basis, an adjustment is performed by netting insurance payables and receivables against the LRC value. Under the PAA, KBC will not make use of the option to expense acquisition costs when incurred. At the end of each reporting period, acquisition cashflows are amortised (i.e. recorded as an insurance service expense) and some of the premium receipts are earned (i.e. recorded as insurance revenues). Both components of the LRC are allocated to P&L on the basis of passage of time or the expected timing of incurred claims and benefits, if that pattern better reflects the release from risk.

### **Measurement of the Liability for Incurred Claims (LIC) for claims outstanding**

The Liability for Incurred Claims is measured separately. A discounted best estimate of future cash outflows subject to a risk adjustment as a safety margin is provisioned on the balance sheet. No CSM is included in the LIC as there is no future coverage in scope of the liabilities for incurred claims, i.e. it contains fulfilment cashflows related to past service. A provision for the internal cost of settling claims is included, which is calculated as a percentage based on past experience. The risk adjustment for Non-life insurance liabilities is only calculated for claims incurred. Consequently, only reserve risk is taken into account. Comparable with Life insurance liabilities, a Value at Risk method (VaR) is used, but here it is calculated at a 90% confidence level.

### **Subsequent measurement**

#### *BBA/VFA – Liability for Remaining Coverage*

At the end of each reporting period, subsequent to initial recognition, KBC updates its estimates and assumptions to reflect the most up-to-date situation. As a result of these updates, the carrying amount of fulfilment cashflows will vary from one period to another.

Subsequent measurement under BBA/VFA for the LRC is driven by:

- experience adjustments – either absorbed by the CSM (i.e. related to future service) or recorded in the insurance result (i.e. related to current or past service) – and portfolio rollforward;
- non-economic parameter updates to the fulfilment cashflows;
- economic parameter updates to the fulfilment cashflows;
- CSM release.

### *PAA – Liability for Remaining Coverage*

Under the PAA, the LRC is unwound on a pro rata temporis basis to obtain the so-called ‘earned premiums’, i.e. the premium reserve and the deferred acquisition commission reserve. At the end of each reporting period, acquisition cashflows are amortised (i.e. recorded as an insurance service expense) and some of the premium receipts are earned (i.e. recorded as insurance revenues). Both components of the LRC are allocated to P&L on the basis of passage of time or the expected timing of incurred claims and benefits, if that pattern better reflects the release from risk.

### *BBA/VFA/PAA – Liability for Incurred Claims*

Any changes to the Liability for Incurred Claims are recorded in the income statement. Depending on the driver of such changes, they are recorded in:

- insurance service expenses. Main drivers: updates of fulfilment cashflows, i.e. higher or lower total expected claim payments, changes in the statistical percentage of internal claims handling expenses, etc.; or
- insurance finance income and expense. Main drivers: a change in the discount rate, interest from deposits at the ceding company.

### **Other matters**

KBC has opted for a year-to-date approach, i.e. a recalculation of previously reported quarters, with the impact of the recalculation being included in the current period.

KBC chooses to disaggregate insurance finance income and expense (IFIE) between P&L and OCI. This means recognising in P&L the interest expense on the insurance liability over the reporting period, with this interest expense being calculated using the locked-in rate (i.e. the rate curve applicable at the inception of the IFRS 17 contract) and recognising in OCI the impact of changes in the market interest rate over the reporting period, with the exception of:

- insurance contracts measured under BBA where changes in financial risk have a significant impact on the amounts due to policyholders (future interest-rate guarantees, profit-sharing), for which the allocation to the income statement is derived from the amounts expected to be credited to policyholders (expected crediting rate);
- insurance contracts measured under VFA, for which the current period book yield approach is used. The amount in IFIE corresponds to the financial result presented in the income statement of the underlying items to ensure that the total net financial result equals 0 (also referred to as the ‘mirroring approach’).

The liability position of insurance contracts and the asset position of reinsurance contracts is presented in the balance sheet on a received basis. Ceded reinsurance contracts (i.e. reinsurance contracts held) are required to be accounted for and presented separately from the underlying contracts to which they relate.

Upon the acquisition of another insurance company or a portfolio transfer, the consideration received or paid partly consists of the Value of Business In-force (VBI). Insurance contracts acquired in a business combination are measured in the same way as insurance contracts issued by the entity except that the fulfilment cashflows are recognised at the acquisition date.

### **Leasing**

All leases are required to be classified as either finance leases or operating leases. The classification under IFRS 16 is based on the extent to which risk and rewards incidental to ownership of leased assets lie with the lessor or the lessee. A finance lease transfers substantially all the risks and rewards incidental to ownership of an asset.

This classification is crucial for positions as a lessor, but less important for positions as a lessee, since both classifications result in similar recognition and measurement of the lease on the balance sheet and in the income statement.

### **Equity**

Equity represents the residual interest in KBC’s total assets after deduction of all its liabilities (referred to as ‘net assets’) and encompasses all shares issued by KBC, reserves attributable to the holders of the shares and minority interests.

KBC classifies all issued financial instruments as equity or as a financial liability based on the substance of the contractual arrangements. The critical feature that distinguishes a financial liability from a share is whether KBC has an unconditional right to avoid delivering cash or another financial asset to settle a contractual obligation.

Minority interests represent the equity in a subsidiary that is not attributable to the holders of KBC shares. When the proportion of the equity held by the minority interests changes, KBC adjusts the carrying value of the controlling and minority interests to reflect changes in their relative interests in the consolidated companies. KBC recognises in equity any difference between the amount by which the minority interests are adjusted and the fair value of the consideration paid or received, and allocates it to its controlling stake.

KBC can buy back its own shares within the legal framework. These treasury shares (ordinary shares) are initially recognised on the balance sheet on the transaction date under the ‘treasury shares’ heading. The acquisition price (including transaction costs) is deducted from equity. The dividend income from ‘treasury shares’ is recognised in equity.

## Employee benefits

### Short-term employee benefits

Short-term employee benefits, such as salaries, paid absences, performance-related cash awards and social security contributions, are recognised over the period in which the employees provide the corresponding services. The related expenses are presented in the income statement as 'Operating expenses' under the 'Staff expenses' heading.

### Post-employment benefits

KBC offers its employees pension schemes in the form of defined contribution or defined benefit plans. Under the defined contribution plans, KBC's statutory or constructive obligation is limited to the amount that it agrees to contribute to the fund. The amount of the post-employment benefit to be received by the employee is determined by the amount of the contributions paid by KBC and the employee into the post-employment benefit plan, as well as by the investment returns arising from those contributions. The actuarial risk is borne by the employee.

Conversely, under the defined benefit plans, KBC's obligation is to provide the agreed benefits to current and former employees and, in substance, the actuarial risk and investment risk fall on KBC. This means that if, from an actuarial or investment viewpoint, things turn out worse than expected, KBC's obligation may be increased.

In Belgium, defined contribution plans have a legally guaranteed minimum return and the actual return can be lower than the legally required return. In addition, these plans have defined benefit plan features and KBC treats them as defined benefit plans.

Liabilities under the defined benefit plans and the Belgian defined contribution plans (or pension liabilities) are included under 'Other liabilities' and relate to the obligations for retirement and survivor's pensions, early retirement benefits and similar pensions and annuities.

The pension obligations for employees under the defined benefit plans are calculated using the projected-unit-credit method, with each period of service granting additional entitlement to pension benefits.

Actuarial valuations are performed every reporting period. The defined benefit liabilities are discounted using rates equivalent to the yields on high-quality corporate bonds that are denominated in the currency in which the benefits will be paid and that have a maturity similar to the related pension liabilities.

Changes in the net defined benefit liability/asset, apart from cash movements, are grouped into three main categories and recognised in operating expenses (service costs), interest expenses (net interest costs) and other comprehensive income (remeasurements).

### Net fee and commission income

Most net fee and commission income falls under the scope of IFRS 15 (Revenue from Contracts with Customers), as it relates to the services that KBC provides to its clients and is outside the scope of other IFRS standards. For the recognition of revenue, KBC identifies the contract and defines the promises (performance obligations) in the transaction. Revenue is recognised only when KBC has satisfied the performance obligation.

The revenue presented under 'Securities and asset management' falls under the scope of IFRS 15 and, in principle, entails KBC keeping assets in a trust for the beneficiary ('fund') and being responsible for investing the amounts received from clients to their benefit. These transactions are straightforward, because KBC provides a series of distinct services which clients use at the same time when receiving the benefits. In return, KBC receives a monthly or quarterly management fee, which is calculated as a fixed percentage of the net asset value, or a subscription fee retained from the beneficiary. The fees do not include a variable component.

Revenue reported as 'Margin on life insurance investment contracts without DPF' represents the amount realised on investment contracts without a discretionary participation feature, i.e. a fixed percentage or fixed amount is withheld from the client's payments, enabling the insurance company to cover its expenses.

Payment services, where KBC charges clients for certain current-account transactions, domestic or foreign payments, for payment services provided through ATMs, etc., are usually settled when the actual transaction is carried out, enabling the relevant fee to be recognised directly at that time.

### Levies

Public authorities can impose various levies on KBC. The size of the levies can depend on the amount of revenue (mainly interest income) generated by KBC, the amount of deposits accepted from clients, and the total balance sheet volume, including corrections based on certain, specific ratios. In accordance with IFRIC 21, levies are recognised when the obligating event that gives rise to recognition of the liability has occurred as stated in the relevant legislation. Depending on the obligating event, levies can be recognised at a single point in time or over time. Most of the levies imposed on KBC have to be recognised at a single point in time, which is mainly the beginning of the financial year. KBC recognises levies under 'Operating expenses'.

## Income tax

Income tax consists of three items, namely taxes paid/payable over the reporting period, underprovisioning/overprovisioning in previous years, and changes in deferred tax assets/deferred tax liabilities. It is accounted for either in the income statement or in other comprehensive income, depending on where the items that triggered the tax are recorded. Income taxes that are initially accounted for in other comprehensive income and that relate to gains or losses that are subsequently recognised in the income statement are recycled to the income statement in the same period in which that item is accounted for in the income statement.

Deferred and current tax assets and liabilities are offset when there is both a legal right of offset and the intention to settle on a net basis or to realise the asset and settle the liability simultaneously.

### Current tax assets/liabilities

Current tax for the period is measured at the amount expected to be paid to or recovered from the tax authorities, using the rates of tax in effect during the reporting period.

### Deferred tax assets/liabilities

Deferred tax liabilities are recognised for all taxable temporary differences between the carrying value of an asset or liability and its tax base. They are measured using the tax rates that are substantively enacted at the reporting date and expected to be in effect on realisation of the assets or settlement of the liabilities to which they relate and that reflect the tax consequences following from the manner in which the entity expects to recover or settle the carrying value of the underlying asset or liability at the balance sheet date.

Deferred tax assets are recognised for all deductible temporary differences between the carrying value of assets and liabilities and their tax base, as well as for the carry forward of unused tax losses and unused tax credits, to the extent that it is probable that taxable profit will be available against which the deductible temporary differences can be utilised. KBC calculates deferred tax assets to carry forward unused tax losses. When estimating the period over which tax losses can be set off against future taxable profits, KBC uses projections for a period of eight to ten years.

Deferred tax assets/liabilities that relate to business combinations are recorded directly in goodwill.

Deferred tax assets/liabilities are not discounted.

## Property and equipment

Property and equipment are recognised initially at cost (including directly allocable acquisition costs). KBC subsequently measures property and equipment at the initial cost less accumulated depreciation and impairment. The rates of depreciation are determined on the basis of the estimated useful life of the assets and are applied according to the straight-line method from the moment the assets are available for use. Property and equipment are derecognised upon disposal or when the relevant asset is permanently withdrawn from use and no future economic benefits are expected from its disposal. Gains or losses upon derecognition are recognised in the income statement in the period in which derecognition occurs.

Property and equipment are subject to impairment testing when there is an indication that the asset might have been impaired.

Depreciation charges, impairment losses and gains or losses on disposal are recognised under 'Operating expenses' in the income statement, with the exception of assets that are leased under operating leases (KBC as a lessor), for which the costs are recognised in 'Net other income'. Where a disposal falls within the definition of a discontinued operation, the net results are reported in a single line in the income statement (see 'Discontinued operations' below).

## Investment property

Investment property is defined as a property built, purchased or acquired by KBC under a finance lease and is held to earn rentals or for the purpose of capital appreciation rather than being used by KBC for the provision of services or for administrative purposes.

Investment property is initially recognised at cost (including directly attributable costs). KBC subsequently measures it at the initial cost less accumulated depreciation and impairment.

The depreciation charge is recognised under 'Net other income' in the income statement.

## Intangible assets

Intangible assets include goodwill, software developed in-house, software developed externally and other intangible assets. Intangible assets can be (i) acquired as part of a business combination transaction (see 'Business combinations and goodwill' below), (ii) acquired separately or (iii) developed internally.

Separately acquired intangible assets (mainly software developed externally) are initially recognised at cost. Internally developed intangible assets (mainly software developed in-house) are recognised only if they arise from development and KBC can demonstrate:

- the technical feasibility of completing them;
- an intention to complete for use or sale;
- an ability to use or sell them;
- the way in which the intangible assets will generate future economic benefits;
- the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible assets;
- the possibility to reliably measure the expenditure attributable to the intangible assets during their development.

Internally generated intangible assets are initially measured at the development costs directly attributable to the design and testing of the unique software controlled by KBC.

Directly attributable costs capitalised as part of the software developed in-house include software development employee costs and directly attributable overheads.

Research expenses, other development expenditure, costs associated with maintaining software and investment projects (large-scale projects introducing or replacing an important business objective or model) that do not meet the recognition criteria are recognised as an expense in the period they are incurred.

Intangible assets are subsequently carried at cost less accumulated amortisation and accumulated impairment losses. Amortisation begins when the asset is available for use as intended by management. Software is amortised as follows:

- System software (initial purchased software forming an integral part with hardware) is amortised at the same rate as hardware.
- Standard software and customised software developed by a third party or developed in-house are amortised over five years according to the straight-line method from the time the software is available for use.
- Core systems (typically including deposit account processing, loan and credit processing, interfaces to the general ledger and reporting tools) are amortised according to the straight-line method over a minimum period of eight years.

## Impairment of non-financial assets

When KBC prepares financial statements, it ensures that the carrying value of the non-financial asset does not exceed the amount that could be obtained from either using or selling it ('recoverable amount'). Property and equipment, investment property and software are subject to the impairment review only when there is objective evidence of impairment. Goodwill and intangible assets with an indefinite useful life are subject to impairment reviews at least annually and also reviewed for impairment indicators every quarter.

Indications that an impairment loss is required may stem from either an internal source (e.g., the condition of the asset) or an external source (e.g., new technology or a significant decline in the asset's market value).

When an impairment indicator is present, KBC reviews the asset's recoverable amount and the asset is impaired if its recoverable amount is lower than its carrying value at the reporting date. The recoverable amount is defined as the higher of the value in use and the fair value less cost to sell.

Value in use is defined as the discounted future cashflows expected to be derived from an asset or a cash-generating unit. Impairment is borne at individual asset level, but when the individual asset does not generate cash inflows that are largely independent of those from other assets or groups of assets, the recoverable amount is determined for the so-called 'cash-generating unit' (CGU) to which the asset or group of assets belongs. In forming the CGUs, KBC applies its own judgement to define the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets. This process mainly applies to goodwill that has been recognised in relation to acquisitions.

Impairment losses are recognised in the income statement for the period in which they occur. An impairment loss can be reversed if the condition that triggered it is no longer present, except for goodwill, which can never be reversed. Impairment gains are recognised in the income statement for the period in which they occur.

### Provisions, contingent liabilities and contingent assets

Provisions are recognised on the reporting date if and only if the following criteria are met:

- There is a present obligation (legal or constructive) due to a past event;
- It is probable that an outflow of resources embodying economic benefits will be required to settle the obligation;
- A reliable estimate can be made of the amount of the obligation.

The amount recognised as a provision is the best estimate of the expenditure required to settle the obligation at the balance sheet date. When the effect of time is material, the amount recognised as a provision is the net present value of the best estimate.

Due to its inherent nature, a provision requires management judgement regarding the amount and timing of probable future economic outflows.

### Consolidated financial statements / interim financial statements

All material entities (including structured entities) over which KBC exercises direct or indirect control as defined in IFRS 10 are consolidated according to the method of full consolidation. Changes in ownership interests (that do not result in a loss of control) are accounted for as equity transactions. They do not affect goodwill or profit or loss.

Subsidiaries that are not included in the consolidated financial statements because of immateriality are classified as equity instruments at fair value through other comprehensive income, with all fair value changes being reported in other comprehensive income, except for dividend income, which is recognised in the income statement. Material companies over which joint control is directly or indirectly exercised and material investments in associates (companies over which KBC has significant influence) are all accounted for using the equity method.

Consolidation threshold: subsidiaries are effectively included in the consolidated financial statements using the full consolidation method if at least two of the following materiality criteria are exceeded:

- Group share in equity is 2 500 000 euros;
- Group share in the result is 1 000 000 euros (absolute value);
- Group share in the balance sheet total is 100 000 000 euros.

In order to prevent too many entities from being excluded, KBC checks that the combined balance sheet total of the entities excluded from consolidation does not amount to more than 1% of the consolidated balance sheet total.

### Business combinations and goodwill

Business combinations are accounted for using the acquisition method. Under this method, the cost of an acquisition is measured as the aggregate of the consideration transferred (measured at acquisition-date fair value) and the amount of any minority interests in the acquired entity. For measurement of the minority interests, KBC can decide for each business combination separately whether to measure the minority interest at fair value or as its proportionate share of the acquired entity's net identifiable assets. The way the minority interest is measured on the acquisition date will have an impact on purchase accounting as a result of the determination of goodwill.

Goodwill is the excess of the cost of the acquisition over the acquirer's interest in the fair value of the identifiable assets acquired and liabilities and contingent liabilities assumed at the date of acquisition. In order to complete the acquisition accounting and determine the goodwill item, KBC applies a measurement period of 12 months. The classification of the financial assets acquired and financial liabilities assumed in the business combination is based on the facts and circumstances existing at the acquisition date (except for lease and insurance contracts, which are classified on the basis of the contractual terms and other factors at the inception of the relevant contract).

Goodwill is presented under 'Goodwill and other intangible assets' and is carried at cost less impairment losses. Goodwill is not amortised, but is tested for impairment at least once a year or when there is objective evidence (external or internal) that it should be impaired. If the acquisition accounting is not complete because the 12-month measurement period has not elapsed, the goodwill is not considered as final and is only tested if there is objective evidence that the provisional goodwill is impaired.

For the purpose of testing goodwill for impairment, it is allocated to each of KBC's cash-generating units that are expected to benefit from the synergies of the combination, irrespective of whether other assets or liabilities of the acquired entity are assigned to those units. An impairment loss is recognised if the carrying value of the cash-generating unit to which the goodwill belongs exceeds its recoverable amount. Impairment losses on goodwill cannot be reversed.

#### **Effects of changes in foreign exchange rates**

KBC's functional and presentation currency is the euro. Monetary assets and liabilities denominated in foreign currency are translated into the functional currency at the spot rate on the balance sheet date. Negative and positive valuation differences, except for those relating to the funding of equity instruments and investments of consolidated companies in a foreign currency, are recognised in the income statement. Non-monetary items measured at historical cost are translated into the functional currency at the historical exchange rate that existed on the transaction date. Non-monetary items carried at fair value are translated at the spot rate on the date the fair value was determined. Translation differences are reported together with changes in fair value. Income and expense items in foreign currency are taken to the income statement at the exchange rate prevailing when they were recognised.

Valuation differences are accounted for either in the income statement or in other comprehensive income. Valuation differences that are initially accounted for in other comprehensive income and that relate to gains or losses that are subsequently recognised in the income statement are recycled to the income statement in the same period in which that item is accounted for in the income statement. The balance sheets of foreign subsidiaries are translated into the presentation currency at the spot rate on the reporting date (except for equity, which is translated at the historical rate). The income statement is translated at the average rate for the financial year as a best estimate of the exchange rate on the transaction date.

#### **Related-party transactions**

A party related to KBC is either a party over which KBC has control or significant influence or a party that has control or significant influence over KBC. KBC defines its related parties as:

- KBC subsidiaries, KBC associates and joint ventures, KBC Ancora, Cera and MRBB;
- KBC key management staff (i.e. the Board of Directors and the Executive Committee of KBC Group NV).

Transactions with related parties must occur at arm's length.

#### **Non-current assets held for sale and disposal groups, liabilities associated with disposal groups and discontinued operations**

Non-current assets held for sale and disposal groups, liabilities associated with disposal groups

Non-current assets or groups of assets and liabilities held for sale are those where the carrying value will be recovered by KBC through a sale transaction, which is expected to qualify as a sale within a year, rather than through continued use. Non-current assets and liabilities held for sale are reported separately from the other assets and liabilities in the balance sheet at the end of the reporting date.

## Discontinued operations

A discontinued operation refers to a part of KBC that has been disposed of or is classified as held for sale and:

- represents a separate major line of business or geographical area of operations; or
- is part of a single, coordinated plan to dispose of a separate major line of business or geographical area of operations; or
- is a subsidiary acquired exclusively with a view to resale.

Results from discontinued operations are recognised separately in the income statement and in other comprehensive income and contain:

- the post-tax profit or loss of discontinued operations; and
- the post-tax gain or loss recognised on the measurement to fair value less the costs of the sale or disposal of the assets or group of assets.

## Events after the reporting period

Events after the reporting date are defined as favourable or unfavourable events that occur between the reporting date and the date on which the financial statements are authorised for issue. There are two types of event after the reporting date:

- Those which provide evidence of conditions that existed on the reporting date (adjusting events);
- Those that are indicative of conditions that arose after the reporting date (non-adjusting events).

The impact of adjusting events has already been reflected in the financial position and financial performance for the current year. The impact and consequences of non-adjusting events are disclosed in the notes to the financial statements.

## Main exchange rates used\*

	Exchange rate at 31-12-2024		Exchange rate average in 2024
	Change relative to 31-12-2023		Change relative to average in 2023
1 EUR = ... ... currency	(positive: appreciation relative to EUR) (negative: depreciation relative to EUR)	1 EUR = ... ... currency	(positive: appreciation relative to EUR) (negative: depreciation relative to EUR)
CZK	25.185	-2%	25.137
HUF	411.35	-7%	395.88

\* Rounded figures.

## Note 1.3: Critical estimates and significant judgements

When preparing the consolidated financial statements and applying KBC's accounting policies, management is required to make judgements, estimates and assumptions that affect the reported amounts of assets, liabilities, income and expenses. Some degree of uncertainty is inherent in almost all amounts reported. The estimates are based on the experience and assumptions that KBC's management believes are reasonable at the time the financial statements are being prepared.

Revisions to accounting estimates are recognised in the period in which the estimates are revised and in any future periods affected. Significant areas of estimation uncertainty, and critical judgements in applying accounting policies that have the most significant effect on the amounts recognised in the consolidated financial statements are found in, but not limited to, notes 1.4, 3.3, 3.6, 3.9, 3.11, 4.2, 4.4–4.8, 5.2, 5.5–5.7, 5.9 and 6.1.

#### Note 1.4: Climate-related information

ESG and supporting the transition to a more sustainable and resilient society – including focusing on the climate – are crucial to our overall business strategy and integrated into our day-to-day operations. We have a solid sustainability governance structure in place to ensure group-wide integration of our sustainability strategy, which involves responsibility at the highest level and spans all areas of ESG.

Because sustainability is firmly embedded in our day-to-day operations, it is not relevant to separately consider the financial impact of sustainability-related investments. We would like to emphasise that:

- KBC integrates sustainability-related opportunities and the related costs in the annual general budget round;
- As a financial institution, KBC is highly regulated in terms of sustainability and we provide the necessary resources to comply with these regulatory obligations;
- In addition, KBC has made several voluntary commitments for which appropriate efforts are made and resources deployed;
- KBC applies a strict environmental policy to its loan, investment and insurance portfolios. We have also defined ambitious climate targets for the most important sectors and products in our loan portfolio as well as in our investment portfolio. We work together with our clients to achieve these targets, and we actively collaborate with the companies in which we invest in order to reduce their climate impact.
- As part of our efforts to reduce our own direct footprint, we are taking relevant action in the areas of facilities (buildings) and mobility in particular, with a view to meeting our greenhouse gas emission reduction target. We are also achieving net climate neutrality by offsetting our remaining direct emissions.

All notes and other sections in the Annual Report in which direct or indirect reference is made to the climate and/or climate-related risks or sustainability in general are set out below.

In the 'Report of the Board of Directors':

- See 'How do we create sustainable value?' in 'Our business model'
- See 'What are our main challenges?' in 'Our business model'
- See 'Our role in society' in 'Our strategy'
- See 'Our business units' for each country under 'Our role in society'
- Sustainability statement

In the 'Consolidated financial statements' (in the notes below each table):

- Note 3.9: Impairment
- Note 4.1: Financial assets and liabilities, breakdown by portfolio and product
- Note 5.4: Property and equipment and investment property
- Note 5.5: Goodwill and other intangible assets
- Note 5.9: Retirement benefit obligations
- Note 6.2: Leasing

When preparing the financial reporting, we considered the financial impact of climate-related risks within the framework of the IFRS standards. These are mostly indirect risks to which KBC is exposed through, among other things, its loan, investment and insurance portfolios. These risks are a source of significant uncertainty in the medium and long term when preparing the financial reports, partly because it is difficult to assess the consequences of climate change for our current portfolios and also because it is uncertain to what extent the mitigating actions and plans for our (mainly indirect) climate impact have financial consequences for future portfolios (see the 'Sustainability statement' section'). The goals set by KBC may impact KBC's financial position and performance. The lending goals (providing loans for renewable energy and reducing the greenhouse gas intensity of loans) in particular can initially have a negative impact on the interest income realised on loans, perhaps through impact on margins (but with the loans still meeting the SPPI test) and/or production, which may later be offset by more limited credit losses given the increased resilience of the portfolio to climate-related risks. In the insurance business, too, climate-related risks constitute a significant uncertainty in the medium and long term when it comes to estimating the development of reserves to be maintained, in Non-life insurance in particular.

## 2.0 Notes on segment reporting

### Note 2.1: Segment reporting based on the management structure

Detailed information on the group's management structure and the results per segment can be found in the 'Our business units' section (which has not been audited by the statutory auditor). Based on IFRS 8, KBC has identified the Executive Committee and Board of Directors as 'chief operating decision-makers', responsible for allocating the resources and assessing the performance of the different parts of the company. The operating segments are based on the internal financial reporting to those policy bodies and on the location of the company's activities, resulting in geographical segmentation.

The three operating segments are (essentially):

- the Belgium Business Unit (all activities in Belgium);
- the Czech Republic Business Unit (all activities in the Czech Republic);
- the International Markets Business Unit (activities in Hungary, Slovakia and Bulgaria, reported together in accordance with IFRS 8.16).

For reporting purposes, there is also a Group Centre (comprising the results of the holding company, items that have not been allocated to the other business units, and the results of companies/activities to be divested).

#### Segment reporting

- The policy bodies analyse the performance of the segments based on a number of criteria, with the 'Result after tax' being the most important results indicator. The segment data is based entirely on IFRS data (with no adjustments).
- In principle, we assign a group company in its entirety to one specific segment/business unit. Exceptions are only made for those items that cannot clearly be allocated to a specific segment, such as charges attached to the subordination of loans (such items are recognised under Group Centre).
- We allocate the funding cost of participating interests to the Group Centre. Any funding cost in respect of leveraging at KBC Group NV level is also recognised under Group Centre.
- Transactions among the different segments are reported at arm's length.
- We recognise 'Net interest income' in the segment information without dividing it up into 'Interest income' and 'Interest expense'. This is permitted under IFRS because the bulk of the business units' income is in the form of interest, and management assesses and co-ordinates those business units primarily on the basis of net interest income.
- We do not provide any information on income from sales to external clients per group of products or services, since the information is prepared at consolidated level chiefly for each business unit, and not per client group or product group.
- For information on acquisitions and disposals, see Note 6.6. As a result of the finalisation of the sale of the Irish deposit and loan portfolios in February 2023, the results for Ireland have become immaterial and are no longer presented as a separate column (as part of the Group Centre) as of 2024.

## Note 2.2: Results by segment

	<b>2024 (in millions of EUR)</b>	<b>Belgium Business Unit</b>	<b>Czech Republic Business Unit</b>	<b>International Markets Business Unit</b>	<b>Hungary</b>	<b>Slovakia</b>	<b>Bulgaria</b>	<b>Group Centre</b>	<b>Total</b>

## 3.0 Notes to the income statement

### Note 3.1: Net interest income

(in millions of EUR)	2024	2023
Total	5 574	5 473
Interest income	19 746	20 170
Interest income on financial instruments calculated using the effective interest rate method		
Financial assets at amortised cost	9 803	10 233
Financial assets at fair value through OCI	507	384
Hedging derivatives	6 011	5 094
Financial liabilities (negative interest rate)	5	11
Other	1 580	2 143
Interest income on other financial instruments		
Financial assets MFVPL other than held for trading	70	55
Financial assets held for trading	1 770	2 250
Of which economic hedges	1 566	2 085
Other financial assets at fair value through profit or loss	0	0
Interest expense	-14 172	-14 697
Interest expense on financial instruments calculated using the effective interest rate method		
Financial liabilities at amortised cost	-6 565	-6 757
Hedging derivatives	-5 903	-5 277
Financial assets (negative interest rate)	-1	-1
Other	-5	-5
Interest expense on other financial instruments		
Financial liabilities held for trading	-1 641	-2 599
Of which economic hedges	-1 596	-2 546
Other financial liabilities at fair value through profit or loss	-62	-68
Net interest expense relating to defined benefit plans	5	10

- 'Interest income on financial instruments calculated using the effective interest rate method, Other': the decrease in interest income relates mainly to interest on cash balances with central banks. These cash balances with central banks are mostly financed using short-term liabilities, such as certificates of deposit and repos. The associated interest expense is recognised under 'Interest expense', under 'Financial liabilities at amortised cost'. The interest margin on this activity is limited. Over the past few years, several central banks in our core countries decided to increase the minimum amount of reserves to be maintained or to lower the compensation paid for these reserves. This had a negative impact on our net interest income of around 190 million euros in 2024 (126 million euros in 2023).
- At the end of August 2023, the Kingdom of Belgium issued a state note with a term of one year. For KBC, this resulted in a 5.7-billion-euro outflow of customer deposits in 2023. Thanks to our proactive, multi-phased and multi-product offer, in September 2024 we managed to attract a total of some 6.5 billion euros in core customer money in Belgium (deposits, savings certificates, funds, insurance, bonds, etc.), exceeding the 5.7-billion-euro outflow to the state note in September 2023 by 0.8 billion euros.

### Note 3.2: Dividend income

(in millions of EUR)	2024	2023
Total	57	59
Equity instruments MFVPL other than held for trading	2	0
Equity instruments held for trading	15	14
Equity instruments at FVOCI	39	44

### Note 3.3: Net result from financial instruments at fair value through profit or loss and Insurance finance income and expense (for insurance contracts issued)

(in millions of EUR)	2024	2023
Total	-168	9
Total broken down by type and IFRS portfolio		
Net result from financial instruments at fair value through profit or loss	173	322
<i>Financial instruments MFVPL other than held for trading</i>	1 679	1 250
<i>Trading instruments (including interest on non-ALM trading derivatives and fair value changes in all trading derivatives)</i>	202	134
<i>Other financial instruments at fair value through profit or loss</i>	-1 598	-1 103
<i>Foreign exchange trading</i>	108	155
<i>Fair value adjustments in hedge accounting</i>	-219	-113
Insurance finance income and expense (for insurance contracts issued)	-341	-313
Hedge accounting broken down by type of hedge		
Fair value micro-hedges	11	-2
<i>Changes in the fair value of the hedged items</i>	-269	-269
<i>Changes in the fair value of the hedging derivatives</i>	281	267
Cashflow hedges	0	-9
<i>Changes in the fair value of the hedging derivatives, ineffective portion</i>	0	-9
Hedges of net investments in foreign operations, ineffective portion	0	0
Portfolio hedge of interest rate risk	2	7
<i>Changes in the fair value of the hedged items</i>	469	1 029
<i>Changes in the fair value of the hedging derivatives</i>	-467	-1 022
Discontinuation of hedge accounting for fair value hedges	-131	-58
Discontinuation of hedge accounting in the event of cashflow hedges	-101	-52
Total broken down by driver		
Dealing room	294	288
Change in the value of derivatives used for asset/liability management purposes and other	-189	-47
Market value adjustments (xVA)	-24	-15
Investment result for unit-linked insurance contracts under IFRS 17 and Insurance finance income and expense	-249	-217

- Since 2024, 'Net result from financial instruments at fair value through profit or loss' and 'Insurance finance income and expense (for insurance contracts issued)' are shown on the same line, with retroactive restatement of the 2023 figures. This way, the change in fair value of liabilities of unit-linked contracts under IFRS 17 (variable fee approach) recognised under 'Insurance finance income and expense' is offset by the change in fair value of the underlying unit-linked assets, which is recognised under 'Net result from financial instruments at fair value through profit or loss'. The remaining amount primarily comprises interest accretion in 'Insurance finance income and expense' (see Note 3.6).
- ALM hedging derivatives (recognised in hedge accounting): the interest component of these derivatives is recognised under 'Net interest income'. Fair value changes in hedging derivatives, excluding those for which an effective cashflow hedge relationship exists, are recognised under 'Net result from financial instruments at fair value through profit or loss'. Under fair value hedge accounting, changes in the fair value of hedged assets are also recognised under this heading, and offsetting takes place insofar as the hedge is effective. ALM hedging derivatives not recognised in hedge accounting (and therefore classified as trading instruments) are treated in the same way, except most of the related assets are not recognised at fair value (i.e. not marked-to-market).
- Day 1 profit: when the transaction price in a non-active market differs from the fair value of other observable market transactions in the same instrument or from the fair value based on a valuation technique whose variables include only data from observable markets, the difference between the transaction price and the fair value (day 1 profit) is taken to profit or loss. If this is not the case (i.e. the variables do not include only data from observable markets), day 1 profit is reserved and is released in profit or loss during the life and until the maturity of the financial instrument. This day 1 profit involves limited amounts.
- Foreign exchange trading includes the realised and unrealised foreign exchange results (when the monetary assets and liabilities are revalued), regardless of the IFRS portfolio, except for financial assets and liabilities measured at fair value through profit or loss, for which the revaluation is included in the fair value correction. Note that (unrealised) foreign exchange gains/losses on insurance contract liabilities are recognised under 'Insurance finance income and expense (for insurance contracts issued)'.
- The effectiveness of the hedge is determined according to the following methods:
  - For fair value micro-hedging, we use the dollar offset method on a quarterly basis, with changes in the fair value of the hedged item offsetting changes in the fair value of the hedging instrument within a range of 80%–125%.
  - For cashflow hedges, we compare the designated hedging instrument with a perfect hedge of the hedged cashflows on a prospective (by BPV measurement) and retrospective basis (by comparing the fair value of the designated hedging instrument with the perfect hedge). The effectiveness of both tests must fall within a range of 80%–125%.
  - We use the rules set out in the European version of IAS 39 (carve-out) to assess the effectiveness of fair value hedges for a portfolio of interest rate risk. IFRS does not permit net positions to be reported as hedged items, but does allow hedging instruments to be designated as a hedge of a gross asset position (or a gross liabilities position, as the case may be). Specifically, we make sure that the volume of assets (or liabilities) in each maturity bucket is greater than the volume of hedging instruments allocated to the same bucket.

### Note 3.4: Net fee and commission income

(in millions of EUR)	2024	2023
Total	2 578	2 349
Fee and commission income	3 253	2 991
Fee and commission expense	-675	-642
Breakdown by type		
Asset management services	1 421	1 247
<i>Fee and commission income</i>	1 478	1 305
<i>Fee and commission expense</i>	-57	-59
Banking services	1 108	1 057
<i>Fee and commission income</i>	1 721	1 632
<i>Fee and commission expense</i>	-613	-575
Other	49	45
<i>Fee and commission income</i>	54	53
<i>Fee and commission expense</i>	-5	-8

- 'Asset management services' contains management fees, entry fees and distribution fees for investment funds and unit-linked life insurance under IFRS 9. 'Banking services' contains credit- and guarantee-related fees, payment transaction fees, network income, securities-related fees, distribution fees paid for banking products and fees for other banking services. Distribution fees paid for insurance products (Life and Non-life under IFRS 17) are recognised in the income statement under 'Insurance service expenses before reinsurance' (see Note 3.6). 'Other' comprises distribution fees of third-party insurers (not under IFRS 17) and platformisation income.
- The lion's share of the fees and commissions related to lending is recognised under 'Net interest income' (effective interest rate calculations).

### Note 3.5: Net other income

(in millions of EUR)	2024	2023
Total	181	656
of which gains or losses on		
Sale of financial assets measured at amortised cost	-36	-22
Sale of FVOCI debt instruments	2	-7
Repurchase of financial liabilities measured at amortised cost	0	0
Other, including:	215	685
<i>Income from operational leasing activities</i>	120	101
<i>Income from VAB Group</i>	47	39
<i>Legal disputes</i>	-28	-2
<i>Gain on sale of KBC Bank Ireland's loan and deposit portfolios</i>	0	405
<i>Gain on sale of a participation in Belgium</i>	0	18
<i>Recovery of Belgian bank and insurance tax from 2016 (incl. moratorium interest)</i>	0	48

- For information on the gain on the sale of KBC Bank Ireland's loan and deposit portfolios in 2023, see Note 6.6.
- Legal disputes: in 2024, this item mainly concerned Hungary.

## Note 3.6: Insurance results

### Note 3.6.1: Insurance profitability – P&L

- Unlike the group's income statement, the figures below include intragroup transactions between bank and insurance entities of the group (the results for insurance contracts concluded between the group's bank and insurance entities, interest that insurance companies receive on their deposits with bank entities, commissions that insurance entities pay to bank branches for sales of insurance, etc.) in order to give a more accurate view of the profitability of the insurance business.
- Of the items in Note 3.6.1, only 'Insurance revenues', 'Insurance service expenses', 'Insurance finance income and expense' and 'Net result from reinsurance contracts held' are presented on separate lines in the income statement (with a minor adjustment related to intercompany transaction eliminations between bank and insurance entities). As part of our integrated bank-insurance concept, all the other insurance items – together with the group's banking activities – are included in the income statement and related notes.

- The column 'of which Life direct participation (VFA)' relates to results of long-term unit-linked contracts in Central and Eastern Europe, measured under IFRS 17.
- 'Insurance finance income and expense, before reinsurance' includes:
  - interest accretion on the IFRS 17 insurance liabilities, which is offset by the investment result on the corresponding assets backing these liabilities;
  - changes in the fair value of underlying liabilities of insurance contracts measured under the VFA, which represents the change in the fair value of unit-linked liabilities, measured under IFRS 17 (Variable Fee Approach), with the offsetting impact in the change in the fair value of underlying unit-linked assets in 'Net result from financial instruments at fair value through P&L' (see also Note 3.3).
- 'Non-technical' includes the results from non-insurance subsidiaries, such as VAB Group and ADD. They have been included in the note for the 'insurance business' given that they are KBC Insurance subsidiaries (but as they cannot be recognised under 'Life' or 'Non-life', they are included under 'Non-technical'). 'Non-technical' also includes the investment income from equity (i.e. mainly interest income from bonds) and income tax.
- In 2024, the Non-life insurance service result was negatively impacted by higher Non-life claim-related expenses (-257 million euros). This was partly due to the impact of inflation, a sector-wide update of claims inflation on bodily injury claims, a higher level of standard claims and the increased impact of storms, mainly in the Czech Republic (storm Boris) and Belgium, having an impact of -133 million euros before reinsurance or -72 million euros after reinsurance (-29 million euros and -34 million euros, respectively, in 2023).

Note 3.6.2: Insurance profitability – other comprehensive income (OCI)

(in millions of EUR)	Life	<i>Of which Life direct participation (VFA)</i>	Non-life	Non-technical	Total
<b>2024</b>					
Investment result (OCI) on financial assets at FVOCI	74	0	-1	30	103
Change in Insurance finance income and expense – OCI, before reinsurance	-199	0	-26	–	-225
<i>Effect of changes in interest rates and other financial assumptions in OCI, incl. foreign exchange differences</i>	-199	0	-26	–	-224
<i>Changes in fair value of underlying liabilities of contracts measured under VFA – OCI</i>	0	0	–	–	0
<b>Net insurance and investment result before reinsurance – OCI</b>	<b>-125</b>	<b>0</b>	<b>-26</b>	<b>30</b>	<b>-122</b>
Change in reinsurance finance income and expense – OCI	0	–	0	–	0
Deferred taxes	–	–	–	75	75
<b>Net insurance and investment result after reinsurance, after tax – OCI</b>	<b>-125</b>	<b>0</b>	<b>-26</b>	<b>104</b>	<b>-47</b>
<b>2023</b>					
Investment result (OCI) on financial assets at FVOCI	594	1	49	0	644
Change in Insurance finance income and expense – OCI, before reinsurance	-538	-1	-23	–	-561
<i>Effect of changes in interest rates and other financial assumptions in OCI, incl. foreign exchange differences</i>	-537	0	-23	–	-560
<i>Changes in fair value of underlying liabilities of contracts measured under VFA – OCI</i>	-1	-1	–	–	-1
<b>Net insurance and investment result before reinsurance – OCI</b>	<b>56</b>	<b>0</b>	<b>25</b>	<b>0</b>	<b>82</b>
Change in reinsurance finance income and expense – OCI	0	–	7	–	7
Deferred taxes	–	–	–	13	13
<b>Net insurance and investment result after reinsurance, after tax – OCI</b>	<b>56</b>	<b>0</b>	<b>33</b>	<b>13</b>	<b>102</b>

- Note that there is a (partial) compensating effect between 'Investment result (OCI) on financial assets at FVOCI' and the 'Effect of changes in interest rates and other financial assumptions in OCI, incl. foreign exchange differences'.
- For more information on the investment result and the change in insurance finance income and expense: see 'Other comprehensive income'.
- In addition to the investment result of the financial assets recognised in profit or loss (Note 3.6.1) and in OCI (Note 3.6.2), results realised on FVOCI equity instruments are recognised directly in equity (see 'Transfer from revaluation reserves to retained earnings upon realisation' in 'Consolidated statement of changes in equity'). The corresponding figures for 2024 and 2023 were 40 million euros and 24 million euros, respectively, at insurance level of the 47 million euros and 21 million euros at group level.

### Note 3.6.3: Insurance revenues (Life and Non-life) by component

(in millions of EUR)		2024		2023		
	Total	Life	Non-life	Total	Life	Non-life
Insurance revenues for BBA and VFA contracts	472	432	39	406	370	36
Amounts related to changes in liabilities for remaining coverage	447	408	38	390	355	35
<i>Expected claims and other insurance service expenses</i>	262	232	29	226	200	25
<i>Change in risk adjustment for risk expired (non-financial risk)</i>	14	13	2	15	11	3
<i>CSM recognised for services provided</i>	170	163	7	150	143	6
Recovery of insurance acquisition cashflows	25	24	1	16	15	1
Insurance revenues for contracts measured using the PAA	2 483	31	2 452	2 284	30	2 255
Total insurance revenues	2 955	463	2 492	2 690	400	2 290

### Note 3.6.4: Life insurance sales

(in millions of EUR)		2024	2023
Total		2 906	2 328
IFRS 17 – non-unit-linked		1 214	975
IFRS 17 – unit-linked		158	171
IFRS 17 – hybrid		197	131
Non-IFRS 17		1 337	1 051

- Non-IFRS 17 sales figures mainly refer to investment contracts without discretionary participation features (DPF), measured under IFRS 9. They concern the unit-linked insurance contracts in Belgium, for which margins are reported under 'Net fee and commission income'.
- Hybrid products: see Note 5.6.1.
- Sales of life insurance products in 2024 went up by 25% compared to 2023, largely driven by unit-linked insurance contracts in Belgium (non-IFRS 17) as well as by further growth in non-unit-linked insurance contracts (mainly in Belgium).

### Note 3.6.5: Non-life insurance profitability by product (P&L)

(in millions of EUR)	Insurance revenues	Insurance service expenses	Insurance finance income and expense before reinsurance in P&L	Total before reinsurance	Net result from reinsurance contracts held	Total after reinsurance

## Note 3.7: Operating expenses

(in millions of EUR)	2024	2023
Total	-5 097	-5 125
Staff expenses	-2 708	-2 677
General administrative expenses		
<i>ICT</i>	-641	-634
<i>Facility expenses</i>	-250	-265
<i>Marketing and communications</i>	-111	-108
<i>Professional service fees</i>	-142	-144
<i>Bank and insurance tax</i>	-623	-687
<i>Other</i>	-240	-224
Depreciation and amortisation of fixed assets	-382	-386

- The table above contains the sum of 'Total operating expenses excluding bank and insurance tax' and 'Bank and insurance tax' from the income statement.
- The total expenses went down by 1% in 2024 compared to 2023.
  - This amount includes 623 million euros in bank and insurance tax, a 9% decrease year-on-year. This was partly due to lower contributions to the resolution fund (after reaching the target level of 1% of the covered deposits for the Single Resolution Fund in 2023, no contributions were made by euro area countries and only limited contributions were made by non-euro area countries), a lower contribution to the deposit guarantee schemes (mainly in Belgium, due to a lower-than-anticipated volume of covered deposits), partly offset by additional national bank taxes in a number of countries (primarily in Belgium and Slovakia).
  - Expenses excluding bank and insurance tax increased by 1% to 4 474 million euros. This was mainly attributable to inflation-related pressure on wages and higher ICT and regulatory expenses, and was only partly offset by, among other things, the positive impact of the sale of the Irish portfolios and lower facility expenses.
- Under 'Insurance service expenses', operating expenses are also allocated as 'directly attributable to insurance contracts'. For 2024, the operating expenses that are 'directly attributable to insurance contracts' are comprised of approximately 39% staff expenses, 57% general administrative expenses and 4% depreciation and amortisation of fixed assets.
- For information on the average number of persons employed, see Note 3.8; information on the remuneration of members of the Executive Committee and the Board of Directors is provided under 'Remuneration report' in the 'Corporate governance statement' section; details of the statutory auditor's remuneration (PwC) are provided in Note 6.4.
- Information on the capital increase reserved for KBC group employees can be found in the 'Company annual accounts and additional information' section. In 2024, this resulted in the recognition of a limited employee benefit (3 million euros) as the issue price in 2024 was lower than the market price. Information regarding the price of the KBC share can be found in the 'Report of the Board of Directors' section.

## Note 3.8: Personnel

(number)	2024	2023
Total average number of persons employed (in full-time equivalents)	38 074	38 609
By legal entity		
KBC Bank	27 872	28 708
KBC Insurance	4 120	4 067
KBC Group NV (holding company) and KBC Global Services NV (cost-sharing structure)	6 082	5 834
By employee classification		
Blue-collar staff	417	389
White-collar staff	37 400	37 960
Senior management	257	260

- The figures in the table are annual averages, which – in terms of scope – may differ from year-end figures that are provided elsewhere.

### Note 3.9: Impairment (income statement)

(in millions of EUR*)	2024	2023
Total	-248	-215
Impairment on financial assets at AC and at FVOCI (impairment on loans)	-199	16
By IFRS category		
<i>Financial assets at amortised cost</i>	-201	17
<i>Financial assets at fair value through OCI</i>	2	-1
By product		
<i>Loans and advances</i>	-224	-5
<i>Debt securities</i>	4	6
<i>Off-balance-sheet commitments and financial guarantees</i>	21	15
By type		
<i>Stage 1 (12-month ECL)</i>	-30	-41
<i>Stage 2 (lifetime ECL)</i>	162	160
<i>Stage 3 (lifetime ECL)</i>	-283	-92
<i>Purchased or originated credit impaired assets</i>	-49	-11
By business unit/country		
<i>Belgium</i>	-246	-82
<i>Czech Republic</i>	34	70
<i>International Markets</i>	25	19
<i>Slovakia</i>	18	8
<i>Hungary</i>	23	11
<i>Bulgaria</i>	-16	0
<i>Group Centre</i>	-12	8
Impairment on goodwill	0	-109
Impairment on other	-49	-122
Intangible fixed assets (other than goodwill)	-36	-77
Property and equipment (including investment property)	-2	-15
Associated companies and joint ventures	0	0
Other	-11	-30

\* Positive figures indicate a reversal and hence a positive impact on results

- Impairment on loans:
  - In 2024, this item included a partial reversal of 134 million euros related to the reserve for geopolitical and macroeconomic uncertainties (see below) and a net increase of 333 million euros for loans in the loan portfolio (of which a 72-million-euro reduction of the backstop shortfall for old non-performing loans in Belgium – see also the 'How do we manage our capital?' section);
  - In 2023, this item included a partial reversal of 155 million euros related to the reserve for geopolitical and macroeconomic uncertainties (see below) and a net increase of 139 million euros for loans in the loan portfolio;
  - The impact of the extreme weather conditions, including flooding and storms, in 2024 and 2023 on (impairment on) loans was insignificant.
- Impairment on goodwill:
  - In 2023, this item included 109 million euros related to ČSOB Stavební spořitelna (see below).
- Impairment on other:
  - In 2024, this item included impairment of software and modification losses related to the extension of the interest cap regulation in Hungary;
  - In 2023, this item included impairment of fixed assets (partly relating to the sale in Ireland) and software, and modification losses related to the extension/expansion of the interest cap regulation in Hungary;
- The loan portfolio accounts for the largest share of the financial assets. Based on internal management reports, the composition and quality of the loan portfolio is set out in detail in the 'How do we manage our risks?' section (under 'Credit risk'). All parts of that particular section which have been audited by the statutory auditor are specified in that section. Among other things, this section also provides more information on impaired loans (Stage 3).
- For information on total impairment recognised in the balance sheet, see Note 4.2.
- More background information and methodology for KBC's ECL model is provided in the accounting policies under 'Financial assets – impairment' in Note 1.2.

- In order to calculate ECL, KBC uses specific models for probability of default (PD), exposure at default (EAD) and loss given default (LGD). It is essential to take account of historical observations and forward-looking projections in this respect.
  - PD represents the probability of a counterparty defaulting in the next 12 months or during the entire term of the facility (depending on which IFRS 9 'Stage' the facility is in). The PD is determined by the counterparty's internal (and, if applicable, external) credit rating. Variables used in PD models include financial ratios and behavioural parameters (arrears).
  - EAD represents the estimated outstanding debt at the time of default and depends on the existing outstanding debt and any changes permitted under the contract and normal repayments. Variables used in these models include product types and repayment schedules.
  - LGD is the estimated size of the loss relative to the outstanding debt at the time of default. LGD is presented as a percentage of the outstanding debt and is determined by historical amounts recovered on similar claims. Variables used in these models include collateral types and financial ratios.
- On 31 December 2024, there were around 80 different IFRS 9 models. In addition to several group-wide models, we have separate PD, EAD and LGD models for each of our core countries. In accordance with the Basel grouping approach, we use the type of counterparty (private individuals, SMEs, companies, governments, etc.) to determine the scope of an IFRS 9 model. Each model allows for differentiation in terms of facility type (term loans, revolving facilities, etc.) and collateral type (mortgages, pledges on business assets, guarantees, etc.). Examples of IFRS 9 models include 'Banks', 'Belgian private persons – home loans', 'Czech corporates', 'Bulgarian corporates and SMEs' and 'Central governments'. Detailed documentation is available for each PD, EAD and LGD model. These models are periodically back-tested and, if necessary, redesigned. There was no material net impact on ECL from redesigned models in 2024. The main models are subject to review by external auditors. The Basel models, which the IFRS 9 models are based on, are subject to external control performed by the supervisory authorities.
- We create the models for the various portfolios using typical PD, EAD and LGD inputs, as well as macro- and microeconomic variables to the extent that there is a statistical relationship. The macroeconomic variables are GDP growth, the unemployment rate, policy interest rates, the exchange rate, government bond yields, house prices and inflation. Microeconomic variables include, for example, confidence indicators, the harmonised consumer price index (HICP), the producer price index (PPI), and so on. As a result of regular back-testing, models may change and economic variables may be reassessed. The following table gives the base-case scenario for the three key indicators (GDP growth, unemployment rate and house price index) for each of our core countries for the coming years. After that, we take into account a gradual linear transition towards a stable situation.

**Macroeconomic base-case scenario – key indicators  
(used for situation at year-end 2024)\***

	2024	2025	2026
Real GDP growth			
Belgium	1.0%	0.6%	0.9%
Czech Republic	1.0%	2.3%	2.3%
Hungary	0.4%	2.1%	3.1%
Slovakia	2.2%	2.0%	2.6%
Bulgaria	2.2%	2.1%	2.4%
Unemployment rate			
Belgium	5.8%	6.0%	5.9%
Czech Republic	2.9%	3.2%	3.1%
Hungary	4.6%	4.3%	3.9%
Slovakia	5.5%	5.5%	5.5%
Bulgaria	4.2%	4.2%	4.0%
House price index			
Belgium	2.9%	3.0%	3.0%
Czech Republic	3.9%	4.2%	3.5%
Hungary	7.0%	4.5%	4.0%
Slovakia	3.0%	3.0%	3.5%
Bulgaria	12.2%	5.0%	3.5%

\* This deviates from the (more recent) estimates provided in the 'Report of the Board of Directors', under the 'Market conditions in our core markets in 2024' and 'Our business units' sections.

- We use three different forward-looking macroeconomic scenarios (with different probability weightings) to measure ECL. The weightings at year-end 2024 were 60% for the 'base' scenario, 20% for the optimistic 'up' scenario and 20% for the pessimistic 'down' scenario. The forecast horizon is 30 years. A sensitivity analysis of the impact of these multiple economic scenarios on the collectively assessed ECL (i.e. without the ECL for individually assessed loans of 1.65 billion euros at the end of 2024 and 1.56 billion euros at the end of 2023) shows that the 'base' scenario generates an ECL of 0.81 billion euros (0.91 billion euros in 2023), which is 0.02 billion euros lower than for the 'down' scenario (0.07 billion euros in 2023) and 0.01 billion euros higher than for the 'up' scenario (0.03 billion euros in 2023). The assessed scenario-weighted collective ECL results (that were recognised) amounted to 0.81 billion euros (0.93 billion euros in 2023). These amounts include the ECL related to geopolitical and macroeconomic uncertainties.

Collectively assessed ECL by country (2024, in billions of EUR)	100% base-case scenario	100% optimistic scenario	100% pessimistic scenario
Total	0.81	0.79	0.83
Belgium	0.26	0.26	0.27
Czech Republic	0.27	0.27	0.27
Slovakia	0.08	0.08	0.08
Hungary	0.04	0.04	0.05
Bulgaria	0.15	0.14	0.15

- The management of ESG risks is an integral part of the Credit Risk Management Framework (CRMF; see 'How do we manage our risks?' (under 'Credit risk')). Dedicated processes have been developed focusing on the risk management of ESG-related credit risks, and in particular on identification measurement, risk appetite and follow-up. A detailed explanation of the Credit Risk Management Framework is provided in the 'ESG in credit risk management' section of the Risk Report, which is available at [www.kbc.com](http://www.kbc.com). The main elements of this management framework are as follows:
  - In order to identify ESG-related credit risks, we use the Environmental Risk Impact Map (ERIM) to assess the impact of various climate and environmental risk drivers on the credit risk profile. Additionally, regular thematic analyses are also carried out (so-called 'White Papers'). In the loan origination and review process, a sector-based environmental and social (E&S) heat map is used. This is a screening tool to identify the risks involved in the portfolio of loans to corporate entities and SMEs. For material credit files in scope of high E&S Risk sectors, an ESG assessment is performed at counterparty level.
  - In the context of risk quantification, specific measurement techniques are being developed to assess the impact of ESG risks on our loan portfolio. For example, KBC is exploring the possibility of assessing sectoral climate impacts on Probability of Default (PD) based on climate scenarios from the Network for Greening the Financial System (NGFS). The quantifiability of ESG-related risks will gradually increase with the improved availability of data and measurement methodologies.
  - As regards risk appetite, KBC aims to limit the adverse impact of its activities on the environment and society and to encourage a positive impact, based on a responsible lending culture, the principles of which are laid out in a group-wide sustainability policy. KBC's commitment to consider climate and environmental risks is reflected in standards and policies addressing credit risk. These standards and policies apply in every step of the credit process, including, for instance, in loan pricing and collateral valuation. Furthermore, climate-related Key Risk Indicators (KRIs) were introduced in the Risk Appetite Process. These KRI's are monitored on a semi-annual basis by the Group Lending Committee and integrated in the Climate Risk Dashboard.
- KBC is gradually incorporating climate-related risks in the ECL process. This is reflected in our commitment, as described above, to consider climate-related risks in our collateral valuation process and in the ESG assessment of the relevant counterparty. KBC is also looking into the possibilities of a portfolio approach, which involves studying new methods to determine any relationship between the expected evolution of the climate and credit risk. As stated above, KBC is investigating whether a practicable model can be built to assess sectoral climate impacts based on climate scenarios developed by the NGFS. At this stage of the investigation, it is too early to include any impacts in the accounting policies. Management has the ability to overrule the expected credit losses and to capture the growing insights into ESG and climate-related risks.

- Impairment on goodwill in 2023: ČSOB Stavební spořitelna (a subsidiary of ČSOB Czech Republic) is facing the impact of the reduction of the building saving state subsidy in the Czech Republic, which has a significant negative impact on future projected earnings. This created an impairment of 109 million euros on the total goodwill outstanding of 175 million euros (based on the exchange rate as at 31 December 2023). This goodwill was created in June 2019 during the full acquisition of ČSOB Stavební (the former ČMSS), partially through the revaluation of the group's existing 55% stake in ČMSS at that time, which resulted in a one-off gain of 82 million euros.
- Reserve for geopolitical and macroeconomic uncertainties (referred to as the 'reserve for geopolitical and emerging risks' up until year-end 2023): the outstanding balance of the ECL for geopolitical and macroeconomic uncertainties came to 117 million euros at year-end 2024; the corresponding figure at year-end 2023 was 256 million euros. This ECL is determined based on individual counterparties and sectors in our portfolio which are deemed to have incurred an increase in credit risk because they are either (°) exposed to the macroeconomic risks (e.g., high(er) inflation and interest rates, high(er) energy prices) or (°) indirectly exposed to ongoing military conflict, such as the one in Ukraine. The decline is largely attributable to the improved micro- and macroeconomic outlook and the reversal of a collective migration of 'Stage 1' positions to 'Stage 2' for positions whose credit risk has increased significantly, which are included in the standard staging assessment since the fourth quarter of 2024. At year-end 2023, 12 billion euros' worth of 'Stage 1' positions were collectively migrated to 'Stage 2'.

#### Note 3.10: Share in results of associated companies and joint ventures

(in millions of EUR)	2024	2023
Total	80	-4
Of which		
<i>IGLUU s.r.o.</i>	0	-7
<i>Bancontact Payconiq Company NV</i>	1	1
<i>Isabel NV</i>	78	3
<i>Payconiq International SA</i>	-	-3
<i>Batopin NV</i>	1	-3

- Impairment on (goodwill on) associated companies and joint ventures is included in 'Impairment' (see Note 3.9). The share in results of associated companies and joint ventures does not therefore take this impairment into account.
- The results in 2024 are mainly due to a one-off gain of 79 million euros related to Isabel NV.

### Note 3.11: Income tax expense

(in millions of EUR)	2024	2023
Total	-527	-778
By type		
Current taxes on income	-699	-532
Deferred taxes on income	173	-246
Tax components		
Result before tax	3 941	4 179
Income tax at the Belgian statutory rate	25.00%	25.00%
Income tax calculated	-985	-1 045
Plus/minus tax effects attributable to		
<i>differences in tax rates, Belgium – abroad</i>	168	234
<i>tax-free income</i>	64	117
<i>adjustments related to prior years</i>	-8	4
<i>adjustments to deferred taxes due to change in tax rate</i>	0	4
<i>unused tax losses and unused tax credits to reduce current tax expense</i>	4	9
<i>unused tax losses and unused tax credits to reduce deferred tax expense</i>	3	25
<i>reversal of previously recognised deferred tax assets due to tax losses</i>	-13	0
<i>liquidation of Exicon (formerly KBC Bank Ireland)</i>	318	-
<i>other (including non-deductible expenses)</i>	-78	-126

- For information on tax assets and tax liabilities, see Note 5.2.
- Taxes in 2024 were positively impacted by the imminent liquidation of Exicon (formerly KBC Bank Ireland) (see below), partly offset by an updated estimate of future taxable profits of the London branch (-9 million euros). Taxes in 2023 were positively impacted by an updated estimate of future taxable profits of the London branch (15 million euros).
- In 2023, income tax expense was negatively impacted by 36 million euros as the deductibility of the Belgian bank and insurance tax was reduced by 80%. The remainder of the tax deductibility (20%) has also been abolished as of 2024 (having an additional impact of 11 million euros in 2024).
- The government of the Czech Republic introduced a windfall tax, which will also apply to major banks and will be in force for the period 2023–2025. Any excess profits will be taxed at 79% (19% standard business tax, 60% windfall tax). As ČSOB in the Czech Republic did not make any excess profit in 2024 and 2023, no Czech windfall tax was due.
- On 14 December 2023, Belgium, where ultimate parent company KBC Group NV has its registered office, laid down the Pillar Two global minimum tax in statute and declared that it would take effect on 1 January 2024. Under these rules, KBC is required to pay top-up tax (in Belgium or abroad) on the profits of its subsidiaries and permanent establishments, which are taxed at an effective tax rate of less than 15%. Based on the 2024 results, the additional top-up tax will be around 20 million euros (mainly in the Czech Republic and in Bulgaria). The group has applied the temporary exception issued by the IASB in May 2023 relating to the accounting requirements for deferred taxes in IAS 12. The group will continue to monitor the effect of the Pillar Two legislation on its future financial performance.
- Liquidation of Exicon (formerly KBC Bank Ireland): following approval from the Irish Ministry of Finance in September 2023, the remaining positions of KBC Bank Ireland were transferred to KBC Bank's Dublin branch, which means the main hurdles to commencing the legal process of liquidating Exicon (formerly KBC Bank Ireland) were overcome. In the fourth quarter of 2024, the imminent liquidation resulted in the recognition of a deferred tax asset for KBC Bank NV of 318 million euros.
- The table on the next page shows the country-by-country reporting.

(in millions of EUR)	Average number of FTEs	Revenues from third-party sales <sup>1</sup>	Revenues from intra-group transactions with other tax jurisdictions <sup>2</sup>	Result before tax	Income tax accrued – current year	Income taxes paid on a cash basis	Retained earnings	Tangible assets other than cash and cash equivalents <sup>3</sup>	Government grants received

Countries with zero FTEs and whose figures are below 0.5 million euros (i.e. rounded to zero in the table) have been excluded.

1 Corresponds to 'Total income' in the income statement.

2 If this column contains a positive figure for a particular jurisdiction, it means that all group entities in that jurisdiction combined had more intra-group income than intra-group expenses compared with other tax jurisdictions. If the figure is negative, it means that all group entities in this jurisdiction combined had less intra-group income than intra-group expenses arising compared with other tax jurisdictions.

3 Corresponds to 'Property and equipment and investment property' in the balance sheet.

### Note 3.12: Earnings per share

(in millions of EUR)	2024	2023
Result after tax, attributable to equity holders of the parent	3 415	3 402
Coupon on AT1 instruments	-84	-64
Net result used to determine basic earnings per share	3 332	3 338
Weighted average number of ordinary shares outstanding (millions of units)	400	415
Basic earnings per share (EUR)	8.33	8.04

- Diluted earnings per share are currently almost the same as basic earnings per share.
- Number of ordinary shares outstanding is after deduction of shares repurchased (see 2023-2024 share buyback programme).

1. The carrying value comes close to the maximum credit exposure.

2. The amount of the reverse repos (before offsetting) is virtually identical to the amount of the underlying assets (that have been lent out).

3. The difference between 'Investment contracts (insurance)' and 'Liabilities under investment contracts' is accounted for by the presentation of non-unbundled investment contracts that are included under 'Investment contracts (insurance)' on the financial assets side, but are included under 'Insurance contract liabilities' on the liabilities side.

4. Financial assets not included under 'Loans and advances to customers' as they are not directly related to commercial lending.

5. The amount of the repos (before offsetting) is virtually identical to the amount of the underlying assets (that have been lent out), with the assets being partly reflected on the balance sheet and partly obtained through reverse repo transactions.

6. Financial liabilities not included under deposits from customers as they are not directly related to commercial deposit acquisition.

- 'Loans and advances to customers' also includes loans whose interest payments are linked to ESG targets of the client ('Sustainability-linked loans'). These are described in our 2024 Sustainability Report, in table 5.4 (this has not been audited). The contractual cashflows of these loans are deemed to be solely payments of principal and interest on the principal amount (SPPI), since the variability in interest payments resulting from the ESG component reflects the instrument's credit risk. For these loans, the margin on interest payments depends on whether or not the borrower meets the contractual ESG targets. These may be climate-related, environmental or social targets. This item also includes loans provided to clients which contribute to ESG targets. These are loans that fully or partially meet the EU Taxonomy criteria or the criteria of sustainability frameworks of other external parties, such as the European Investment Bank, the Loan Market Association (LMA) or local governments. These amounts are also described in our 2024 Sustainability Report, in table 5.5 (this has not been audited). The 'Debt securities' item also includes bonds purchased by KBC that were issued to finance investments containing a sustainability component. These bonds comply with the ICMA Green Bond Principles, the Social Bond Principles or the Sustainability Bond Guidelines. These amounts are also described in our 2024 Sustainability Report, in table 5.6 (this has not been audited).
- 'Deposits from credit institutions and investment firms' include the (remaining) funding obtained from the ECB's TLTRO programme. While this item still included an amount of 2.6 billion euros at year-end 2023, the remaining sum reached maturity in the first half of 2024.
- 'Non-convertible bonds' comprise mainly KBC Bank, KBC Group, ČSOB (Czech Republic) and KBC IFIMA issues. They are usually recognised under 'Measured at amortised cost'. However, if they contain closely related embedded derivatives, they are recorded under 'Designated at fair value' (see accounting policies). In 2024, these items also include three green bonds issued by KBC (for 500, 750 and 750 million euros each) and two social bonds (for 750 and 750 million euros each), which have been recognised at amortised cost. The purpose of these bonds is to fund loans to our clients intended for green or social projects; however, the cashflows of these bonds themselves are not linked to any ESG targets. More information on our Green Bond Framework and our Social Bond Framework is available at [www.kbc.com](http://www.kbc.com).
- More information on major new debt issues or redemptions is provided under the 'Consolidated cashflow statement'.
- The state note issued by the Kingdom of Belgium, with a term of one year and totalling 22 billion euros, matured in September 2024. This temporarily resulted in exceptional promotions offered by various banks in Belgium to secure the money invested in the state note. KBC managed to attract around 6.5 billion euros in core client money in September 2024 (6.0 billion euros in time deposits, 1.2 billion euros in savings certificates and 0.9 billion euros in other client money (investment funds, life insurance, etc.), partly offset by a shift of -1.6 billion euros in demand deposits and savings accounts), exceeding the 5.7-billion-euro outflow to the state note in September 2023. Please note that the relaunch of the savings certificate in Belgium means that this product is now part of 'Subtotal deposits from customers' with retrospective effect.
- Transferred financial assets that continue to be recognised in their entirety: KBC regularly lends and/or sells securities with the commitment to buy them back at a later date (repo transactions). Securities lent or sold with such a commitment are transferred to the counterparty, and, in exchange, KBC receives cash or other financial assets. However, KBC retains the main risks and income relating to these securities, and, therefore, continues to recognise them on its balance sheet. In addition, a financial liability is recognised equalling the cash or other financial assets received.

<b>Transferred financial assets that continue to be recognised in their entirety (carrying value, in millions of EUR)</b>	<b>31-12-2024</b>	<b>31-12-2023</b>
Transferred financial assets that continue to be recognised in their entirety: repo transactions and securities lent out	27 079	19 065
<i>Held for trading</i>	1 549	622
<i>Fair value through OCI</i>	4 866	1 172
<i>Amortised cost</i>	20 664	17 271
Associated financial liability	18 623	3 214
<i>Held for trading</i>	1 147	126
<i>Fair value through OCI</i>	3 439	183
<i>Amortised cost</i>	14 037	2 905

- KBC has more transferred financial assets on its balance sheet than repo transactions, due to the fact that the cash legs of certain repo transactions are offset against reverse repo transactions if they are carried out with the same counterparty, in the same currency and with the same maturity date. Moreover, there is a legally enforceable right, and an intention, to settle the transactions on a net basis or to realise the financial asset and settle the financial liability simultaneously.
- The loan portfolio accounts for the largest share of the financial assets. We report on estimated greenhouse gas emissions associated with lending and other activities and have defined objectives for reducing the greenhouse gas intensity of loans we have provided to, among others, electricity producers and the real estate sector, mortgage loans and loans provided for commercial residential real estate, as well as loans provided to the automotive industry and car leasing (see Note 6.2), the agricultural sector, and cement and steel producers. See 'Sustainability statement' in the 'Report of the Board of Directors' section for a more detailed explanation.

## Note 4.2: Financial assets and liabilities, breakdown by portfolio and quality

### Note 4.2.1: Impaired financial assets

(in millions of EUR)	Carrying value before impairment	Impairment	Carrying value after impairment

\* The carrying value after impairment in this note corresponds to the sum of the 'Loans and advances to credit institutions and investment firms (excl. reverse repos)', 'Loans and advances to customers (excl. reverse repos)' and 'Reverse repos' in Note 4.1 (in the 'Measured at amortised cost' column).

- Carrying value (before impairment) of loans and advances at amortised cost: increase of 3.6 billion euros in 2024, due primarily to:
  - an organic net increase in the loan portfolio (mainly mortgage loans and term loans);
  - a decrease in the carrying value of the reverse repos to credit institutions and investment firms.
- Carrying value (before impairment) of loans and advances at amortised cost in 'Stage 2': decrease of 17.4 billion euros in 2024, due primarily to:
  - the release of the migration to 'Stage 2' based on a collective approach of 'Stage 1' loans (see also Note 3.9) that have indirect exposure to military conflict, such as the one in Ukraine, and/or are vulnerable to geopolitical and macroeconomic risks (12.0 billion euros at year-end 2023).
  - In the first quarter of 2024, we initiated a combined net migration from 'Stage 2' to 'Stage 1' of loans with a gross carrying value of roughly 8.5 billion euros, resulting in a net release of 17 million euros in impairment. This was largely attributable to the introduction of the new multi-tier approach for assessing a significant increase in credit risk (see Note 1.2) and to a lesser extent to a migration of KBC Commercial Finance loans where the assessment of a significant increase in credit risk was updated based on the very low historical credit losses in this portfolio and the very short term of this type of loan. The aim of both adjustments is to better reflect the underlying credit risk after initial recognition.
  - Other factors explaining the decrease are mostly related to the continuous changes in staging of loans that have indirect exposure to military conflict, such as the one in Ukraine, and/or are vulnerable to geopolitical and macroeconomic risks, which are included in the standard staging assessment since the fourth quarter of 2024.
- Carrying value (before impairment) of debt securities at amortised cost: decrease of 1.3 billion euros in 2024, almost entirely in 'Stage 1'. This involves a movement of -1.4 billion euros in (issues by) public bodies and -0.2 billion euros for corporates, partly offset by +0.3 billion euros for credit institutions and related primarily to reinvestments of securities at maturity in the 'Financial assets at fair value through OCI' (FVOCI) category.
- Impairment: stable in 2024 compared to 2023:
  - due to derecognised financial assets, partly offset by changes in risk parameters (see Note 4.2.2).
- In 2024, 'Stage 2' and 'Stage 3' financial assets with a net carrying value of 474 million euros have been subject to modifications in 2024 that did not result in derecognition. The gross carrying value of financial assets moved back into 'Stage 1' this year that have been subject to modifications in the past that did not result in derecognition came to 683 million euros in 2024. The corresponding figures for 2023 were 579 million euros and 1 001 million euros, respectively. Modification gains or losses are recognised under impairment (see Note 3.9).
- In 2024, financial assets at amortised cost with a gross carrying value of 55 million euros were written off, but were still subject to enforcement activities; the corresponding figure for 2023 was 59 million euros.

1 Amounts recovered in respect of loans that have already been written off are recycled to the income statement and recorded as 'Impairment on financial assets at amortised cost and at fair value through OCI'. However, they have not been included in this table since they do not have any impact on impairment losses on the balance sheet.

2 Also includes impairment related to new financial assets resulting from off-balance-sheet commitments and financial guarantees already given being called.

3 Derecognition without an impact on results occurs when the impairment adjustment has already been made upfront (for example, at the moment of the sale agreement (disposals) or before the write-off). Derecognition with an impact on results occurs when the impairment adjustment takes place at the same time (for instance, in the case of debt forgiveness).

- The table is limited to impairment on loans and advances at amortised cost, as impairment and the movements in impairment on debt securities at amortised cost (from 12 million euros at year-end 2023 to 8 million euros at year-end 2024) and on debt securities at fair value through OCI (from 5 million euros at year-end 2023 to 4 million euros at year-end 2024) are very limited.
- For information on provisions for commitments and financial guarantees, see Note 5.7.2.
- For information regarding the impact of changes in impairment on the income statement, see Note 3.9.
- The loan portfolio accounts for the largest share of the financial assets. Based on internal management reports, the composition and quality of the loan portfolio is set out in detail in the 'How do we manage our risks?' section (under 'Credit risk'). All parts of that particular section which have been audited by the statutory auditor are specified in that section.

- Maximum credit exposure for a financial asset is the net carrying value. Besides the amounts on the balance sheet, maximum credit exposure also includes the undrawn portion of credit lines, financial guarantees granted and other irrevocable commitments.
- The main types of collateral and other credit enhancements received relate to mortgages on real estate (mainly collateral for mortgage loans), securities lent out (mainly as a collateral for reverse repos), off-balance-sheet financial guarantees received and collateral of movable property. Mortgage loans with an LTV (loan-to-value) greater than 100% are limited to 0.5 billion euros or 0.6% of the entire mortgage loan portfolio at year-end 2024.
- The loan portfolio accounts for the largest share of the financial assets. Based on internal management reports, the composition and quality of the loan portfolio is set out in detail in the 'How do we manage our risks?' section (under 'Credit risk'). All parts of that particular section which have been audited by the statutory auditor are specified in that section.
- Collateral and credit enhancements received are recognised at market value and limited to the outstanding amount of the relevant loans.

\* For central clearing houses, the offsetting procedure refers to the amount of offsetting between derivatives and related cash collateral. Cash collateral with central clearing houses amounted to 1 462 million euros at year-end 2024 and 1 842 million euros at year-end 2023.

- The criteria for offsetting are met if KBC currently has a legally enforceable right to set off the recognised financial assets and financial liabilities and intends either to settle the transactions on a net basis, or to realise the financial asset and settle the financial liability simultaneously. Financial assets and financial liabilities that are set off relate to financial instruments that were traded on (central) clearing houses.
- The amounts presented in the 'Financial instruments' column under the 'Amounts not set off in the balance sheet' heading are for financial instruments entered into under an enforceable master netting agreement or similar arrangement that does not meet the criteria defined in IAS 32. These amounts refer to situations in which offsetting can only be applied if one of the counterparties defaults, becomes insolvent or goes bankrupt. The same principle applies for financial instruments given or received as collateral. The value given in the table for non-cash collateral received (in the 'Securities collateral' column under the 'Amounts not set off in the balance sheet' heading) is the market value. This is the value that is used if one of the counterparties defaults, becomes insolvent or goes bankrupt.

- The difference between the fair value and the carrying value of the financial instruments at amortised cost (the unrealised losses, mainly on the debt securities portfolio) was caused by interest rate movements in 2024, 2023 and 2022. As a hold-to-collect business model is applied on the assets side, interim changes in fair value are less relevant. Taking into account i) KBC's large stock of high-quality liquid assets (approximately 101 billion euros on average in 2024), which consist of cash and bonds which can be repoed in the private market and at the central banks, ii) the fact that 56% of total customer deposits at KBC are covered by the Deposit Guarantee and iii) the fact that 86% of total customer deposits consist of more stable retail and SME clients, the unrealised losses on the debt securities portfolio at amortised cost do not need to be realised for liquidity purposes and are therefore irrelevant from a capital perspective.
- Also see the paragraph on the outlier stress test under 'Market risk in non-trading activities' in the 'How do we manage our risks?' section.
- All internal valuation models are validated by an independent Risk Validation Unit. In addition, the Executive Committee has appointed a Group Valuation Committee (GVC) to ensure that KBC meets all the legal requirements for measuring financial assets and liabilities at fair value. The GVC monitors consistent implementation of the KBC Valuation Framework, which consists of various guidelines, including the Group Valuation Policy, the Group Market Value Adjustments Policy and the Group Parameter Review Policy. The GVC meets at least twice a quarter to approve significant changes in valuation methods (including, but not limited to, models, market data and inputs) or deviations from group policies for financial assets and liabilities measured at fair value. The committee is made up of members from Finance, Risk Management and the Middle Office. Valuation uncertainty measurements are made and reported to the GVC every three months. Certain fair values generated by valuation models are challenged by a team set up specifically for this purpose.
- The fair value of mortgage and term loans not measured at fair value on the balance sheet (see table) is calculated by discounting contractual cashflows at the risk-free rate. This calculation is then adjusted for credit risk by taking account of margins obtained on similar, but recently issued, loans or by using a spread derived from the listed-bond spread. The fair value of the main portfolios takes account of prepayment risks and cap options. The fair value of time deposits is calculated by discounting contractual cashflows at the risk-free rate. The fair value of demand and savings deposits is presumed to be equal to their carrying value.
- As a result of the first-time adoption of IFRS 9 on 1 January 2018, debt instruments with a total carrying value of 15 060 million euros have been reclassified from 'Available-for-sale assets' to 'Financial assets held at amortised cost'. Due to this reclassification, changes in fair value (before tax) totalling 20 million euros were not recorded in the revaluation reserve in 2024 (35 million euros in 2023). The fair value of this reclassified portfolio (after redemptions) amounted to 1 761 million euros at year-end 2024 (2 808 million euros at year-end 2023).

- The fair value hierarchy prioritises the valuation techniques and the respective inputs into three levels:
  - The fair value hierarchy gives the highest priority to 'level 1 inputs'. This means that, when there is an active market, quoted prices have to be used to measure the financial assets or liabilities at fair value. Level 1 inputs are prices that are readily and regularly available from an exchange, dealer, broker, industry group, pricing service or regulatory agency (and that are quoted in active markets accessible to KBC). They represent actual and regularly occurring market transactions on an arm's length basis. The fair value is then based on a mark-to-market valuation derived from currently available transaction prices. No valuation technique (model) is involved.
  - If there are no price quotations available, the reporting entity establishes fair value using a model based on observable or unobservable inputs. The use of observable inputs must be maximised. Observable inputs are also referred to as 'level 2 inputs' and reflect the assumptions market participants would use in pricing the asset or liability based on market data obtained from sources independent of the reporting entity. Examples of observable inputs are the risk-free rate, exchange rates, stock prices and implied volatility. Valuation techniques based on observable inputs include discounted cashflow analysis, or reference to the current or recent fair value of a similar instrument.
  - Unobservable inputs are also referred to as 'level 3 inputs' and reflect the reporting entity's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions regarding the risks involved). Unobservable inputs reflect a market that is not active. For example, proxies and correlation factors can be considered to be unobservable in the market.
- When the inputs used to measure the fair value of an asset or a liability can be categorised into different levels of the fair value hierarchy, the fair value measurement is classified in its entirety into the same level as the lowest level input that is significant to the entire fair value measurement. For example, if a fair value measurement uses observable inputs that require significant adjustment based on unobservable inputs, that measurement is a level 3 measurement.
- The valuation methodology and the corresponding classification in the fair value hierarchy of the most commonly used financial instruments are summarised in the table. Whereas the majority of instruments of a certain type are within the level indicated in the table, a small portion may actually be classified in another level.
- KBC follows the principle that transfers into and out of levels of the fair value hierarchy are made at the end of the reporting period. Transfers between the various levels are dealt with in more detail in Note 4.6 and Note 4.7.

	<b>Instrument type</b>	<b>Products</b>	<b>Valuation technique</b>
Level 1	Liquid financial instruments for which quoted prices are regularly available	FX spots, exchange traded financial futures, exchange traded options, exchange traded stocks, exchange traded funds, liquid government bonds, other liquid bonds, liquid asset backed securities (ABS) in active markets	Mark-to-market (quoted prices in active markets), for bonds: BVAL or vendor data
Level 2	Plain vanilla/liquid derivatives	(Cross-currency) interest rate swaps (IRS), FX swaps, FX forwards, forward rate agreements (FRA), inflation swaps, dividend swaps and futures, reverse floaters, bond future options, interest rate future options, overnight index swaps (OIS), FX resets	Discounted cashflow analysis based on discount and estimation curves (derived from quoted deposit rates, FX swaps and (CC)IRS)
		Caps & floors, interest rate options, European stock options, European & American FX options, forward starting options, digital FX options, FX strips of simple options, European swaptions, European cancellable IRS	Option pricing model based on observable inputs (e.g., volatilities)
Level 2	Linear financial liabilities (without optional features) – cash instruments	Deposits, simple cashflows, repo transactions	Discounted cashflow analysis based on discount and estimation curves (derived from quoted deposit rates, FX swaps and (CC)IRS)
	Semi-liquid bonds/asset backed securities	Semi-liquid bonds/asset backed securities	BVAL, prices corroborated by alternative observable market data, or using comparable spread method
	Debt instruments	KBC IFIMA own issues (liabilities)	Discounted cashflow analysis and valuation of related derivatives based on observable inputs
	Linear financial assets (cash instruments)	Loans, commercial paper	Discounted cashflow analysis based on discount and estimation curves (derived from quoted deposit rates, FX swaps and (CC)IRS)
Level 3	Exotic derivatives	Target profit forwards, flexible forwards, American & Asian stock options, Bermudan swaptions, digital interest rate options, quanto interest rate options, digital stock options, composite stock options, barrier stock options, quanto digital FX options, FX Asian options, FX European barrier options, FX simple digital barrier options, FX touch rebates, inflation options, Bermudan cancellable IRS, constant maturity swaps (CMS), CMS spread swaps, CMS spread options, CMS interest rate caps/floors, (callable) range accruals, auto-callable options, lookback options, commodity swaps and forwards	Option pricing model based unobservable inputs (e.g., correlation)
	Illiquid credit-linked instruments	Collateralised debt obligations (notes)	Valuation model based on correlation of probability of default of underlying assets
	Private equity investments	Private equity and non-quoted participations	Based on the valuation guidelines of the European Private Equity & Venture Capital Association
	Illiquid bonds/asset backed securities	Illiquid (mortgage) bonds/asset backed securities that are indicatively priced by a single pricing provider in an inactive market	BVAL, third-party pricing (e.g., lead manager), where prices cannot be corroborated due to a lack of available/reliable alternative market data
	Debt instruments	KBC own issues (KBC IFIMA ), mortgage bonds held by ČSOB	Discounted cashflow analysis and valuation of related derivatives based on unobservable inputs (indicative pricing by third parties for derivatives)
	Structured loans	Government-regulated loans with leveraged interest rates and exotic early repayment options (K&H)	Discounted cashflow analysis and valuation of related derivatives based on unobservable inputs

#### **Note 4.6: Financial assets and liabilities measured at fair value – transfers between levels 1 and 2**

- In 2024, KBC transferred 201 million euros' worth of financial assets and liabilities out of level 1 and into level 2, and 445 million euros' worth of financial assets and liabilities out of level 2 and into level 1 (176 million euros and 286 million euros, respectively, in 2023). Most of these reclassifications were carried out due to a change in the liquidity of government bonds and corporate bonds.

#### **Note 4.7: Financial assets and liabilities measured at fair value – focus on level 3**

- In 2024, significant movements in financial assets and liabilities classified in level 3 of the fair value hierarchy included the following:
  - Financial assets measured at fair value through profit or loss (not held for trading): the fair value of loans and advances increased by 107 million euros, primarily on account of new transactions and changes in market inputs, partly offset by instruments that had reached maturity. The fair value of debt instruments rose by 55 million euros, due primarily to new purchases.
  - Financial assets at fair value through OCI: the fair value of debt instruments decreased by 36 million euros, primarily on account of shifts from level 3, partly offset by new purchases. The fair value of the equity instruments rose by 19 million euros, due mainly to new purchases, partly offset by the sale of existing positions.
  - Financial assets held for trading: the fair value of derivatives increased by 349 million euros, due mainly to changes in market inputs and new purchases, partly offset by the sale of existing positions.
  - Financial liabilities held for trading: the fair value of derivatives rose by 367 million euros, mainly on account of changes in market inputs and new transactions, partly offset by the settlement of existing positions.
  - Financial liabilities measured at fair value through profit or loss: the fair value of issued debt instruments decreased by 307 million euros, primarily on account of transactions that had reached maturity and the sale of existing positions, partly offset by new transactions and changes in market inputs.
  - Financial liabilities relating to hedging derivatives: the fair value of derivatives decreased by 43 million euros due to changes in market inputs.
- In 2023, significant movements in financial assets and liabilities classified in level 3 of the fair value hierarchy included the following:
  - Financial assets measured at fair value through profit or loss (not held for trading): the fair value of loans and advances increased by 210 million euros, primarily on account of new transactions and changes in market inputs, partly offset by instruments that had reached maturity.
  - Financial assets at fair value through OCI: the fair value of debt instruments decreased by 33 million euros, primarily on account of instruments reaching maturity and the sale of existing positions. The fair value of the equity instruments rose by 80 million euros, due primarily to purchases.
  - Financial assets held for trading: the fair value of derivatives decreased by 22 million euros, due mainly to the sale of existing positions, only partly offset by new purchases and changes in market inputs.
  - Financial liabilities held for trading: the fair value of derivatives decreased by 86 million euros, due mainly to the sale of existing positions and changes in market inputs, only partly offset by new transactions.
  - Financial liabilities measured at fair value through profit or loss: the fair value of issued debt instruments rose by 26 million euros, primarily on account of purchases and changes in market inputs, only partly offset by transactions reaching maturity and the sale of existing positions.
- Some level 3 assets are associated or economically hedged with identical level 3 liabilities, which means that KBC's exposure to unobservable inputs is lower than would appear from the gross figures. Most of the level 3 instruments are also valued using third-party pricing sources, with KBC not developing any unobservable inputs itself. The main unobservable inputs applied by KBC to the valuation of exotic derivatives include: mean reversion parameter on Bermudan swaptions, equity cross-correlations and volatilities for certain stock options, interest-rate correlations for CMS spread options, and the funding costs used to determine the forward equity prices as part of the valuation of certain equity derivatives. The change in fair value resulting from a change in these inputs to reflect reasonably possible alternative assumptions is insignificant.

## Note 4.8: Derivatives

- In terms of volume of the notional amounts of the derivatives, approximately 75% are trading derivatives and approximately 25% are hedging derivatives at year-end 2024 (the same as at year-end 2023).
- The majority of trading derivatives are effectively included in the trading book but are largely economically hedged (limited open positions) by other trading derivatives (such as derivative transactions initiated by commercial clients that are economically hedged) or by balance sheet positions (such as currency positions), which leads to large volumes of notional amounts but also to result-neutral revaluations on a net basis.
- A limited number of trading derivatives are ALM derivatives included in the banking book, which are used to hedge economic risk. These are not subject to hedge accounting. Hedge accounting is applied to most of the ALM interest rate contracts. Only a limited number of the ALM derivatives for foreign currencies are included in hedge accounting.

							92

<sup>1</sup> In this table, both legs of the derivatives are reported in the notional amounts.

<sup>2</sup> Ineffectiveness is recognised in Net result from financial instruments at fair value through profit or loss' (also see Note 3.3).

<sup>3</sup> Carrying value liabilities: hedging instruments mostly in the form of foreign currency deposits.

- The Treasury departments of the various entities manage the interest rate risk. To prevent rate movements from having a negative impact, the maturities of assets and liabilities are adjusted on the balance sheet using interest rate swaps and other derivatives.
- As regards the relationship between risk management and hedge accounting policy, 'economic' management takes priority and risks are hedged in accordance with the general ALM framework. Only then is a decision made on which, if any, of these techniques will be used to limit any resulting accounting mismatch.
- The balances remaining in the cashflow hedge reserve from any hedging relationships for which hedge accounting is no longer applied came to -187 million euros in 2024 (-322 million euros in 2023). The accumulated amount of fair value hedge adjustments remaining on the balance sheet for any hedged items that have ceased to be adjusted for hedging gains and losses amounted to -99 million euros in 2024 (-82 million euros in 2023). These adjustments are amortised to profit or loss.
- The difference between the 'Profit/loss on positions in portfolios hedged against interest rate risk' balance sheet item and accumulated fair value adjustments following portfolio hedges of interest rate risk as included in Note 4.8.2 is attributable to accumulated fair value adjustments regarding discontinued fair value hedges not included in Note 4.8.2 but included in the balance sheet.
- The accumulated fair value adjustments of the hedged assets involved in portfolio hedges of interest rate risk were less negative in 2024 due to the decrease in the risk-free rate and the unwinding effect of the negative accumulated fair value adjustment. The 'Profit/loss on positions in portfolios hedged against interest rate risk' balance sheet item on the liabilities side of the balance sheet was also less negative for the same reasons.
- Also see the paragraph on hedge accounting in the 'How do we manage our risks?' section and Note 3.3.

Total	1 911	1 691
Prepaid charges and accrued income	592	627
Other	1 320	1 064

### Note 5.2: Tax assets and tax liabilities

(in millions of EUR)	31-12-2024	31-12-2023
CURRENT TAXES		
Current tax assets	59	176
Current tax liabilities	121	99
DEFERRED TAXES	593	351
Deferred tax assets by type of temporary difference	1 382	1 134
Employee benefits	80	85
Losses carried forward	366	103
Tangible and intangible fixed assets	98	80
Provisions for risks and charges	18	19
Impairment for losses on loans and advances	212	207
Financial instruments at fair value through profit or loss and fair value hedges	86	92
Fair value changes, financial instruments at FVOCI, cashflow hedges and hedges of net investments in foreign operations	426	445
Insurance contract liabilities	33	36
Other, incl. reinsurance contracts	64	68
Deferred tax liabilities by type of temporary difference	789	784
Employee benefits	113	95
Losses carried forward	0	0
Tangible and intangible fixed assets	57	43
Provisions for risks and charges	9	9
Impairment for losses on loans and advances	3	3
Financial instruments at fair value through profit or loss and fair value hedges	85	76
Fair value changes, financial instruments at FVOCI, cashflow hedges and hedges of net investments in foreign operations	21	41
Insurance contract liabilities	452	467
Other, incl. reinsurance contracts	50	50
Recognised as a net amount in the balance sheet as follows:		
Deferred tax assets	942	724
Deferred tax liabilities	349	373
Unused tax losses and unused tax credits	95	117

- Deferred tax assets are recognised to the extent that it is probable that, on the basis of realistic financial projections, taxable profit will be available against which the deductible temporary differences can be utilised in the foreseeable future (limited to a period of eight to ten years).
- Unused tax losses and unused tax credits concern tax losses of group companies which are not capitalised due to insufficient proof of future taxable profit. Most tax losses and tax credits can be carried forward for 20 years or more.
- The net change in deferred taxes (+242 million euros in 2024) breaks down as follows:
  - The change in deferred tax assets of +248 million euros was primarily due to:
    - an increase in deferred tax assets via the income statement (+235 million euros), due mainly to losses carried forward (+263 million euros). This increase includes the recognition of a deferred tax asset for KBC Bank NV of 318 million euros relating to the imminent liquidation of Exicon (formerly KBC Bank Ireland) in the fourth quarter of 2024, partly offset by using deferred tax assets previously created due to taxable profits;
    - a decrease in deferred tax assets on account of changes in the revaluation reserve for financial instruments measured at fair value through OCI, cashflow hedges and hedges of net investments in foreign operations (-19 million euros).
  - The change in deferred tax liabilities of +6 million euros was accounted for chiefly by:
    - an increase in deferred tax liabilities for employee benefit liabilities mainly recorded through OCI (+17 million euros), tangible and intangible fixed assets (+14 million euros) and reinforced by financial instruments at fair value through profit or loss and fair value hedges (+9 million euros);
    - a decrease in deferred tax liabilities on account of changes in the revaluation reserve for financial instruments measured at fair value through OCI, cashflow hedges and hedges of net investments in foreign operations (-19 million euros);
    - a decrease in deferred tax liabilities for insurance contract liabilities (-15 million euros), with an amount of +64 million euros being recorded through OCI and -49 million euros being recorded via the income statement.
- The deferred tax assets presented in the balance sheet are attributable primarily to KBC Bank and ČSOB in the Czech Republic.

### Note 5.3: Investments in associated companies and joint ventures

(in millions of EUR)	31-12-2024	31-12-2023
Total	116	30
Overview of investments, including goodwill		
IGLUU s.r.o.	3	2

Gross amount	0	0
Accumulated impairment	0	0
Breakdown by type		
Unlisted	116	30
Listed	0	0
Fair value of investments in listed associated companies and joint ventures	0	0

- Associated companies are companies on whose management KBC exerts significant influence, without having direct or indirect full or joint control. In general, KBC has a 20% to 50% shareholding in such companies. Joint ventures are companies over which KBC exercises joint control.
- Goodwill paid on associated companies and joint ventures is included in the nominal value of 'Investments in associated companies and joint ventures' shown on the balance sheet. An impairment test is performed and, if required, the necessary impairment losses on goodwill are recognised (see table).
- For information on Isabel NV, see Note 3.10.

<i>Accumulated depreciation and impairment</i>	<i>1 585</i>	<i>479</i>	<i>915</i>	<i>2 979</i>	<i>308</i>
Fair value					733

- Annual rates of depreciation: mainly 3% for buildings (including investment property), 33% for IT equipment, between 5% and 33% for other equipment. No depreciation is charged for land.
- There was a small amount (around 0.2 billion euros) for commitments for the acquisition of property and equipment. There are no material restrictions on title, or on property and equipment pledged as security for liabilities.
- Most investment property is valued by an independent expert on a regular basis and by in-house specialists on an annual basis, based primarily on the capitalisation of the estimated rental value and on unit prices of similar real property. Account is taken of all the market inputs available on the date of the assessment (including location and market situation, type of building and construction, state of repair, use, etc.).
- Certain other investment property is valued annually by in-house specialists based on the current annual rental per building and expected rental movements and on an individual capitalisation rate per building.
- The impact of the heavy flooding and other extreme weather conditions in 2024 and 2023 on property and equipment and investment property (in this case, our branch network) and on the associated impairment was insignificant. For information regarding climate-related and other ESG risks, see the 'Sustainability statement' section.
- The impact of our own activities as a bank-insurer on the environment is very limited, especially when compared to industrial companies and our indirect impact through lending and other activities, and stems mainly from our buildings and vehicles (commuting). We nevertheless also calculate our own direct greenhouse gas impact and apply certain targets in that regard. See 'Sustainability statement' in the 'Report of the Board of Directors' section for a more detailed explanation. More details can also be found in our Climate Report and our Sustainability Report at [www.kbc.com](http://www.kbc.com).
- 'Other equipment' mostly comprises full service vehicle leases (mainly cars and bicycles) under operating leases. The other movements in 'Other equipment' mainly concern depreciation of these assets, recognised under 'Net other income' in the income statement.

## Note 5.5: Goodwill and other intangible assets

(in millions of EUR)	Goodwill	Software developed in-house	Software developed externally	Other	Total

- Goodwill: includes the goodwill paid on companies included in the scope of consolidation and relating to the acquisition of activities. Goodwill paid on associated companies: included in the nominal value of 'Investments in associated companies' shown on the balance sheet.
- Impairment testing: a test was carried out to establish whether impairment on goodwill had to be recognised (see table and Note 3.9). This impairment test is performed at least once a year. We also carry out a high-level assessment on a quarterly basis to see whether there is an indication of impairment. In the test, each entity is regarded as a separate cash-generating unit. This is because each entity has a specific risk profile and it is rare to have different profiles within a single entity.
- Impairment on goodwill under IAS 36: recognised in profit or loss if the recoverable amount of an investment is lower than its carrying value. The recoverable amount is defined as the higher of the value in use (calculated based on discounted cashflow analysis) and the fair value (calculated based on multiple analysis, etc.) less costs to sell.
- The main group companies to which goodwill relates are listed in the table. All of these companies have been valued using the discounted cashflow method. The discounted cashflow method calculates the recoverable amount of an investment as the present value of all future free cashflows of the business. This method is based on long-term projections about the company's business and the resulting cashflows (i.e. projections for a number of years ahead and the residual value of the business at the end of the specific projection period). These long-term projections are the result of an assessment of past and present performances combined with external sources of information on future performances in the respective markets and the global macroeconomic environment. Consequently, in cases where sustainability aspects and products/projects have been factored into the underlying financial projections, this will also affect the valuation. The ultimate growth rate is determined using a long-term average market growth rate. The present value of these future cashflows is calculated using a compound discount rate which is based on the capital asset pricing model (CAPM). A country-specific risk-free rate and a market-risk premium (multiplied by an activity beta) are also used in the calculation. KBC has developed two distinct discounted cashflow models, viz. a bank model and an insurance model. Free cashflows in both cases are the dividends that can be paid out to the company's shareholders, account taken of the minimum capital requirements.

Goodwill outstanding (in millions of EUR)	Discount rates throughout the specific period of cashflow projections			
	31-12-2024	31-12-2023	31-12-2024	31-12-2023
K&H Bank	169	181	14.7% – 13.5%	15.2% – 13.7%
ČSOB (Czech Republic)	248	252	12.7% – 12.6%	13.0% – 12.8%

Rest	42	42	–	–
Total	1 221	1 240	–	–

- The period to which the cashflow budgets and projections relate is 10 years in most cases. This longer period is used to take account of current strong growth in the Central and Eastern European countries, where the growth rate is expected to develop towards a more moderate level in the longer term.
- The growth rate used to extrapolate the cashflow projections after that period is equal to the expected long-term growth rate of the gross domestic product. This rate depends on the country and varied between 3.2% and 4.7% in 2024 (between 3.2% and 4.7% in 2023).
- For all entities, at year-end 2024 the recoverable amount exceeded the carrying value to such a large extent that no reasonably possible change in the key assumptions would result in the recoverable amount being less than or equal to the carrying value.

- Insurance contract liabilities relate to insurance contracts and investment contracts with a discretionary participation feature (DPF). Liabilities under investment contracts without DPF are measured at fair value. They concern unit-linked contracts, which are recognised under financial liabilities (see Note 4.1).
- LRC (except PAA) is calculated using various assumptions. Judgement is required when making these assumptions and they are based on various internal and external sources of information. These liabilities are generally calculated using assumptions that were applicable at the inception of the insurance contracts and as such determine the CSM at initial recognition. The key assumptions are:
  - Lapse and dormancy rates at both contract and premium level, as well as mortality and morbidity rates, based on standard mortality tables and adapted where necessary to reflect the group's own experience.
  - Operating expense assumptions which reflect the projected costs of maintaining and servicing in-force policies and associated overhead expenses which are considered directly attributable. Expenses are considered directly attributable if they are incurred as a consequence of performing insurance activities for in-force contracts;
  - Assumptions may vary depending on the type of insurance, the generation of contracts (mainly the time when the contract is entered into and the applicable terms and conditions) and the country, making it impossible to quantify these assumptions for the entire group.
- Assumptions for LIC are based on past claims experience relating to claim numbers, claim payments and claims handling costs, and adjusted to take account of such factors as anticipated market experience, claims inflation and external factors such as court awards, legislation and discounting.

- For contracts providing multiple services, i.e. insurance coverage, investment return services and investment management services, 'multivariate coverage units' are used, taking into consideration that (a) coverage units are determined based on the individual benefit components separately and (b) weights are assigned to each component to reflect an appropriate level of service to be provided. Such weightings appropriately reflect the release of CSM based on the quantity of the benefits provided for each service. Analogous to coverage units, these weights are also reassessed at the end of each reporting period.
- Coverage units have a positive value and are floored to zero. In case of zero coverage units in a given period, no CSM is allocated to P&L as no services have been provided in the period. This is possible, for instance, where contracts provide for 'waiting periods'. In such cases, the contract has been signed by the policyholder but there is a mandatory waiting period for the client to be able to benefit from insurance coverage.
- Defining IFRS 17 portfolios is a local decision, made by each insurance entity of KBC Group. It is country-specific, driven by the local product mix and the way in which the insurance business is managed locally. The table presents a high-level breakdown by product.
- Within hybrid products, the policyholder can switch within the same contract, containing the coverage of significant insurance risk, from the unit-linked to the non-unit-linked component and vice versa.
- Non-life LRC BBA (196 million euros in 2024, 190 million euros in 2023) represents the LRC health insurance (as part of personal insurance) as they are mostly long-term contracts and are therefore measured according to the BBA. Non-life LIC PAA for personal insurance (638 million euros in 2024, 594 million euros in 2023) represents the incurred claims under personal insurance with regard to 'workmen's compensation' insurance, which are typically settled over a long period.
- Most reinsurance programmes protect against the impact of exceptionally large loss events or accumulation of losses. Therefore, the reinsurance result is not in the same order of magnitude as the direct insurance result, which means the movements in reinsurance contract assets are limited.
- Current account transactions with intermediaries and reinsurers are not included in the measurement of insurance liabilities but treated as a separate asset measured under IFRS 9.
- The following yield curves are used to discount cashflows that do not vary based on the returns of underlying items. As these bottom-up discount curves are not entity-specific but currency-dependent, two curves are included for each currency, one with Solvency II volatility adjustment and one without (the latter is used for VFA liabilities; the former is used for all other liabilities for which bottom-up curves are used).

**Yield curve used to discount cashflows not varying based on underlying items; bottom-up method (forward rates)**

- In the transition from IFRS 4 to IFRS 17 on 1 January 2022, KBC applied the Full Retrospective Approach (FRA) for recent years. Applying the FRA for non-recent years was impracticable due to either a lack of historical data (data and hypotheses) or high costs associated with making information from the past available for FRA transition calculations. Where the FRA was impracticable, the Fair Value Approach (FVA) was predominantly used to determine the CSM on the transition date. The Modified Retrospective Approach (MRA) was rarely applied as this transition approach was overly complex and the costs did not outweigh the benefits. KBC calculated a fair value according to IFRS 13 based on the IFRS 17 cashflows and subsequently adjusted a few assumptions or parameters. The adjustments related to the inclusion in the IFRS 13 fair value of total expenses, i.e. including non-directly attributable expenses, and to the inclusion of a risk premium that covers not only non-financial risk, but also system and integration expenses and capital funding costs. All past years were combined into a single cohort for the FVA transition calculations. The FVA CSM ensued from cost and risk margin differences under IFRS 17 and IFRS 13 measurement approaches. Due to the application of the FVA on the transition date in accordance with the transition exemptions provided in IFRS 17, the OCI amount was set at nil.
- Movement in insurance liabilities in 2024:
  - Due to the further decrease in market interest rates during 2024, an expense in OCI of 199 million euros before tax is recognised as KBC made the accounting policy choice for all portfolios within the group to disaggregate insurance finance income and expense between P&L and OCI.
  - The movement in the investment component of 2 591 million euros from LRC to LIC indicates the amounts of contracts coming at maturity or lapsed and includes 866 million euros resulting from the surrender in 2024 of individual pension agreements from the 'Risk and Savings' portfolio in order to migrate them to the 'Hybrid products' portfolio as the policyholders of the relevant contracts were given the opportunity to invest in unit-linked products.
- Movement in insurance liabilities in 2023:
  - Due to the decrease in market interest rates during 2023, an expense in OCI of 538 million euros before tax is recognised as KBC made the accounting policy choice for all portfolios within the group to disaggregate insurance finance income and expense between P&L and OCI.
  - The movement in the investment component of 1284 million euros from LRC to LIC indicates the amounts of contracts coming at maturity or lapsed.
- On transitioning to IFRS 17, KBC applied mainly the fair value approach. Therefore, the amortised acquisition costs are low as they are not estimated under the fair value approach (i.e. the prospective approach).
- The Life insurance contracts are typically long-term contracts and are therefore measured according to the BBA or VFA. The latter is only applied within Central and Eastern European entities for unit-linked contracts or hybrid products as these sold contracts mandatorily contain insurance risk cover.
- Some insurance contracts may specify amounts that are payable when no insured event occurs, and are repayable under all circumstances and as such include an investment component. For defining the investment component, an investigation based on the contract's characteristics needs to be conducted. Within KBC, only investment components are identified within Life insurance, such as life-long death cover. When an insurance contract allows surrender, the gross surrender value is considered an investment component. Any associated surrender fees resulting from surrender are considered insurance components.

- In Non-life, KBC applies mostly the PAA, as the coverage period is 1 year or less.
- The cost of outstanding claims is based on the past claims development experience to project future claims development. These methods extrapolate the development of paid and incurred losses, average costs per claim (including claims handling costs) and claim numbers based on the observed claim development of earlier years and expected loss ratio. Historical claims are mainly analysed per accident year. Large claims are separately addressed.
- Estimates of salvage recoveries and subrogation reimbursement are considered in the measurement of the ultimate claim costs.
- No asset for insurance acquisition cashflows is currently recognised.

- The amount recognised in P&L as release of the CSM is determined by:
  - Identifying the coverage units in the group. The number of coverage units in a group is the quantity of service provided by the insurer under the contracts in that Group of Contracts (GoC), determined by considering for each contract the quantity of the benefits provided to the policyholder under a contract and its expected coverage period.
  - Allocating the CSM at the end of the period equally to each coverage unit provided in the current period and expected to be provided in the future, and recognising in P&L the amount allocated to coverage units allocated to the current period.
- Main movements in 2024 and 2023: the 43-million-euro increase in the risk adjustment in 2024 is mostly related to a model change to take into account the risk that clients stop paying premiums for long-term life insurance contracts. The movement of the contractual service margin in 2024, under 'New business', includes a 96-million-euro increase related to the migration of individual pension agreements from the 'Risk and Savings' portfolio to the 'Hybrid products' portfolio (see also Note 5.6.2). There were no material changes in 2023.

Note 5.6.5: Movements in Non-life insurance contract liability components (BBA)

<b>Closing balance</b>	<b>8</b>	<b>71</b>	<b>52</b>	<b>74</b>	<b>206</b>

- In Non-life, the BBA is applied to 'individual health insurance'.
- The decline recognised in insurance finance income and expense through OCI of 48 million euros in 2023 is accounted for by the increase in the discount curve in the long term (more than 20 years). The 6-million-euro increase in 2024 is attributable to

a slight decline in the yield curve. A typical feature of the hospitalisation portfolio is that interest rate movements have a greater impact on the cash outflows than on the cash inflows. Hospitalisation premiums are levelled (constant 'cash in' during the lifetime of the contract) and claims increase as the insured person ages ('cash out' more towards the end of the contract).

- The 52-million-euro drop in the present value of future cashflows for changes in estimates reflected in the CSM in 2024 is due to a model update in which expected higher claims result in higher premiums. A higher premium volume generates more future profit and, as a result, lower fulfilment cashflows. The 58-million-euro increase in changes in estimates reflected in the CSM in the risk adjustment in 2024 was accounted for by a model change involving a more conservative estimate of the uncertainty of claim costs related to hospitalisation.

#### Note 5.6.6: New business (BBA/VFA)

(in millions of EUR)	(Re)insurance contracts issued		(Re)insurance contracts acquired		Total
	Not onerous	Onerous	Not onerous	Onerous	
<b>2024</b>					
Estimates of present value of cash outflows	2 942	625	0	0	3 567
<i>Expected claims</i>	2 645	593	0	0	3 238
<i>Expected other insurance service expenses</i>	151	19	0	0	170
<i>Insurance acquisition cashflows</i>	145	13	0	0	159
Estimates of present value of cash inflows	-3 218	-614	0	0	-3 833
Risk adjustment for non-financial risk	29	3	0	0	32
Contractual service margin	248	—	0	—	248

<b>2023</b>					
Estimates of present value of cash outflows	1 194	212	0	0	1 406
<i>Expected claims</i>	1 034	171	0	0	1 205
<i>Expected other insurance service expenses</i>	63	19	0	0	82
<i>Insurance acquisition cashflows</i>	97	22	0	0	119
Estimates of present value of cash inflows	-1 378	-207	0	0	-1 585
Risk adjustment for non-financial risk	16	2	0	0	18
Contractual service margin	166	—	0	0	166
Increase in insurance contract liabilities: loss component	—	7	—	0	7

- 'Estimates of present value of cash outflows' includes 866 million euros resulting from the surrender in 2024 of individual pension agreements from the 'Risk and Savings' portfolio in order to migrate them to the 'Hybrid products' portfolio as the policyholders of the relevant contracts were given the opportunity to invest in unit-linked products. The net impact of this migration on the CSM is a 96-million-euro increase (see also Note 5.6.2).
- The sale of business with a loss component in 2024 was largely attributable to commercial campaigns in response to the Belgian state note maturing in September 2024. This new business was created with a market-driven competitive guaranteed interest rate (see also Note 4.1).

#### Note 5.6.7: Future CSM recognition in profit and loss on insurance contracts (at the end of the reporting period) (BBA/VFA)

(in millions of EUR)	CSM recognition in P&L in the ... following reporting year						
	1st year	2nd year	3rd year	4th year	5th year	6-10th year	+10th year
<b>2024</b>							
Life	153	145	138	132	126	548	1 023
Non-life	7	7	7	6	6	27	57
<b>2023</b>							
Life	149	142	135	129	122	529	973
Non-life	6	6	6	6	5	24	51

- The table shows the future CSM recognition for the next 25 years.

#### Note 5.6.8: Fair value of assets backing insurance and investment contracts

(in millions of EUR)	Life	Of which Life direct participation (VFA)	Non-life	Non-technical	Total
<b>2024</b>					
Total (underlying) assets	30 414	967	4 204	1 845	36 463
At amortised cost	1 886	0	2 887	1 047	5 819

Equity instruments	1 055	0	228	220	1 504
At FVPL (excl. derivatives)	16 666	951	0	8	16 673
Instruments backing unit-linked contracts	16 602	951	—	—	16 602
Other	64	0	0	8	71
At FVO	0	0	0	0	0
Property and equipment and investment property	109	0	97	198	403
<b>2023</b>					
Total (underlying) assets	27 930	928	4 152	1 686	33 769
At amortised cost	1 949	0	2 926	882	5 757
At FVOCI	11 490	15	1 158	590	13 238
Debt securities	10 441	15	933	386	11 759
Equity instruments	1 050	0	225	204	1 479
At FVPL (excl. derivatives)	14 364	913	0	8	14 372
Instruments backing unit-linked contracts	14 348	912	—	—	14 348
Other	16	1	0	8	24
At FVO	0	0	0	0	0
Property and equipment and investment property	127	0	68	207	401

- The table also includes the assets backing the liabilities under investment contracts (IFRS 9).

#### Note 5.6.9: Changes in accumulated OCI for FVOCI assets related to insurance contracts for which the fair value transition approach is used

(in millions of EUR)	2024	2023
OCI that may be recycled to P&L	-26	340
Net change in revaluation reserve (FVOCI debt instruments)	-26	340
Fair value adjustments before tax	-33	446
Deferred tax on fair value changes	9	-108
Transfer from reserve to net result	-1	2
Impairment	-2	2
Net gains/losses on disposal	0	0
Deferred taxes	0	-1
OCI that will not be recycled to P&L	101	110
Net change in revaluation reserve (FVOCI equity instruments)	101	110
Fair value adjustments before tax	101	110
Deferred tax on fair value changes	0	0

- IFRS 17 allows simplifications to set the accumulated OCI for the insurance liabilities at nil at the transition date while maintaining the accumulated OCI for the covering financial assets. This disclosure gives insight into the mismatch between covering financial assets and insurance liabilities as it distorts classification within equity at transition date and subsequently the years thereafter until the portfolio subject to the transition approach reaches maturity.
- See also 'Consolidated statement of comprehensive income'.

## Note 5.7: Provisions for risks and charges

- For most of the provisions recorded, no reasonable estimate can be made of when they will be used.
- Other provisions include those set aside for miscellaneous risks.
- Information relating to the main legal disputes pending: claims filed against KBC group companies are – in keeping with IFRS rules – treated on the basis of an assessment of whether they will lead to an outflow of resources (i.e. ‘probable outflow’, ‘possible outflow’ or ‘remotely probable outflow’). Provisions are set aside for ‘probable outflow’ cases (see ‘Notes on the accounting policies’). No provisions are constituted for ‘possible outflow’ cases, but information is provided in the financial statements if such cases might have a material impact on the balance sheet (i.e. when the claim could lead to a possible outflow of more than 50 million euros). All other claims (‘remotely probable outflow’), of whatever magnitude, that represent a minor or no risk at all do not have to be reported. The most important cases are listed below. The information provided is limited in order not to prejudice the position of the group in ongoing litigation.
  - Possible outflow: on 6 October 2011, Irving H. Picard, trustee (the ‘trustee’) for the liquidation of Bernard L. Madoff Investments Securities LLC (& Bernard L. Madoff), sued KBC Investments Ltd (a full subsidiary of KBC Bank) before the bankruptcy court in New York to claw back approximately 110 million US dollars’ worth of transfers made to KBC entities by Madoff (through a feeder fund that KBC had lent to Harley International). This claim is just one of a whole set made by the trustee against several banks, hedge funds, feeder funds and investors (‘joint defense group’). A lengthy litigation process was conducted on the basis of preliminary objections in respect of the applicability of the Bankruptcy Code’s ‘safe harbor’ and ‘good defenses’ rules, as well as prudential limitations on U.S. courts’ powers in international cases, to subsequent transferees (as is the case for KBC Investments Ltd), as detailed in previous disclosures. In June 2015, the Trustee stated his intention to amend the original claim which led to increase the amount claimed to USD 196 000 000. A court ruling dismissing the claim of the Trustee was issued on 3 March 2017. The Trustee appealed and the appellate court (Court of Appeals for the Second Circuit) reversed the dismissal on 28 February 2019. A certiorari petition filed on 30 August 2019 was dismissed by the US Supreme Court on 2 June 2020. As a consequence the merits of the case are handled by the Bankruptcy Court. On 30 August 2021, in two other appeals by other defendants, the Court of Appeals for the Second Circuit reversed the burden of proof from an initial burden on the Trustee to adequately demonstrate the defendant’s lack of good faith to a burden on the defendant to prove its good faith. On 1 August 2022, the Bankruptcy Court issued a decision determining the structure of the proceedings. In this context, on 5 August 2022 the Trustee amended his complaint by reducing his claim to a principal of USD 86 million. On 18 November 2022, KBC submitted a motion to dismiss the amended complaint for lack of specific jurisdiction of the US court. On 26 April 2023, the court dismissed this motion contesting jurisdiction. The proceedings on the merits will therefore continue. On 28 June 2023, KBC filed an answer to the amended complaint. An investigation of the facts will be concluded on 22 September 2025. Despite the increased burden of proof, KBC still believes it has good and credible defenses, including demonstrating its good faith. The procedure may still take several years.

## Note 5.8: Other liabilities

(in millions of EUR)	31-12-2024	31-12-2023

<b>DEFINED CONTRIBUTION PLANS</b>		
Expenses for defined contribution plans	-14	-18

- Retirement benefits that are actively accrued for the Belgium-based staff of KBC Bank, KBC Insurance and most of their Belgian subsidiaries are accrued exclusively through the KBC pension fund. Up until year-end 2018, employer-funded retirement benefits had accrued primarily through a defined benefit plan, where the benefit is calculated based on the final salary of employees before they retire, the number of years they had been in the plan and a formula that applies a progressive rate scale. A defined contribution plan was introduced on 1 January 2014 for all new employees and any employees who had chosen to switch to it. In this plan, a contribution is deposited based on the current monthly salary and the amounts deposited are paid out together with the (guaranteed) return on retirement. Both types of pension plan are managed by the KBC pension fund, which uses the services of KBC Asset Management for the investment strategy. In addition, there are a number of smaller, closed group insurance schemes from the past that will continue to be funded and are managed by the KBC pension fund. On 1 January 2019, a new defined contribution plan was introduced to replace the one introduced in 2014. All employees were again given the one-time option of switching from the defined benefit plan to the new defined contribution plan. At year-end 2024, 48% of employees were active participants in the defined benefit plan and 52% in the defined contribution plan (the corresponding figures at year-end 2023 were 52% and 48%).
- The expected age of retirement of each employee and the expected wage inflation based on an inflation curve derived from the market value of inflation-linked bonds are taken into account in the calculation of the gross defined benefit obligations.
- Since 1 January 2020, the insurance risks related to death and disability are fully reinsured through an external reinsurance programme.
- The KBC Pension Fund believes in a balanced ESG approach that allows improvement of the greenhouse gas intensity but also considers other environmental themes such as biodiversity and social and governance-related issues. As regards the management of the assets, the share of responsible investments came to around 89% at year-end 2024 (89% at year-end 2023). The aim is for the KBC Pension Fund investment portfolio to be carbon-neutral by 2050. At the end of September 2024, the greenhouse gas intensity of the shares held in portfolio was roughly 37% of the MSCI World AC benchmark, for the corporate bonds held in portfolio it was roughly 42% of the Iboxx Euro Corporates benchmark and for the government bonds held in portfolio it was roughly 114% of the JPM EMU Government Bond benchmark, a decrease from 2019 of 62%, 43% and 27%, respectively.
- As a result of the higher average interest rates, the pension reserves of participants are often higher than the retirement benefit obligations calculated as the present value of the guaranteed minimum pension capital under the defined contribution plan. In 2023, the net asset was therefore reduced by the difference between the retirement benefit obligations calculated in this way and the higher guaranteed minimum reserves and/or the pension reserves calculated using the assigned fund return. The difference at the end of 2024 was 75 million euros and has been added to 'Adjustments to asset ceiling limits', resulting in the net asset being reduced by this amount.
- There are no significant defined benefit plans in the group's other core countries.

<b>Additional information on retirement benefit obligations (in millions of EUR)</b>	<b>2024</b>	<b>2023</b>	<b>2022</b>	<b>2021</b>	<b>2020</b>

Contributions expected in 2025 (in millions of EUR)		34
Regulatory framework	Pension plans are registered in collective labour agreements and incorporated into a set of regulations. Annual reporting of funding levels to supervisory authorities (FSMA/NBB). Any underfunding must be reported immediately to the supervisory authorities.	
Risks for KBC		Investment risk and inflation risk.
ALM policy	The hedging portfolio hedges against interest rate risk and inflation risk using interest rate swaps. The return portfolio aims to generate an extra return.	
Plan amendments	A new version of the employer-funded defined contribution plan was introduced on 1 January 2019. All employees who had been signed up to the defined benefit plan were given the one-time option of switching to this new plan. New employees are signed up to the employer-funded defined contribution plan.	
Curtailments and settlements		Not applicable.
Discounting method	Based on quotes for various time buckets of AA-rated corporate bonds. The derived bond yields are converted into a zero coupon curve.	
Key actuarial assumptions		
• Average discount rate		3.10%
• Expected rate of salary increase		2.47%
• Expected inflation rate		2.16%
• Expected rate of increase in pensions		–
• Weighted average duration of the obligations		10 years
Impact of changes in the assumptions used in the actuarial calculation of the retirement benefit obligations		
Increase in the retirement benefit obligations on 31-12-2024 consequent on:		
• a decrease of 1% in the discount rate		10.98%
• an increase of 1% in the expected inflation rate		8.69%
• an increase that is 1% higher than the expected real increase in salary		11.54%
• an increase of one year in life expectancy		–
The impact of the following assumptions has not been calculated:	Decreasing mortality rates. Pension benefits are paid out in capital, so longevity risk is immaterial. Staff turnover rates: the impact of the changes remains limited.	
<b>Additional information on retirement benefit obligations: DEFINED CONTRIBUTION PLANS, KBC pension fund</b>		
Contributions expected in 2025 (in millions of EUR)		51
Regulatory framework	Pursuant to the Belgian Supplementary Pensions Act, the employer must guarantee a minimum return of 2.50% on employee and employer contributions in 2025.	
Risks for KBC		Investment risk.
Valuation	Retirement benefit obligations are measured on the basis of the accrued benefits on the reporting date, making a projection of these benefits (at the rate of interest guaranteed by law) until the expected age of retirement, and discounting the resulting benefits. KBC offers two types of defined contribution plan: one that is financed through employee contributions and one through employer contributions. The valuation of retirement benefit obligations for the employer-funded defined contribution plan takes account of future contributions. However, it is not taken into account for the valuation of the employee-funded defined contribution plan, because the employer's obligation for that plan only relates to the guaranteed minimum interest rate.	
Discounting method	Based on quotes for various time buckets of AA-rated corporate bonds. The derived bond yields are converted into a zero coupon curve.	
Key actuarial assumptions		
• Average discount rate		3.30%
• Weighted average duration of the obligations		15 years
Impact of changes in the assumptions used in the actuarial calculation of the retirement benefit obligations		
Increase in the retirement benefit obligations on 31-12-2024 consequent on:		
• a decrease of 1% in the discount rate		17.99%

## Note 5.10: Parent shareholders' equity and additional tier-1 instruments

<i>of which treasury shares</i>	<i>20 980 825</i>	<i>8 801 316</i>
Additional information		
Par value per share (in EUR)	3.51	3.51
Number of shares issued but not fully paid up	0	0

- Ordinary shares: ordinary shares of no nominal value. All ordinary shares carry voting rights and each share represents one vote. No participation certificates or non-voting shares have been issued. The shares are listed on Euronext Brussels.
- Capital increases: the number of KBC Group NV shares went up by 238 275 in 2024 and by 136 462 in 2023, due to new shares being issued following the capital increases reserved for staff. For more information, see the 'Company annual accounts and additional information' section.
- Treasury shares:
  - On 10 August 2023, KBC Group NV announced a treasury share buyback programme with a view to dividing excess capital, for which it obtained the required permission from the ECB. An agent was mandated to repurchase KBC shares on the regulated market of NYSE Euronext Brussels on behalf of KBC Group NV until 31 July 2024, for a maximum of 1.3 billion euros. The shares were repurchased subject to the conditions stated in the authorisation granted by the General Meeting of 5 May 2022. Under this authorisation, the Board of Directors is authorised to repurchase a maximum of 10% of the treasury shares under specific conditions and at a price that may not be lower than 1 euro or higher than 110% of the last closing price on Euronext Brussels preceding the date of acquisition. Up to and including 31 July 2024, a total of 20 980 823 treasury shares were repurchased in several transactions for a total amount of 1299 999 960 euros. The voting rights attached to these shares are suspended.
  - On 31 December 2023, KBC group companies also held 4 247 KBC shares in portfolio, 4 245 of which were intended to hedge outstanding derivatives on indices that include KBC Group shares. The 4 245 shares were sold in 2024 as there was no longer any need for this hedge.
- Additional tier-1 (AT1) instruments (these securities are classified as equity instruments under IAS 32 and the coupon is treated as a dividend):
  - In February 2019, KBC issued 500 million euros in AT1 securities (a perpetual AT1 instrument with a five year first-call date and a temporary write-down trigger should the common equity ratio fall below 5.125% and an initial coupon of 4.75% per annum, which is payable every six months). Under CRR Article 78(1)(a), KBC asked the ECB for permission to call this instrument in March 2024. Under agreement EBA Q&A 2023\_6791 of 15 September 2023, the instrument is disqualified as tier-1 capital in the solvency calculations as soon as the replacement instrument is issued (this placement occurred in early September; see below). The instrument was called on 5 March 2024.
  - In September 2023, KBC issued 750 million euros in AT1 securities (a perpetual AT1 instrument with a five year first-call date, a temporary write-down trigger should the common equity ratio fall below 5.125% and an initial coupon of 8.00% per annum, which is payable every six months).
  - In September 2024, KBC issued 750 million euros in AT1 securities (a perpetual AT1 instrument with a seven year first-call date, a temporary write-down trigger should the common equity ratio fall below 5.125% and an initial coupon of 6.25% per annum, which is payable every six months).
  - In April 2018, KBC issued 1 billion euros in AT1 securities (a perpetual AT1 instrument with a seven year first-call date and a temporary write-down trigger should the common equity ratio fall below 5.125% and an initial coupon of 4.25% per annum, which is payable every six months). In September 2024, KBC made the holders of those securities a capped purchase offer. Following the placement of new AT1 securities in the amount of 750 million euros in September 2024 (see above), KBC announced that the maximum acceptance amount for the AT1 securities issued in April 2018 was set at 750 million euros; on 18 September, KBC announced that 636 million euros had ultimately been repurchased.

## 6.0 Other notes

### Note 6.1: Off-balance-sheet commitments and financial guarantees given and received

(in millions of EUR)		31-12-2024			31-12-2023	
	Nominal amount	Provision	Net exposure	Nominal amount	Provision	Net exposure
<b>Undrawn portion of credit lines granted</b>						
Stage 1	45 481	18	45 463	41 551	20	41 531
Stage 2	3 314	9	3 305	6 683	14	6 670
Stage 3	52	2	50	79	5	73
Total	48 848	30	48 818	48 313	39	48 274

<b>Off-balance-sheet commitments and financial guarantees</b>						
Total	61 299	73	61 226	60 680	91	60 589

- Fair value of financial guarantees: based on the available market value.
- The carrying value of financial assets pledged by KBC as collateral came to 40 924 million euros for liabilities and 1 667 million euros for contingent liabilities (36 842 million euros and 4 489 million euros in 2023). At year-end 2024, some 21.8 billion euros' worth of residential mortgage loans and cash collections were entered in the cover asset register for the special estate of the covered bond programme (18.9 billion euros at year-end 2023).
- There is an obligation to return collateral received (which may be sold or repledged in the absence of default by the owner; see table) in its original form, or possibly in cash. Collateral can be called in if loans are terminated for various reasons such as default or bankruptcy. In the event of bankruptcy, the collateral will be sold by the receiver. In other cases, the bank will organise the foreclosure itself or take possession of the collateral. Collateral received that relates to OTC derivatives is primarily cash, which is recognised by KBC on the balance sheet (and is not included in the table). More details are provided in Note 4.3.
- Collateral acquired through foreclosure came to 3 million euros in 2024 (3 million euros in 2023).

Collateral received (which may be sold or repledged in the absence of default by the owner) (in millions of EUR)	Fair value of collateral received		Fair value of collateral sold or repledged	
	31-12-2024	31-12-2023	31-12-2024	31-12-2023
Financial assets	32 091	42 215	12 279	5 267
Equity instruments	30	21	2	2

Loans and advances	252	235	0	0
Cash	0	0	0	0
Other	0	0	0	0

- In the years 2016–2022, KBC contributed to the Single Resolution Fund (SRF) by means of irrevocable payment commitments (IPCs) in the amount of 90 million euros, which are fully covered by cash collateral. In line with industry practice, the following accounting treatment is applied to IPCs: i) the amount of cash collateral is recognised as a financial asset and ii) the hypothetical fund call in case of a resolution is reported as a contingent liability. The recognition of the cash collateral as a financial asset is based on the consideration that, in any scenario, the collateral should be returned to the bank and that interest is received on the amount outstanding. In its 2023 decision, the General Court of the EU ruled that in a scenario in which a bank loses its banking license, it has no claim on the cash collateral. KBC decided to await the outcome of the appeal in this case at the European Court of Justice before considering the potential implications on the accounting treatment of IPCs. The amount of 90 million euros is deducted in the calculation of the common equity capital.

## Note 6.2: Leasing

(in millions of EUR)	31-12-2024	31-12-2023
Finance lease receivables		
Gross investment in finance leases, receivable	8 607	7 824
At not more than one year	2 132	1 925
At more than one but not more than five years	5 001	4 551

Contingent rents recognised in the income statement	107	110
Operating lease receivables		
Future aggregate minimum rentals receivable under non-cancellable operating leases	773	694
Contingent rents recognised in the income statement	1	1

- KBC acts only to a limited extent as a lessee in operational and financial leasing.
- Finance leases: KBC offers finance lease products ranging from equipment and vehicle leasing to real estate leasing. In Belgium, finance leases are typically sold through KBC group's branch network. That channel is becoming increasingly important in Central Europe, too.
- Operating leases: involve primarily full service vehicle leases (mainly cars and bicycles). These are sold through the KBC Bank and CBC Banque branch network and through an internal sales team. Full service car leasing activities are being further developed in Central Europe, too. The increased importance of leasing hybrid and all-electric vehicles supports the transition to green mobility, and the segment of electric company bicycles also continued to grow.
- We report on estimated greenhouse gas emissions associated with lending, leasing and other activities and, in that context, have defined objectives for reducing the greenhouse gas intensity of our financial and operational car leasing. See 'Sustainability statement' in the 'Report of the Board of Directors' section for a more detailed explanation.

\* BEL: Belgium Business Unit; CZR: Czech Republic Business Unit; IMA: International Markets Business Unit; GRP: Group Centre.

- The KBC group's legal structure has one single entity – KBC Group NV – in control of two underlying companies, viz. KBC Bank NV and KBC Insurance NV, as well as companies such as DISCAI NV and KBC Global Services NV. KBC Bank and KBC Insurance have several subsidiaries and sub-subsidiaries. A complete list of group companies (included in or excluded from the scope of consolidation) is provided at [www.kbc.com](http://www.kbc.com) > About us > Our structure.
- All (material) entities (including structured entities (SPVs)) over which the consolidating entity exercises, directly or indirectly, exclusive control are consolidated according the method of full consolidation. To assess whether or not structured entities have to be consolidated, KBC uses the principles set out in IFRS 10, as well as thresholds for inclusion in consolidation.
- Disclosures of interests in other entities (IFRS 12)
  - Significant judgements and assumptions:
    - In general, funds managed by KBC are not included in the scope of consolidation, as they do not meet the three criteria of control (power, exposure to a variable return and ability to use such power to affect those returns).
    - Joint entities in which KBC does not hold 50% of the share capital are classified as joint ventures, since it has joint control over these entities based on shareholder agreements. Based on the Articles of Association and/or shareholder agreements, voting rights in (and therefore the control of) the joint venture are spread evenly across the different shareholders and decisions may only be taken by unanimity.
  - Interests in subsidiaries:
    - For the vast majority of the entities, the voting rights are materially equal to the ownership rights.
    - Pursuant to the joint capital decision, specific Pillar-II levels have been set to ensure that certain minimum capital ratios are respected, which impose certain restrictions on the repatriation of capital and distribution of dividends.
    - With regard to Loan Invest NV, KBC is exposed to loan losses on the mortgage portfolio and, therefore, recognises impairment losses on them where necessary.
  - Interests in unconsolidated structured entities:
    - KBC Bank NV is arranger and dealer of a number of 40-billion-euro medium term notes programmes issued by 19 unconsolidated structured entities established for that purpose. These entities were established between 2006 and 2016 under the Irish Companies Act 2014 as an Irish public limited company or an Irish private limited company. Their primary business is to raise money by issuing notes in order to buy financial assets (such as securities, bonds and deposits) and to enter into related derivative and other contracts. They provide investment opportunities for clients by providing economies of scale, a diversification of credit risk and a high level of granularity. Each structured entity has a prospectus that was approved by the Central Bank of Ireland (available at [www.kbc.be/prospectus/spv](http://www.kbc.be/prospectus/spv)). However, the structured entities are not consolidated because they fail to meet the three criteria for consolidation (power, exposure to a variable return and ability to use such power to affect those returns). At year-end 2024, the assets under management at these entities amounted to 4.8 billion euros.
    - Sponsored unconsolidated structured entities are defined as structured entities where KBC or one of its subsidiaries acts as arranger of the issuance programme, but where the decision-making power of the entities does not reside with KBC or one of its subsidiaries. As a result, these entities are not consolidated.
    - In 2024, KBC had received income from unconsolidated structured entities in the form of management fees (11 million euros) and accounting fees (1 million euros).
    - At year-end 2024, KBC held 1.5 billion euros' worth of notes issued by the unconsolidated structured entities. Its liabilities towards the unconsolidated structured entities amounted to 0.5 billion euros and comprised mainly time deposits (0.5 billion euros).
    - Any potential decrease in the value of the notes is passed on to the end-client, which means it will have no impact on KBC.
- At year-end 2024, no group companies were active in the extractive industry. As a result, no consolidated report on payments to governments has been prepared (see Art.3:8 § 1 of the Companies and Associations Code).

## Note 6.6: Main changes in the scope of consolidation

- Sale of activities in Ireland (2022, 2023 and 2024)
  - At the end of August 2021, KBC Bank Ireland reached agreement on the disposal of a non-performing mortgage loan portfolio of roughly 1.1 billion euros in a transaction that was financed by funds that were managed by CarVal Investors. The deal was finalised in early February 2022. The loans will be managed by Pepper Finance Corporation (Ireland) DAC as the legal title holder of the loans. Pepper is supervised by the Central Bank of Ireland.
  - In October 2021, KBC Bank Ireland also confirmed that it had entered into a legally binding agreement with Bank of Ireland relating to the sale of substantially all of KBC Bank Ireland's performing loan assets and its deposit book to Bank of Ireland Group. The latter also acquired a small non-performing mortgage loan (and credit card balances) portfolio. The transaction was finalised on 3 February 2023. The acquisition, initially totalling approximately 6.5 billion euros, included approximately 7.6 billion euros in performing mortgage loans, approximately 0.1 billion euros in mainly performing commercial and consumer loans, approximately 0.1 billion euros in non-performing mortgage loans and approximately 1.8 billion euros in deposits. The transaction had an impact on the income statement of +365 million euros in 2023 (of which +408 million euros in 'Net other income'). Once finalised, the transaction also positively impacted the common equity ratio by approximately 0.9 percentage points in the first quarter of 2023 (partly due to a reduction in risk-weighted assets).
  - On 1 December 2023, KBC Bank Ireland transferred the vast majority of the remaining assets and liabilities to KBC Bank Dublin branch. On 30 April 2024, KBC Bank Ireland (currently Exicon DAC) returned its banking licence to the Central Bank of Ireland.
  - See also Note 3.11.
- There were no other material changes in 2024.

## Note 6.7: Risk management and capital adequacy

Capital management is a key management process relating to all decisions on the level and composition of our capital, both for banking and for insurance. It covers all instruments that are positioned to absorb losses in going concern and/or gone concern situations. Capital management aims to achieve the best possible balance between regulatory requirements, investor expectations, rating agencies' views and management ambitions. Ultimate accountability for capital management lies with the Board of Directors. Capital management entails a broad scope of activities covering strategic topics (such as defining policies, targets, etc.), frameworks and models (e.g., for regulatory capital, internal capital, cost of equity, measuring performance, etc.), planning and allocation (e.g., allocating capital to business, planning capital instrument issuances, forecasting capital ratios, etc.), implementation (e.g., dividends, capital transactions) and monitoring (including current solvency positions at various levels, compliance with group policies and regulatory requirements). ICAAP (Internal Capital Adequacy Assessment Process) consists of numerous business and risk processes that together contribute to the aim of being adequately capitalised at all times in view of our risk profile and the quality of our risk management and control environment. In addition to the integrated approach at group level, KBC Insurance and its insurance and reinsurance subsidiaries conduct an Own Risk and Solvency Assessment (ORSA) on a regular basis, in accordance with Solvency II requirements.

We report the solvency based on IFRS data and according to the rules imposed by the regulator.

- For the KBC group and KBC Bank, this implies that we calculate the solvency ratios based on CRR/CRD. KBC began applying the transitional provisions for IFRS 9 and certain tier-2 instruments on 30 June 2020. KBC has received authorisation from the regulator to apply a risk weighting to the participation in KBC Insurance (Danish compromise method) at KBC group level. The KBC group and KBC Bank are subject to minimum solvency ratios.
- In accordance with the regulatory requirement, the common equity ratio of the KBC group must be 10.88% (fully loaded) at year-end 2024. This includes the Pillar 1 minimum requirement (4.5%), the Pillar 2 requirement (1.09% set by the ECB following its supervisory review and evaluation process) and the buffer requirements (5.28% set by the local competent authorities in KBC's core markets). At year-end 2024, the fully loaded common equity ratio came to 15.0% (see the 'How do we manage our capital?' section). At year-end 2024, the transitional common equity ratio came to 13.9%, which represented a capital buffer of 2.4% relative to the minimum requirement of 11.4%.
- In accordance with the regulatory requirement, the common equity ratio of KBC Bank must be 11.1% (transitional) at year-end 2024. At year-end 2024, the transitional common equity ratio was 13.2%.
- The solvency of KBC Insurance is calculated on the basis of Solvency II. At year-end 2024, the Solvency II ratio came to 200% relative to the minimum requirement of 100%.

**Key solvency figures for the KBC group,  
KBC Bank and KBC Insurance (in millions of EUR)**

	KBC group (consolidated) CRR/CRD transitional	KBC Bank (consolidated) CRR/CRD transitional	KBC Insurance (consolidated) Solvency II			
	31-12-2024	31-12-2023	31-12-2024	31-12-2023	31-12-2024	31-12-2023
Total regulatory capital, after profit appropriation	21 048	19 768	18 981	17 952	4 392	4 130
Tier-1 capital	18 485	17 389	16 440	15 573	3 891	3 629

<i>Holding-company activities and elimination of intragroup transactions</i>	<i>729</i>	<i>704</i>	–	–	–	–
Solvency capital requirement (insurance)	–	–	–	–	2 196	2 005
Common equity ratio (group, bank)	13.9%	13.8%	13.2%	13.4%	–	–
Solvency II ratio (insurance)	–	–	–	–	200%	206%

1 Includes perpetual subordinated loans with fully discretionary, non-cumulative interest payments (included in 'Total equity' under IFRS). The securities also have a loss absorption mechanism (i.e. a temporary write-down trigger should the common equity tier-1 ratio fall below 5.125%). Also see Note 5.10.

2 Includes subordinated loans with a fixed maturity date where principal and interest payments cannot be cancelled in a going concern.

3 Supervision of the RWA internal models' compliance with the approval criteria as provided for in the standards imposed by the regulator does not come under the responsibility of the statutory auditor.

- More detailed information is provided in the 'How do we manage our capital?' section of this report and in KBC's Risk Report.
- The loan portfolio accounts for the largest share of the financial assets. Based on internal management reports, the composition and quality of the loan portfolio is set out in detail in the 'How do we manage our risks?' section (under 'Credit risk'). The information required in relation to risks is provided in those parts of the 'How do we manage our risks?' section which have been audited by the statutory auditor and which constitute part of the financial statements.

#### Note 6.8: Post-balance-sheet events

There were no significant non-adjusting events between the balance sheet date and the date on which the financial statements were approved for publication by the Board of Directors (13 March 2025).

## Note 6.9: General information on the company

- Name KBC Group.
- Incorporated: 9 February 1935 as the Kredietbank; the present name dates from 2 March 2005.
- Country of incorporation: Belgium.
- Registered office: Havenlaan 2, 1080 Brussels, Belgium.
- VAT: BE 0403.227.515.
- RLP: Brussels.
- Website: <https://www.kbc.com>
- E-mail address reserved for shareholders and bondholders: IR4U@kbc.be
- Legal form: *genoteerde naamloze vennootschap* (listed company with limited liability) under Belgian law. The company is a mixed financial holding company that is subject to the prudential supervision of the National Bank of Belgium and the European Central Bank.
- Life: undefined.
- Object (Article 2 of the Articles of Association, which are available at [www.kbc.com](http://www.kbc.com)):  
The company has as its object the direct or indirect ownership and management of shareholdings in other companies, including but not restricted to credit institutions, insurance companies and other financial institutions.  
The company also has as object to provide services to third parties, either for its own account or for the account of others, including to companies in which the company has an interest – either directly or indirectly – and to (potential) clients of those companies.  
The object of the company is also to acquire in the broadest sense of the word (including by means of purchase, hire and lease), to maintain and to operate resources, and to make these resources available in the broadest sense of the word (including through letting and granting rights of use) to the beneficiaries referred to in the second paragraph.  
In addition, the company may function as an intellectual property company responsible for, among other things, the development, acquisition, management, protection and maintenance of intellectual property rights, as well as for making these rights available, granting rights of use in respect of these rights and/or transferring these rights.  
The company may also perform all commercial, financial and industrial transactions that may be useful or expedient for achieving the object of the company and that are directly or indirectly related to this object. The company may also by means of subscription, contribution, participation or in any other form whatsoever participate in all companies, businesses or institutions that have a similar, related or complementary activity.  
In general, the company may, both in Belgium and abroad, perform all acts which may contribute to the achievement of its object.
- Documents open to public inspection: the Articles of Association of the company can be found at the Registry of the Dutch-speaking division of the Brussels Business Court and at [www.kbc.com](http://www.kbc.com) and [www.notaris.be/statuten](http://www.notaris.be/statuten). The financial statements, the annual report and the statutory auditor's reports regarding the financial statements are filed with the National Bank of Belgium and are available at [www.kbc.com](http://www.kbc.com). The annual report can also be obtained from the company's registered office and will be sent to those requesting it. Extracts of minutes concerning decisions on the appointment and the termination of the offices of members of the Executive Committee and the Board of Directors are published in the appendices to the Belgian Official Gazette. Financial reports about the company are published in the financial press and/or on [www.kbc.com](http://www.kbc.com). Convening notices of general meetings of shareholders are published in the Belgian Official Gazette, in at least one national newspaper, in the media and on [www.kbc.com](http://www.kbc.com).
- For information on the general meeting of shareholders and the right of shareholders to take part in such meetings, see Article 23 et seq. of the Articles of Association, which are available at [www.kbc.com](http://www.kbc.com).

### STATUTORY AUDITOR'S REPORT TO THE GENERAL SHAREHOLDERS' MEETING OF KBC GROUP NV ON THE CONSOLIDATED ACCOUNTS FOR THE YEAR ENDED 31 DECEMBER 2024

We present to you our statutory auditor's report in the context of our statutory audit of the consolidated accounts of KBC Group NV (the "Company") and its subsidiaries (jointly "the Group"). This report includes our report on the consolidated accounts, as well as the other legal and regulatory requirements. This forms part of an integrated whole and is indivisible.

We have been appointed as statutory auditor by the general meeting of 5 May 2022, following the proposal formulated by the board of directors and following the recommendation by the audit committee and the proposal formulated by the works' council. Our mandate will expire on the date of the general meeting which will deliberate on the annual accounts for the year ended 31 December 2024. We have performed the statutory audit of the Group's consolidated accounts for nine consecutive years.

#### Report on the consolidated accounts

##### **Unqualified opinion**

We have performed the statutory audit of the Group's consolidated accounts, which comprise the consolidated balance sheet as at 31 December 2024, the consolidated income statement, the consolidated statement of comprehensive income, the consolidated statement of changes in equity and the consolidated cashflow statement for the year then ended, and notes to the consolidated financial statements, including a summary of significant accounting policies and other explanatory information, and which is characterised by a consolidated balance sheet total of EUR 373.048 million and a profit for the year (attributable to equity holders of the parent) for the year of EUR 3.415 million.

In our opinion, the consolidated accounts give a true and fair view of the Group's net equity and consolidated financial position as at 31 December 2024, and of its consolidated financial performance and its consolidated cash flows for the year then ended, in accordance with IFRS Accounting Standards as adopted by the European Union and with the legal and regulatory requirements applicable in Belgium.

##### **Basis for unqualified opinion**

We conducted our audit in accordance with International Standards on Auditing (ISA) as applicable in Belgium. Furthermore, we have applied the International Standards on Auditing as approved by the IAASB which are applicable to the year-end and which are not yet approved at the national level. Our responsibilities under those standards are further described in the "*Statutory auditor's responsibilities for the audit of the consolidated accounts*" section of our report. We have fulfilled our ethical responsibilities in accordance with the ethical requirements that are relevant to our audit of the consolidated accounts in Belgium, including the requirements related to independence.

We have obtained from the board of directors and Company officials the explanations and information necessary for performing our audit.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

## FREE TRANSLATION FROM THE DUTCH ORIGINAL

### Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated accounts of the current period. These matters were addressed in the context of our audit of the consolidated accounts as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

#### Estimation uncertainty with respect to impairment allowances for loans and advances

##### *Description of the Key Audit Matter*

The appropriateness of impairment allowances for loans and advances measured at amortised cost requires significant management judgement. Measuring impairment allowances for loans and advances measured at amortised cost under IFRS 9 requires an assessment of the 12-month or the lifetime expected credit losses and the assessment of significant increases in credit risk or whether loans and advances measured at amortised cost have defaulted.

The geopolitical and macroeconomic uncertainties continue to impact the determination of the expected credit loss provisions produced by the models.

Information regarding impairment allowances for loans and advances measured at amortised cost, including information concerning the impact of the geopolitical and emerging risks, is included in Notes 3.9 and 4.2 to the consolidated accounts, in application of the policies as described in Note 1.2 "Summary of material accounting policies".

At year-end 31 December 2024, the carrying value before impairment of loans and advances measured at amortised cost amounts to EUR 217.093 million, the total corresponding impairment at that date amounts to EUR 2.448 million.

The assessment of significant increases in credit risk, the assessment of whether loans and advances at amortised cost are in default and the measurement of 12-month or lifetime expected credit losses are part of the estimation process of the Group and are, amongst others, based on macroeconomic scenarios and microeconomic parameters (as defined by the Group), credit risk models, triggers indicating a significant increase in credit risk and default triggers, the financial condition of the counterparty and the expected future cash flows or the value of collateral.

The use of different modelling techniques, scenarios and assumptions, including in the determination of the expected credit loss provisions related to the geopolitical and macroeconomic uncertainties, could lead to different estimates of impairment allowances on loans and advances measured at amortised cost.

As the loans and advances measured at amortised cost represent the majority of the Group's balance sheet and given the related estimation uncertainty on impairment allowances we consider this as a key audit matter.

## FREE TRANSLATION FROM THE DUTCH ORIGINAL

### *How our Audit addressed the Key Audit Matter*

Our audit procedures comprised an assessment of the overall governance of the credit and impairment process of the Group, including the 12-month and lifetime expected loss modelling processes and the determination of the expected credit loss provisions related to the geopolitical and macroeconomic uncertainties. We have assessed and tested the design and operating effectiveness of the controls within the loan origination process, risk management process and the estimation process for determining impairment allowances. For loan impairment allowances determined on an individual basis, we have performed, for a sample of corporate and SME credit files, a detailed review; we challenged the default triggers and the quantification including forecasts of future cash flows, valuation of underlying collateral and estimates of recovery on default.

For the 12-month and lifetime expected credit loss impairment allowances, we challenged the adequacy of significant increase in credit risk triggers and the macroeconomic scenarios and microeconomic parameters (as defined by the Group) and, together with our experts, we tested the underlying models including the Group's model approval and independent validation process.

We also assessed the completeness of the factors considered by management in their determination of the expected credit loss provisions related to the geopolitical and macroeconomic uncertainties and tested the mathematical accuracy of the calculations to determine these adjustments and assessed their reasonableness.

Finally, we assessed the completeness and accuracy of the disclosure and whether the disclosures are in compliance with the IFRS Accounting Standards as adopted by the European Union.

In our view, the impairments estimated by management, including the expected credit loss provisions related to the geopolitical and macroeconomic uncertainties, are within a reasonable range of outcomes in view of the overall loans and advances and of the related uncertainties as disclosed in the consolidated accounts.

### Estimation uncertainty on impairment of goodwill

#### *Description of the Key Audit Matter*

As described in Note 5.5 to the consolidated accounts, in application of the policies as described in Note 1.2 "Summary of material accounting policies", the Group has recorded an outstanding goodwill balance amounting to EUR 1.221 million as at 31 December 2024. Impairment analyses are performed annually, or whenever a triggering event has occurred, in order to determine whether the recoverable amount exceeds the carrying amount.

Taking into consideration the significant management judgement and the related estimation uncertainty involved in determining the recoverable amount at the level of the respective cash generating units, we consider this as a key audit matter.

## FREE TRANSLATION FROM THE DUTCH ORIGINAL

### *How our Audit addressed the Key Audit Matter*

We obtained an understanding of the internal control framework related to goodwill impairment. Next to that, we assessed, together with our experts, the appropriateness of the discounted cash flow models developed by management, the evaluation of the significant assumptions used by management related to the free cash flow projections, the discount rates and the terminal growth rates of the respective cash generating units, as well as the completeness and accuracy of the underlying data used in the models.

Finally, we assessed the completeness and accuracy of the disclosures and whether the disclosures are in compliance with the IFRS Accounting Standards as adopted by the European Union.

In our view, the resulting outcomes of management's goodwill impairment assessment are within a reasonable range of outcomes in view of the overall outstanding goodwill and of the related uncertainties as disclosed in the consolidated accounts.

### Estimation uncertainty with respect to valuation of insurance contract liabilities

#### *Description of the Key Audit Matter*

The LRC of contracts measured using the BBA (EUR 12.965 million) or the VFA (EUR 948 million) includes the PVFCF relating to future insurance services, as well as the CSM and the RA.

The assumptions used for the projections of the said cash flows relate, mainly, to mortality, longevity, lapse, profitability, dormancy and the defining of directly attributable expenses. The actuarial calculation of the cash flows arising from such insurance contracts is complex and highly judgmental as it is based on assumptions which are affected by future economic and political conditions and government regulations. Furthermore, the determination of the appropriate discounting of the said cash flows using the top-down approach is considered complex and highly judgemental, leading us to consider this as a key audit matter.

The LIC of contracts measured using the PAA (EUR 2.479 million) accounts for the estimated cost of claims occurring up to the reporting date. The actuarial projection methods of the present value of expected future cash flows related to past insurance services arising from such insurance contracts are complex and highly judgmental as they are based on a number of key assumptions derived from historical information, mainly relating to the amount of the claim and claim payment patterns including expected future development. Furthermore, the determination of the appropriate discounting of the said cash flows using the bottom-up approach is considered complex and highly judgemental, leading us to consider this as a key audit matter.

Information on the valuation of insurance contract liabilities is included in Note 5.6.1 to the consolidated accounts, in application of the policies as described in Note 1.2 "Summary of material accounting policies".

### *How our Audit addressed the Key Audit Matter*

We performed procedures on the design and operating effectiveness of the Group's controls to ascertain that the data used in the valuation and measurement of the insurance contract liabilities are adequate and complete. We performed testing of the Group's procedures to determine the aforementioned assumptions, testing of the assumptions based on market observable data and actuarial analysis through backtesting of the assumptions used.

## FREE TRANSLATION FROM THE DUTCH ORIGINAL

Our substantive procedures on the LRC for insurance contracts measured under the BBA or the VFA mainly consisted of the following procedures:

- Assessing the accounting policies, the methodology and reasonableness of the actuarial models and assumptions used in the calculations of the PVFCF;
- Testing the completeness and accuracy of the data used in determining the assumptions, as well as data used in actuarial calculations;
- Verifying the accuracy of the fulfilment cash flows on a sample basis resulting from our risk assessment;
- Verifying the methodology and reasonableness of the RA;
- Performing a recalculation of the CSM for a sample of selected cohorts, including new business;
- Reviewing the analysis of change and recalculation of the release of the CSM based on coverage units, for a selected sample of units of account; and
- Verifying the locked-in and current discount rates (top-down).

Our substantive procedures on the LIC for insurance contracts measured under the PAA mainly consisted of the following procedures:

- Assessing the accounting policies, the methodology and reasonableness of the actuarial models and assumptions used in the calculations of the present value of fulfilment cash flows;
- Testing the completeness and accuracy of the data used in actuarial calculations;
- Independently assessing the actuarial models for a risk based sample of a group of contracts; and
- Verifying the locked-in and current discount rates (bottom-up).

Finally, we assessed the completeness and accuracy of the disclosures regarding insurance contracts to assess compliance with disclosure requirements included in the IFRS Accounting Standards as adopted by the European Union.

Our internal actuarial experts assisted us in performing our audit procedures.

We discussed the outcome of our actuarial analysis with the actuarial function holder of the Group.

In our view, the insurance contract liabilities estimated by management including the assumptions used for projecting cash flows, are within a reasonable range of outcomes in view of the overall insurance contract liabilities and of the related uncertainties as disclosed in the consolidated accounts.

### ***Responsibilities of the board of directors for the preparation of the consolidated accounts***

The board of directors is responsible for the preparation of consolidated accounts that give a true and fair view in accordance with IFRS Accounting Standards as adopted by the European Union and with the legal and regulatory requirements applicable in Belgium, and for such internal control as the board of directors determines is necessary to enable the preparation of consolidated accounts that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated accounts, the board of directors is responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the board of directors either intends to liquidate the Group or to cease operations, or have no realistic alternative but to do so.

## FREE TRANSLATION FROM THE DUTCH ORIGINAL

### ***Statutory auditor's responsibilities for the audit of the consolidated accounts***

Our objectives are to obtain reasonable assurance about whether the consolidated accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISA will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated accounts.

In performing our audit, we comply with the legal, regulatory and normative framework applicable to the audit of the consolidated accounts in Belgium. A statutory audit does not provide any assurance as to the Group's future viability nor as to the efficiency or effectiveness of the board of directors' current or future business management at Group level. Our responsibilities in respect of the use of the going concern basis of accounting by the board of directors are described below.

As part of an audit in accordance with ISA, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated accounts, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Plan and perform the group audit to obtain sufficient appropriate audit evidence regarding the financial information of the entities or business units within the Group as a basis for forming an opinion on the consolidated financial statements. We are responsible for the direction, supervision and review of the audit work performed for purposes of the group audit. We remain solely responsible for our audit opinion.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the board of directors.
- Conclude on the appropriateness of the board of directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our statutory auditor's report to the related disclosures in the consolidated accounts or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our statutory auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the consolidated accounts, including the disclosures, and whether the consolidated accounts represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient and appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the Group audit. We remain solely responsible for our audit opinion.

## FREE TRANSLATION FROM THE DUTCH ORIGINAL

We communicate with the audit committee regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the audit committee with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the audit committee, we determine those matters that were of most significance in the audit of the consolidated accounts of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter.

### **Other legal and regulatory requirements**

#### ***Responsibilities of the board of directors***

The board of directors is responsible for the preparation and the content of the directors' report on the consolidated accounts, including the sustainability information, and the other information included in the annual report on the consolidated accounts.

#### ***Statutory auditor's responsibilities***

In the context of our engagement and in accordance with the Belgian standard which is complementary to the International Standards on Auditing (ISA) as applicable in Belgium, our responsibility is to verify, in all material respects, the directors' report on the consolidated accounts and the other information included in the annual report on the consolidated accounts and to report on these matters.

This responsibility does not include performing the assurance engagement on the consolidated sustainability statement included in the directors' report on the consolidated accounts, as the Company has appointed another registered auditor for this assurance engagement. This section does not concern the assurance on the consolidated sustainability information included in the directors' report on the consolidated accounts.

#### ***Aspects related to the directors' report on the consolidated accounts and to the other information included in the annual report on the consolidated accounts***

The directors' report on the consolidated accounts includes the consolidated sustainability information that is the subject of a separate auditor's report, which contains an "Unqualified conclusion" on the limited level of assurance with regard to this sustainability information, issued by KPMG Bedrijfsrevisoren BV on 28 March 2025.

In our opinion, after having performed specific procedures in relation to the directors' report on the consolidated accounts, this directors' report is consistent with the consolidated accounts for the year under audit and is prepared in accordance with article 3:32 of the Companies' and Associations' Code.

In the context of our audit of the consolidated accounts, we are also responsible for considering, in particular based on the knowledge acquired resulting from the audit, whether the directors' report on the consolidated accounts and the other information included in the annual report on the consolidated accounts, containing the sections:

- "Abridged company annual accounts";
- "Glossary of financial ratios and terms"; and
- "EU taxonomy - detailed tables".

is materially misstated or contains information which is inadequately disclosed or otherwise misleading. In light of the procedures we have performed, there are no material misstatements we have to report to you.

## FREE TRANSLATION FROM THE DUTCH ORIGINAL

### ***Statements related to independence***

- Our registered audit firm and our network did not provide services which are incompatible with the statutory audit of the consolidated accounts, and our registered audit firm remained independent of the Group in the course of our mandate.
- The fees for additional services which are compatible with the statutory audit of the consolidated accounts referred to in article 3:65 of the Companies' and Associations' Code are correctly disclosed and itemized in the notes to the consolidated accounts.

### ***European Uniform Electronic Format (ESEF)***

We have also verified, in accordance with the draft standard on the verification of the compliance of the annual report with the European Uniform Electronic Format (hereinafter "ESEF"), the compliance of the ESEF format with the regulatory technical standards established by the European Delegated Regulation No. 2019/815 of 17 December 2018 (hereinafter: "Delegated Regulation") and with the Royal Decree of 14 November 2007 concerning the obligations of issuers of financial instruments admitted to trading on a regulated market.

The board of directors is responsible for the preparation of an annual report, in accordance with ESEF requirements, including the consolidated accounts in the form of an electronic file in ESEF format (hereinafter "digital consolidated accounts").

Our responsibility is to obtain sufficient appropriate evidence to conclude that the format and marking language of the digital consolidated financial accounts comply in all material respects with the ESEF requirements under the Delegated Regulation.

Based on our procedures performed, we believe that the format of the annual report and marking of information in the digital consolidated accounts included in the annual report of KBC Group NV per 31 December 2024, and which will be available in the Belgian official mechanism for the storage of regulated information (STORI) of the FSMA, are, in all material respects, in compliance with the ESEF requirements under the Delegated Regulation and the Royal Decree of 14 November 2007.

### ***Other statement***

This report is consistent with the additional report to the audit committee referred to in article 11 of the Regulation (EU) N° 537/2014.

A professional photograph of a middle-aged man with dark hair and a beard, wearing a dark blue suit and white shirt. He is holding a black tablet computer and looking towards the camera with a slight smile. The background is blurred, showing what appears to be an office or industrial setting with concrete structures and overhead lights.

Additional  
information

# Abridged company annual accounts

The company annual accounts of KBC Group NV are presented here in abridged form. A full set of these accounts will be submitted for approval to the General Meeting of Shareholders of 30 April 2025. The company annual accounts, the report of the Board of Directors and the statutory auditor's report are filed with the National Bank of Belgium. These documents are available free of charge from KBC Global Services NV, Investor Relations Office, IRO, Havenlaan 2, 1080 Brussels, Belgium. They can also be viewed at [www.kbc.com](http://www.kbc.com). The statutory auditor has delivered an unqualified audit opinion on the company annual accounts of KBC Group NV.

The company annual accounts have been prepared according to Belgian accounting standards (B-GAAP) and are, therefore, not comparable with the figures prepared in accordance with IFRS in the other sections of this report.

## Dividend

In mid-May 2024 we paid the final dividend for 2023 (3.15 euros per share entitled to dividend), at the end of May 2024 we paid an exceptional interim dividend (0.70 euros per share) for 2023 and in November 2024 we paid an interim dividend (1 euro per share) as an advance on the dividend for 2024. We propose to the General Meeting of Shareholders of 30 April 2025 a gross final dividend of 3.15 euros per share, bringing the total gross dividend to 4.85 euros per share (of which 1.00 euro and 0.70 euros were already paid in 2024). The dividend payout ratio (dividend for 2024 and coupon on AT1 instruments, divided by consolidated net profit) will then be 51% for 2024.

## Note 1: Financial fixed assets

(in millions of EUR)	Participating interests in affiliated companies	Amounts receivable from affiliated companies	Participating interests in companies linked by participating interests
<b>Carrying value at 31-12-2023</b>	<b>16 368</b>	<b>22 309</b>	<b>1</b>
Acquisitions in 2024	1	3 868	0
Disposals in 2024	0	-5 211	0
Other changes in 2024	-6	0	0
<b>Carrying value at 31-12-2024</b>	<b>16 363</b>	<b>20 966</b>	<b>1</b>

- Participating interests in affiliated companies are mainly the shareholdings in KBC Bank NV and KBC Insurance NV, as well as in KBC Global Services NV and DISCAI.
- The amounts receivable from affiliated companies related to loans to KBC Bank NV in the form of additional tier-1 capital (1.9 billion euros in total), tier-2 capital (2.4 billion euros), tier-3 capital (16.2 billion euros) and a subordinated loan of 0.5 billion euros to KBC Insurance NV.
- The main changes in 2024 related to new loans to KBC Bank NV (3.9 billion euros). In addition, 5.2 billion euros reached maturity.

## Note 2: Changes in equity

(in millions of EUR)	31-12-2023	Capital increase for staff	Appropriation	31-12-2024
Capital	1 461	1	–	1 462
Share premium account	5 516	13	–	5 529
Reserves	1 287	–	351	1 638
Profit (Loss) carried forward	7 869	–	-28	7 841
<b>Equity</b>	<b>16 133</b>	<b>14</b>	<b>323</b>	<b>16 470</b>

- At year-end 2024, the company's issued capital amounted to 1 461 854 095.51 euros, represented by 417 544 151 shares of no nominal value. The capital is fully paid up.
- A capital increase under the authorisation to increase capital carried out on 13 December 2024 and reserved exclusively for employees of KBC Group NV and certain of its Belgian subsidiaries resulted in 238 275 shares being issued at a price of 56.75 euros per share. By carrying out this capital increase, the group aims to strengthen ties with its staff and the staff of its Belgian subsidiaries. Given the limited extent of the capital increase, the financial ramifications for existing shareholders are minor. All of the shares issued in 2024 will also be entitled to dividend from the 2024 financial year (with the exception of the interim dividend and the exceptional interim dividend paid by the company in November and May 2024).
- The authorisation to increase capital may still be exercised up to and including 22 May 2028 for an amount of 698 684 673.13 euros, with suspension of the preferential subscription rights of existing shareholders being restricted to a maximum of 144 684 673.13 euros. Based on an accounting par value of 3.51 euros a share, a maximum of 199 055 462 new KBC Group NV shares can therefore be issued, with the possibility to suspend the preferential subscription rights attached to a maximum of 41 220 704 of these shares.

## Note 3: Shareholder notifications and share buybacks

- Notifications received: we received a number of notifications in 2024 pursuant to the Belgian Act of 2 May 2007 concerning the disclosure of significant participations. All notifications we receive are published in detail on [www.kbc.com](http://www.kbc.com).

Notifications received in 2024 (percentages as stated in the notifications) and other shareholding updates	Situation as at	Shares/voting securities	Financial instruments treated as shares/ voting securities	Total
KBC Group <sup>1</sup>	4 March 2024	3.01%	–	3.01%
KBC Group <sup>1</sup>	30 July 2024	5.02%	–	5.02%
BlackRock, Inc	1 October 2024	4.27%	0.10%	4.37%
Core shareholders (shareholder syndicate) <sup>2</sup>	1 December 2024	41.75%	–	41.75%

<sup>1</sup> Under the 1.3-billion-euro share buyback programme. The voting rights attached to these shares are suspended.

<sup>2</sup> See the press release of 24 December 2024, which is published at [www.kbc.com](http://www.kbc.com).

- The average accounting par value of the KBC share came to 3.51 euros in 2024.
- For information on the repurchase and disposal of treasury shares, see Note 5.10 in the 'Consolidated financial statements' section.

## Note 4: Balance sheet at 31-12-2024

- The balance sheet total amounted to 39 117 million euros, compared to 40 251 million euros at year-end 2023.
- 'Financial fixed assets' are discussed in Note 1.
- 'Current assets' amounted to 1 787 million euros, whereas the year-earlier figure was 1 573 million euros. The change was largely attributable to share buybacks in the amount of 824 million euros in 2024 and the decrease in cash at bank and in hand and other investments (656 million euros combined).
- 'Equity' is dealt with in Note 2.
- 'Amounts payable' totalled 22 646 million euros, compared with 24 117 million euros at year-end 2023. The change is attributable in part to the 1.1-billion decrease in amounts payable within one year (financial debt – Commercial Paper).

## Note 5: 2024 result:

- Net profit totalled 2 244 million euros, as opposed to 2 302 million euros a year earlier.
- The most important change in the financial result is the lower amount (49 million euros) of dividends received.

## Note 6: Additional information

- For more information on the statutory auditor's remuneration, see Note 6.4 in the 'Consolidated financial statements' section.
- At year-end 2024, KBC Group NV had two branch offices.
- KBC Group NV uses financial instruments to hedge interest rate risks. At year-end 2024, the outstanding notional amount of interest rate swaps used for hedging such risks was 500 million euros.
- KBC Group NV is the issuing entity for all loss absorbing instruments (shareholders' capital, AT1, T2 and MREL-eligible instruments). In principle, the financial resources are transferred to KBC Bank and KBC Insurance in the same or a similar format and with a similar term. Consequently, the maturity of the liability issued by KBC Group matches that of the loans to its subsidiaries. Dividends payable by KBC Group are financed by dividends receivable from KBC Bank and KBC Insurance. Any temporary liquidity shortfalls can be covered by issuing short-term debt securities under the Short Term Certificate of Deposit Programme.
- The information required in accordance with Article 3:6 of the Belgian Companies and Associations Code that has not been provided above appears in the 'Report of the Board of Directors' section.

# Glossary of financial ratios and terms

Besides the ratios and terms required by law or IFRS, we also use our own ratios and definitions, known as 'alternative performance measures'. We identify them by including 'APM' in the heading.

(amounts are stated in millions of EUR, unless otherwise stated)	Reference	Calculation	2024	2023
<b>Basic and diluted earnings per share</b>				
A detailed calculation can be found in Note 3.12.			–	
<b>Combined ratio (non-life insurance) (APM)<sup>1</sup></b>				
The technical profitability of the non-life insurance business in the short-term, more particularly the extent to which insurance premiums adequately cover claim payments and expenses.	Note 3.6	A: Non-life PAA: claims and claim-related costs net of reinsurance B: Costs other than claims and commissions C: Non-life PAA: net earned expected premiums received (A+B)/C	1 362 729 2 331 90%	1 204 676 2 160 87%
<b>Common equity ratio</b>				
A detailed description/calculation can be found in the 'How do we manage our capital? section.			–	–
<b>Cost/income ratio excluding bank and insurance tax (APM)<sup>1</sup></b>				
The relative cost efficiency (costs relative to income excluding bank and insurance tax) of the group.	Consolidated income statement	A: Total operating expenses excluding bank and insurance tax B: Insurance commissions paid C: Total income (A+B)/C	4 474 383 11 167 43%	4 438 340 11 224 43%
<b>Cost/income ratio including bank and insurance tax but excluding exceptional or non-operating items (APM)<sup>1</sup></b>				
Where relevant, we also include bank and insurance tax but exclude exceptional or non-operating items when calculating the cost/income ratio. This calculation aims to give a better idea of the relative cost efficiency of the pure business activities.	Consolidated income statement A breakdown of the exceptional/non-operational items (per quarter) can be found in our General Investor Presentations at <a href="http://www.kbc.com">www.kbc.com</a> .	A: Total operating expenses excluding bank and insurance tax B: Bank and insurance tax C: Insurance commissions paid D: Exceptional and/or non-operational costs <sup>2</sup> E: Total income F: Exceptional and/or non-operational income <sup>2</sup> (A+B+C-D)/(E-F)	4 474 623 383 -92 11 167 232 47%	4 438 687 340 -124 11 224 -429 49%
<b>Coverage ratio (APM)</b>				
The proportion of impaired loans covered by stage 3 impairment charges. Where appropriate, the numerator and denominator may be limited to impaired loans that are more than 90 days past due.	'Loan and investment portfolio' table in 'How do we manage our risks?'	A: Stage 3 impairment on loans B: Impaired loans A/B	1 979 4 171 47%	1 888 4 221 45%
<b>Credit cost ratio (APM)<sup>1,3</sup></b>				
Loan impairment charges for a specific period, relative to the total loan portfolio (see 'Loan portfolio' for definition). In the longer term, this ratio can provide an indication of the credit quality of the portfolio.	Consolidated income statement and 'Loan and investment portfolio' table in 'How do we manage our risks?'	A: Net changes in loan loss impairment charges B: Average outstanding loan portfolio A/B	207 206 928 0.10%	-9 200 270 0.00%
<b>Impaired loans ratio (APM)<sup>1</sup></b>				
The proportion of impaired loans in the loan portfolio (see 'Loan portfolio' for definition), thus reflecting the credit-worthiness of the portfolio. Impaired loans are loans where it is unlikely that the full contractual principal and interest will be repaid/paid (KBC default status of PD 10, PD 11 or PD 12). The numerator in the formula may be limited to impaired loans that are more than 90 days past due (PD 11 + PD 12).	'Loan and investment portfolio' table in 'How do we manage our risks?'	A: Impaired loans B: Total loan portfolio A/B	4 171 210 903 2.0%	4 221 202 953 2.1%

## Leverage ratio

A detailed description/calculation can be found in the 'How do we manage our capital?' section.

- -

## Liquidity coverage ratio (LCR)

The bank's liquidity position in the short term, more specifically the extent to which the group is able to overcome liquidity difficulties over a one-month period. It is the average of 12 end-of-month LCR figures.

The European Commission's Delegated Act on LCR and the European Banking Authority's guidelines for LCR disclosure

A: Stock of high-quality liquid assets  
B: Total net cash outflows over the next 30 calendar days  
A/B

100 631	101 555
63 588	63 805
158%	159%

## Loan portfolio (APM)

Gives an idea of the magnitude of (what are mainly traditional) lending activities.

Notes 4.1, 4.2 and 6.1 and 'Loan and investment portfolio' table in 'How do we manage our risks?'

A: Loans and advances to customers	192 067	183 613
B: Reverse repos (not with central banks)	424	763
C: Debt instruments issued by corporates and by credit institutions and investment firms (banking)	5 690	6 681
D: Other exposures to credit institutions	3 207	3 301
E: Financial guarantees granted to clients and other commitments	10 476	10 263
F: Impairment on loans	2 455	2 483
G: Insurance entities (-)	-1 847	-1 927
H: Non-loan-related receivables (-)	-499	-528
I: Other	-1 071	-1 694
A+B+C+D+E+F+H+G+H+I	210 903	202 953

## Market capitalisation

Stock market value of the KBC group.

Note 5.10

A: Closing price of KBC share (in EUR)	74.5	58.7
B: Number of shares (in millions)	417.5	417.3
AxB (in billions of EUR)	31.1	24.5

## Minimum requirement for own funds and eligible liabilities (MREL)

A detailed description/calculation can be found in the 'How do we manage our capital?' section.

- -

## Net interest margin (APM)<sup>1</sup>

The net interest income of the banking activities (one of the most important sources of revenue for the group) relative to the average total interest-bearing assets of the banking activities. The net interest income of the banking activities excludes dealing rooms and the net interest impact of ALM FX swaps and repos.

Consolidated income statement and Consolidated balance sheet

A: Net interest income of the banking activities	5 063	4 812
B: Average interest-bearing assets of the banking activities	238 600	231 869
A/B x 360/number of calendar days	2.09%	2.05%

## Net stable funding ratio (NSFR)

The bank's structural liquidity position in the long term, more specifically the extent to which the group is able to overcome liquidity difficulties over a one-year period.

Regulation (EU) 2019/876 of 20-05-2019

A: Available amount of stable funding	221 939	208 412
B: Required amount of stable funding	159 835	153 372
A/B	139%	136%

## Parent shareholders' equity per share (APM)

The carrying value of a KBC share, i.e. the value in euros represented by each share in the parent shareholders' equity of KBC.

Consolidated balance sheet and Note 5.10

A: Parent shareholders' equity	22 447	22 010
B: Number of ordinary shares less treasury shares (in millions)	397	409
A/B (in EUR)	56.6	53.9

## Return on equity (APM)

The relative profitability of the group, more specifically the ratio of the net result to equity.

Consolidated income statement and Consolidated statement of changes in equity

A: Result after tax, attributable to equity holders of the parent	3 415	3 402
B: Coupon on AT1 instruments (-)	-84	-64
C: Average parent shareholders' equity	22 228	21 164
(A+B)/C	15%	16%

### Total assets under management (APM, in billions of EUR)

These consist of direct client money (Assets under Distribution for retail, private banking and institutional clients), group assets (including pension funds), funds-of-funds assets and assets under advisory management. They comprise assets managed by the group's various asset management companies and assets under advisory management at KBC Bank. The size and development of total assets under management are major factors behind net fee and commission income (generating entry and management fees). Amounts are stated in billions of EUR.

-	A: Belgium Business Unit	245.3	217.9
	B: Czech Republic Business Unit	19.4	17.4
	C: International Markets Business Unit	10.9	9.1
	A+B+C (in billions of EUR)	275.6	244.4
	Of which		
	Direct client money (Assets under Distribution)	115.3	100.4
	Investment advice	62.4	55.2
	Funds of funds	76.7	68.3
	Group assets, including pension funds	21.2	20.6

1 We also use the same methodology to calculate these ratios for each business unit.

2 The exceptional and/or non-operational costs in 2024 included the integration expenses and euro adoption costs connected with the acquisition of Raiffeisenbank Bulgaria, and the exceptional bank and insurance taxes in Hungary (in 2023, this included costs relating to the exceptional bank taxes in Hungary, the integration expenses and euro adoption costs connected with the acquisition of Raiffeisenbank Bulgaria, and costs relating to the sale transactions in Ireland). The exceptional and/or non-operational income in 2024 included the mark-to-market valuation of ALM derivatives, and a one-off item in Hungary (in 2023, this included income relating to the gain on the finalisation of the sale transactions in Ireland, recovery of past bank taxes in Belgium, various smaller items, and the mark-to-market valuation of ALM derivatives).

3 We also calculated a ratio excluding the (changes in the) reserve for geopolitical and macroeconomic uncertainties, which came to 0.16% in 2024 and 0.07% in 2023.

# EU Taxonomy– detailed tables

The mandatory EU Taxonomy reporting tables are provided on the next few pages.

In addition, voluntary reporting tables are provided in our Sustainability Report.

Abbreviations used:

- Capex: capital expenditure
- GAR: green assets ratio
- UoP: use of proceeds
- NFC: non-financial counterparties
- N/A: not applicable

## KBC as a credit institution – summary of KPIs to be disclosed by credit institutions under Article 8 Taxonomy Regulation

Main KPI	Total environmentally sustainable assets (in millions of EUR or %)	KPI (Turnover based)	KPI (Capex based)	% coverage (over total assets)	% of assets excluded from the numerator of the G-R (Article 7(2) and (3) and Section 1.1.2 of Annex VI)***	% of assets excluded from the denominator of the G-R (Article 7(1) and Section 1.2.4 of Annex VI)****	% of assets excluded from the denominator of the G-R (Article 7(1) and Section 1.2.4 of Annex VI)*****
<b>Green asset ratio (G-R) stock</b>	<b>1 028</b>	<b>0.5%</b>	<b>0.4%</b>	<b>61.8%</b>	<b>35.3%</b>	<b>38.2%</b>	<b>25.0%</b>
Additional KPIs							
G-R flow* <sup>**</sup>	390	0.9%	0.6%	75.0%	N/A	N/A	N/A
Trading book* <sup>**</sup>	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Financial guarantees	159	1.4%	2.2%	N/A	N/A	N/A	N/A
Assets under management***	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Fees and Commission income***	N/A	N/A	N/A	N/A	N/A	N/A	N/A

\* The EU taxonomy flow figures for our Belgian portfolio were estimated on a pro rata basis, starting from the KPI stock templates. This approximation leads to an overestimation of the figures in the range of 10% - 20% for certain asset classes.

\*\* Additional KPIs related to Trading book and Fees and Commission income only apply starting 2026

\*\*\* Assets under management are as from 2025 reported in the specific templates foreseen for asset managers

\*\*\*\* The numerator does not take into account assets excluded from taxonomy calculation (updated interpretation vs the annual report of 2023)

## KBC as a credit institution – assets for the calculation of GAR (Turnover based) – PART 1

GAR – Covered assets in both numerator and denominator  (in millions of EUR)	Total (gross) carrying amount	Climate Change Mitigation (CCM)			Climate Change Adaptation (CCA)			Water and marine resources (WTR)			Circular economy (CE)							
		Of which towards taxonomy-relevant sectors (Taxonomy-eligible)			Of which towards taxonomy-relevant sectors (Taxonomy-eligible)			Of which towards taxonomy-relevant sectors (Taxonomy-eligible)			Of which towards taxonomy-relevant sectors (Taxonomy-eligible)							
		Of which environmentally sustainable (Economy-aligned)		Of which enabling	Of which environmentally sustainable (Economy-aligned)		Of which enabling	Of which environmentally sustainable (Economy-aligned)		Of which enabling	Of which environmentally sustainable (Economy-aligned)		Of which enabling

\* Denominator per line item except for proportion of assets covered (vs total flow assets)  
The EU Taxonomy flow figures for our Belgian portfolio were estimated on a pro rata basis, starting from the KPI stock templates. This approximation leads to an overestimation of the figures in the range of 10% - 20% for certain asset classes.

## KBC as a credit institution – nuclear and fossil gas related activities (further referred to as 'template 1')

NUCLEAR ENERGY RELATED ACTIVITIES		
1	The undertaking carries out, funds or has exposures to research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.	NO
2	The undertaking carries out, funds or has exposures to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	YES
3	The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	YES
FOSSIL GAS RELATED ACTIVITIES		
4	The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	YES
5	The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	YES
6	The undertaking carries out, funds or has exposures to construction, refurbishment and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels.	YES
